Overview

Simply put, Appointment Booking Pro allows a visitor to your web site to book a resource for a specific period of time. It has many features and many ways to set up screens and capture user data, but ultimately it is just there to book a resource.

It does not do much, but it does it quite well.

Terms and concepts

Resources

The 'Resource' is what is being booked or reserved.

A resource can be anything you want, a room (meeting room, exercise room, etc), a person (doctor, hair stylist, etc) or an object (computer, golf clubs, Ferrari)

The resources will appear in a dropdown list for you visitor to choose. If you only have one resource it will be preselected when the visitor opens the booking screen.

Categories

Categories were added for people who have too many resources to fit into a dropdown list.

They can also be used to group resources, for example by physical location – Calgary Office, Toronto Office, etc.

It is important to remember that categories are just way to group resources and make them easier to locate in the booking screen. You do not 'book' a category, you book a resource.

A resource can one belong to only one category. As of ABPro 2.0.3 beta 4, a resource can be assigned to multiple categories.

Categories are **optional** and should not be used unless there is a business reason to do so.

Services

Services were added as an attribute to a resource; a way for you to give the visitor a specific list of tasks that they can request of the resource.

You do not 'book' a service, you book a resource. The service just specifies what you want the resource to do.

A resource can have any number of services.

Services have no effect on the time duration of a booking.

Services are **optional** and should not be used unless there is a business reason to do so.

Timeslots

A resource booking needs a start and end time. Timeslots provide you a way to define blocks of time that a user can chose to book.

The difference between Appointment Booking Pro (ABPro) and its sister component Resource Booking Pro (RBPro) is in **who** decides when the booking ends.

With ABPro, you define a start and end time for timeslots – you tell the visitor when the booking ends.

With RBPro, the visitor tells you when the booking will end.

You can define any number of timeslots. A timeslot can be any size, in minutes. Smaller than 10 minutes is not recommended.

A resource can use 'Global' timeslots, timeslots you have defined as 'Global', or the resource can be set to use resource specific timeslots. In this case you define slots just for a specific resource, independent of other resources or of Global timeslots.

Timeslots give you great flexibility in when your resources are available. You can set no slots from noon to 1:00 each day for lunch, set none for after 3:00 on Fridays, etc.

What you **cannot** do is have overlapping slots. For example you **cannot** have 1 hour timeslots that begin every half hour.

The system comes with Global timeslots defined for Monday to Friday. These are just to get you started and can be modified or deleted.

Book-offs

Book-offs are used to make a resource unavailable on one or more specific dates. These would be used for vacation days, statutory holidays, etc.

In the resource setup screen you can define which days-of-the-week your resource is available, for example Monday-Friday. Book-offs are used for specific dates.

Seats

ABPro was originally designed for individuals to book appointments. With version 1.4.3 the concept of 'seats per booking' was added. You can set 'maximum seats' for a resource (normally 1 for individual appointments) and customers can select how many seats they want to book. This allows ABPro to be used for booking seats in a class or on a tour.

Coupons

Added in version 1.4.3, you can define any number of coupon codes. You set the discount amount, either currency or percentage of total order, and an expiry date. You can give this to prospective customers and the total changes will be adjusted when they enter the coupon code into the coupon box on the booking screen.

Extras

Added in version 1.4.4, you can define any number of extra items that the user can add to a booking. These 'Extras' can have a cost associated with them and the booking total will be adjusted based on the user's choices.

UDFs

ABPro supports an unlimited number of User Defined Fields or UDFs.

UDFs are fields that you can place on the booking screen to gather additional information from the visitor. ABPro supports the following types of UDFs, textbox, radio button, dropdown list and text area.

You can specify some types of UDFs as required fields so the visitor must fill them in before making a booking.

UDF data cannot be changed. You can see what the visitor entered but you cannot change it.

Resource Administrator

You can assign any user or users to be a resource administrator. A resource administrator can access front end admin screens to manage the administration for their resources. The front end admin screens have limited functionality but

allow the resource administrator to handle day to day tasks without needing to have access to the Joomla administrator back end.

User Credit

User Credit is a number, representing a currency amount, associated with a registered user. You can sell your customer user credits OUTSIDE of ABPro then enter their number of credits into ABPro. Now when they go to make a booking, the cost of the booking is deducted from their credits.

Conventions used in this guide

Visitors making appointment bookings will be referred to as **customers** or **visitors**.

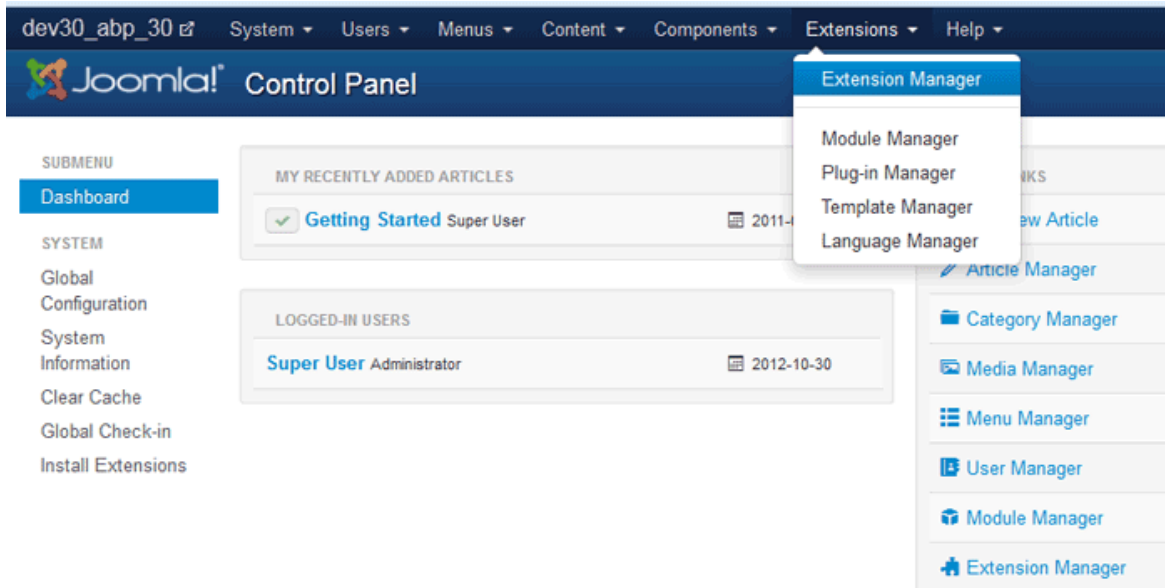

I realize ABPro is often used in a medical environment where they are 'patients' – no disrespect intended ;-)

Screen Shots will be Joomla 1.5 unless the feature being discussed is specific to Joomla 1.6+.

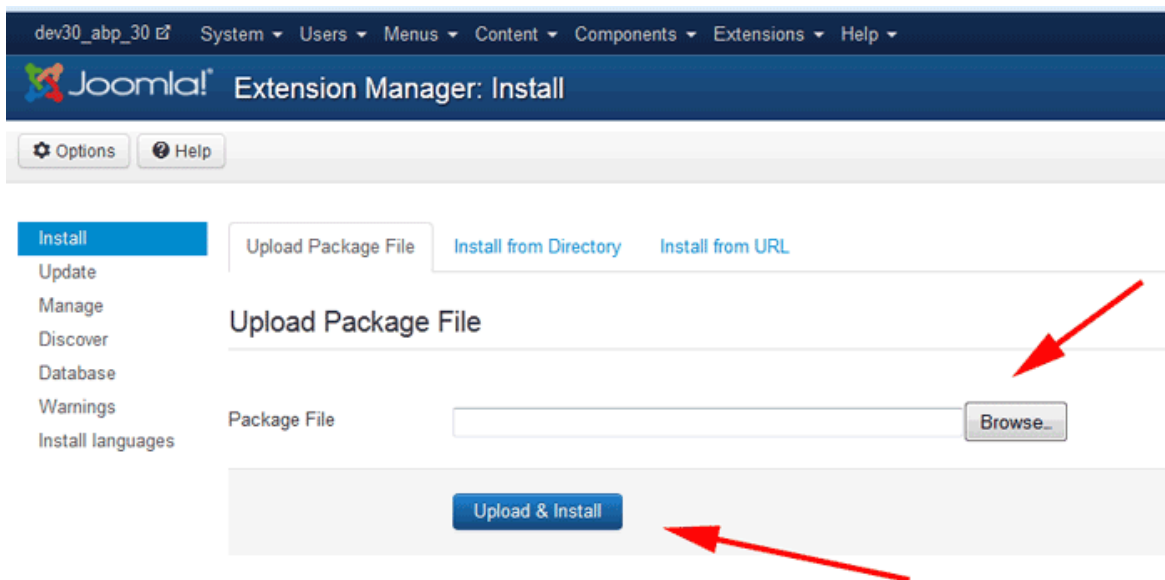

The term Joomla 1.6+ indicates Joomla 1.6 and above.

Installation

ABPro is a native Joomla 3.0 component and will not run under previous versions of Joomla.
The installation procedure is standard Joomla stuff...

Browse to find the zip file you downloaded from appointmentbookingpro.com
Then upload and install.

Appointment Booking Pro system for Joomla 3.0.x

This version of ABPro is not compatible with versions of Joomla prior to 3.0.
[Version 3.0 \(alpha 3 Oct 22/12\)](#)

New in version 3.0 ..

- Support for Joomla 3.0

**** Note 1: If you are upgrading from 2.0.1 or lower you MUST open _each_ resource and 'Save' it to switch the access level from the old system to the new Groups based one. Otherwise your resource will not be visible to the public. ***
**** Note 2: If you are upgrading from pre 2.0.3, beta 4 AND you are using Categories, you will need to re-assign resources to categories to support the new resource-category relationship. ****

You are done.

Setup

Getting Started

You might want to just look through the menus and screens to get a feel for how things are laid out. Each screen has a help icon that will bring up some help on the current screen.

Minimum setup – Quick Start

Ok, you have ABPro installed, now what.

The Plan..

ABPro has a lot of settings - **Start simple.**

On a clean install, create a new resource, leaving everything defaulted (well except the resource name) and set published = Yes.

Make a menu to call the booking screen and open it. You will see your resource and all the slots.

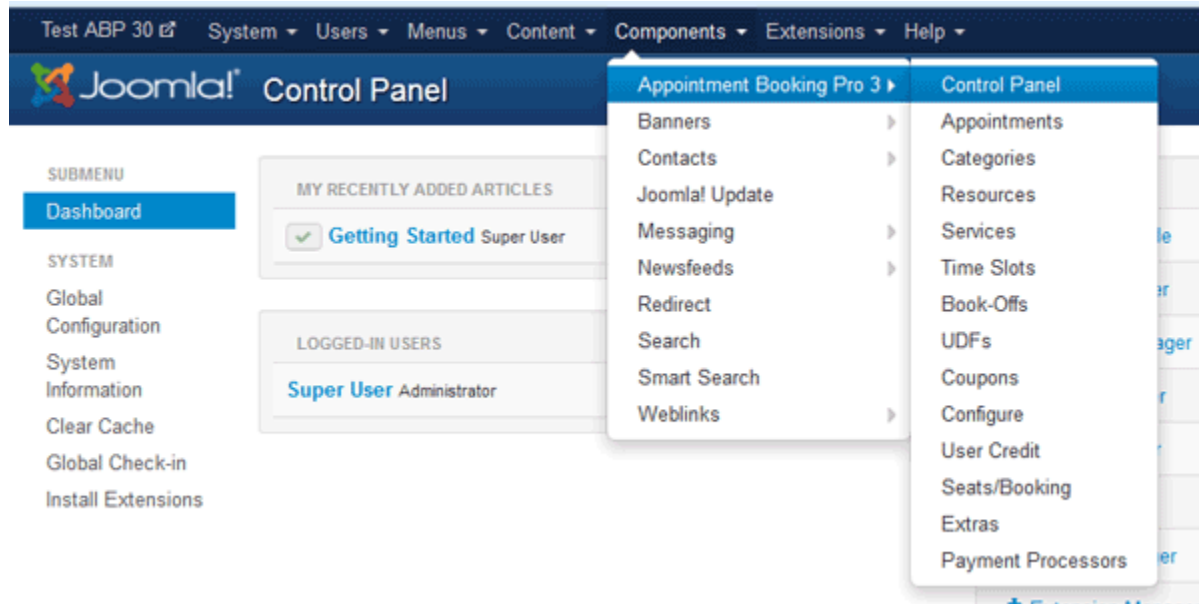

Don't enable Google calendar or any other options until you are comfortable that the core ABPro functionality is there.

Leave Auto-Accept = Yes and make a booking.

Once you know it is working you can start making changes. If you want a different timeslot, change the start/end times for one of the included ones and verify it is changed to what you want.

Once your slots are there and bookings are going in ok, enable Google Calendar, add your settings, and make another booking. Login to Google and look at your calendar to see the booking is there.

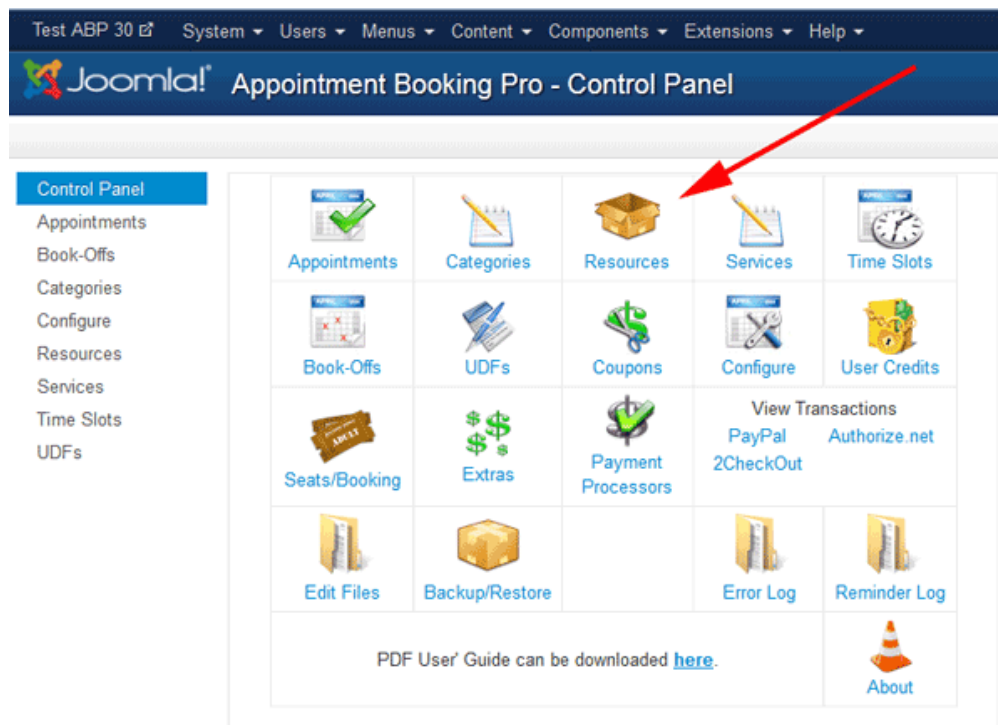

Ok, let's go to the ABPro control panel..

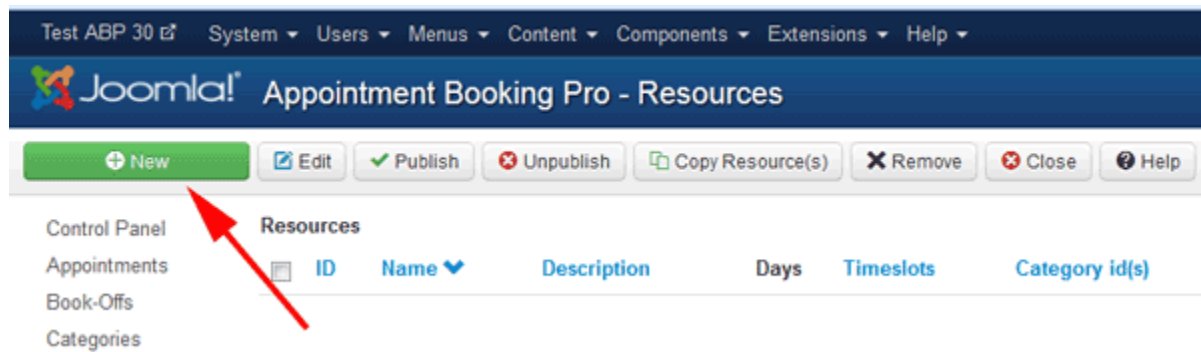

The bare minimum you need before you can try out the booking screens is something to book.

You need to add a resource.

Select the Resources item

The select 'New' button to open the Resource Edit screen.

The Resource Detail screen is one of the busiest in the system but don't worry, for now just enter a name and description. The description is what will be shown in the booking screen. Click on *Save & Close* to save the new resource.

The screenshot shows the 'ABPro - Resource Detail: [NEW]' screen. At the top, there's a navigation bar with links like 'Test ABP 30', 'System', 'Users', 'Menus', 'Content', 'Components', 'Extensions', and 'Help'. Below this is a header with the Joomla! logo and the title 'ABPro - Resource Detail: [NEW]'. A toolbar contains buttons: 'Save & Close' (highlighted with a red arrow), 'Cancel', and 'Help'. Below the toolbar, there's a text area with the instruction: 'A resource is who or what the appointment is being made for. For example, an appointment to visit **doctor** or test drive a **car**. The resource would be the doctor or the car.' Below this, there are input fields for 'Resource ID' (value: 0), 'Name' (value: Mr Smith), and 'Description' (value: Mr Smith description). There are red arrows pointing to the 'Name' and 'Description' fields. Below these fields, there's a dropdown menu for 'Auto-Accept Bookings' (value: Use Global) and a text area with the instruction: 'If set to Yes, new bookings will s automatically to 'Accepted' status level setting. Set to Global to use'. The 'Save & Close' button is highlighted with a red arrow.

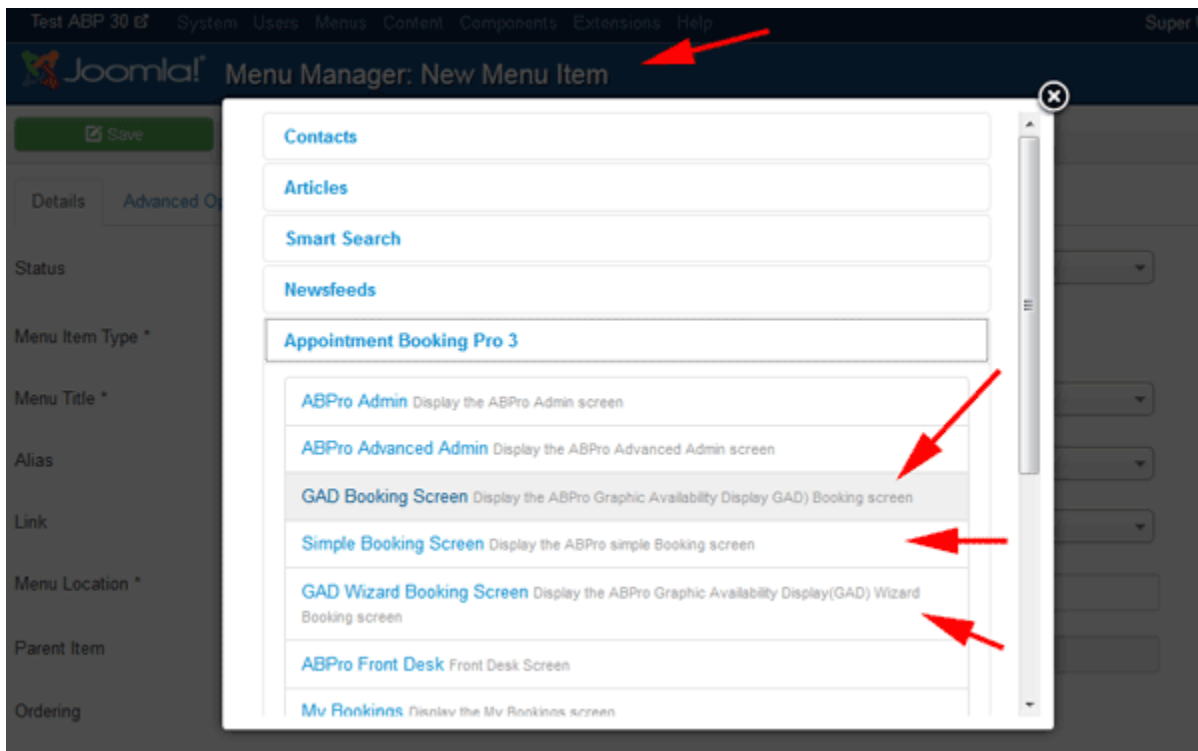

The screenshot shows the Joomla! Appointment Booking Pro - Resources interface after saving a new resource. At the top, there's a navigation bar with links like 'Test ABP 30', 'System', 'Users', 'Menus', 'Content', 'Components', 'Extensions', and 'Help'. Below this is a header with the Joomla! logo and the title 'Appointment Booking Pro - Resources'. A toolbar contains buttons: '+ New', 'Edit', 'Publish', 'Unpublish', 'Copy Resource(s)', 'Remove', 'Close', and 'Help'. On the left, a sidebar menu lists 'Control Panel', 'Appointments', 'Book-Offs', 'Categories', 'Configure', 'Resources' (highlighted), 'Services', 'Time Slots', and 'UDFs'. The main content area shows a message box with the text 'Message Save Completed'. Below the message, there's a table with columns: 'ID', 'Name', 'Description', 'Days', 'Timeslots', 'Category id(s)', 'Order', and 'Published'. The table contains one row with the following data:

ID	Name	Description	Days	Timeslots	Category id(s)	Order	Published
1	Mr Smith	Mr Smith description	Sun Mon Tue Wed Thu Fri Sat	Global		1	<input checked="" type="checkbox"/>

That gives us a Resource so we can now map a booking screen to a menu item and try it out.

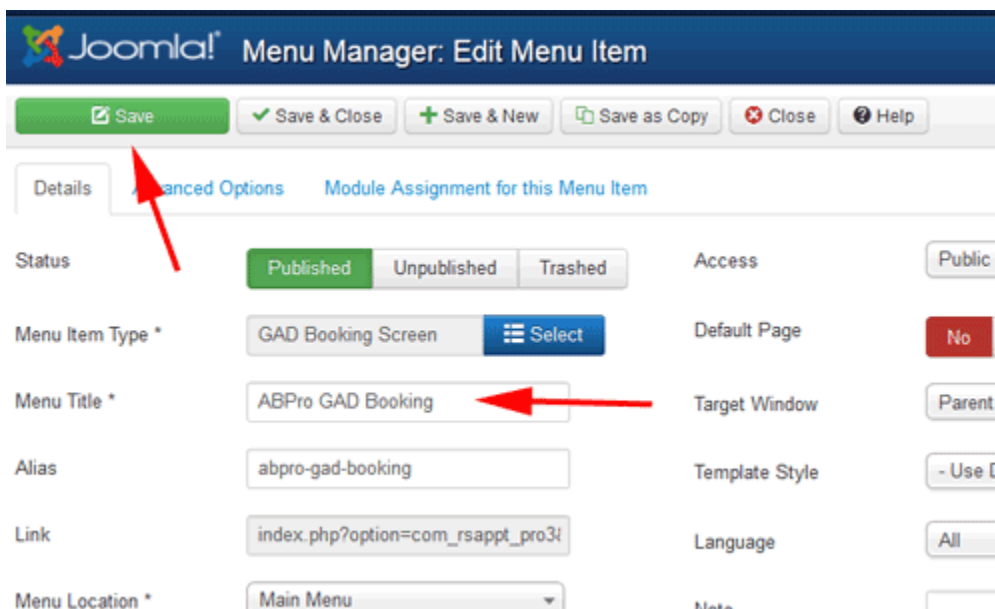

Go to the Joomla menu system and add a new Main Menu item.

You have three choices for booking screens, simple 'Booking Screen' the Graphic Availability Display or 'GAD Booking Screen' or the Wizard style.

The GAD Booking screen has a grid displaying timeslots. Let's use that one.

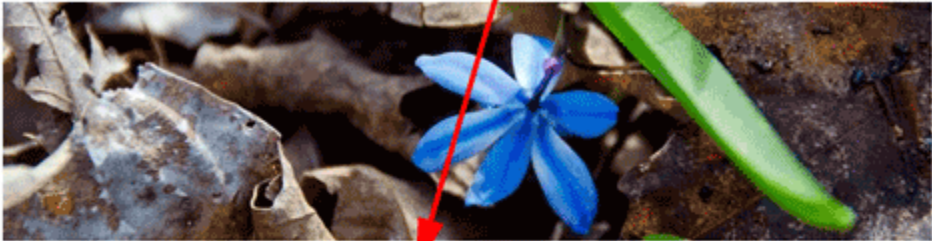

Enter a title for the menu item then save.

And here it is..

The Control Panel

The back end administrator menu is where all setup and management is done.

There are also several front end Administrator screens but these are for designated resource administrators (staff) to use and are limited in functionality.

As a rule there will always be a list screen and a detail. For example; a list of appointments, then click on a link to access the details of a specific appointment.

Some exceptions are screens like Configure, Backup/Restore etc., where the list-detail idea does not apply.

There is a **Help** button at the top right of each screen with brief help information about the screen.

This is the master list of appointments in the system.

The Appointments screen lists all appointments in the system. It has several filters to help manage a large list.

Toolbar Icons

Thank You: You can send an email message after the booking has taken place. This could be used as a 'Thank You' or a 'Time to re-book' message. When used with the optional cron module, you can send this message much after like eleven months after an annual appointment to remind the customer to book again.

SMS Reminders: You can also send SMS text message reminders to users. (message text defined in the configure screen). Use the Date filter to choose a date then select bookings to receive reminders. Reminders will only be sent to bookings in the future, that are in 'Accepted' status.

Export/CSV: Exports request details for one or more Appointments to a csv file. The csv file can be read into Excel for reporting purposes.

Export/ICS: Exports request details for one or more Appointments to an ics file. The ics file can be emailed to Outlook and the selected appointments will be added to the Outlook calendar. Note this is a one-way operation. Changes made in Outlook will have NO EFFECT on ABPro.

Help: Opens this help screen.

Filters

Date: Filter by date, use the 'Clear Date' link to remove filter.

Category: Filter by Category

Resource: Filter by resource:

- *Show All* - Appointments for all resources.
- *name* - Choose a specific resource

Status: Filter by request status:

- *New* - a new request.
- *Pending*- when using PayPal a new booking goes in a pending and is changed to accepted status when PayPal sends back an ipn message saying payment is complete.
- *Accepted* - accepted request - resource is booked.
- *Declined* - admin refused the booking.
- *Cancelled* - Request was cancelled by admin.
- *No Show* – customer/patient did not show up for appointment
- *Attended* – customer/patient did show up for appointment
- *Deleted* – appointment deleted by customer/patient

List Area

Note: In the Configure screen you can turn some of the columns on/off as required for your specific business.

ID: Unique ID for the request.

Name: Requestor's name.

Email: Email address (if supplied) of the requestor, click on the address to send an email to the person.

Resource: Name of the Resource being booked.

Time: Date and time of the booking.

Seats: Seats booked.

Payment: Payment status of the booking.

Status: Request status (see filters above)

Click on the **Name link** to open the edit screen.

Click on the **Email** link to send an email mail message.

Appointment Detail

Access the appointment detail by clicking on the name in the appointment list screen.

The heart of the component is the Appointment Request.

This screen allows you to view and edit the details of a request or Appointment booking.

Toolbar Icons

Cancel: Abort changes and return to the previous screen.

Save: Save changes and return to the previous screen.

Help: Opens this help screen.

Edit Area

The edit area is divided into two sections; the top is the request as it came from the user. The lower section is an Admin area where the administrator decides what to do the request.

Name, Phone, Email: The top fields are self explanatory.

Use SMS: ABPro can send reminder messages via SMS text messaging. This feature requires an account with Clickatell.com. If you have SMS enabled (see configuration for setting up SMS) the booking screen will ask the customer if they want SMS reminder messages. This will so if they said Yes or No.

SMS Phone: If the customer wished SMS reminders, they enter a cell phone to receive them.

SMS Dial Code: If the site is being run in North America the dial code is 1 and that is the default for ABPro. If the site is being run elsewhere, the configuration area lets you set an alternate default dial code. If you are running in a part of the world where your customers may come from different dial codes, you can have a dropdown list of codes displayed for the customer to choose from.

Resource: The resource being booked.

Service: The service (optional) that the customer chose.

Date and Time: When the booking is for.

Booked Seats: This will be 1 unless 'seats per booking' is enabled by defining seat types.

User Defined Fields (UDFs): This area shows the values entered by the user for any UDFs you have defined. On the right shows the type of UDF and the label.

Extras: Extra charge items if enabled and chosen by the customer.

Below the UDFs is the Admin area.

Request Status: Used and an indicator for the administrator and also by the system if duplicate bookings are not allowed. Bookings with status of Accepted OR Pending will trigger a conflict message if Prevent Duplicate Bookings is set to Yes. Well, it is a bit more complicated than that as you *can* allow x number of duplicates, like x students booked into a class. See the resource setup screen for more details on duplicate booking options.

Payment Status: Change as required to indicate payment has been received. This can be set to be changed by PayPal when payment is completed.

Financial information: Charges and payments

Credit Used: If you are using the User Credit system, this will show is a credit was used to pay for this booking.

Coupon Used: If you have enabled coupons, this will show if the customer used a coupon code for the booking.

Administrator Comment: Administrator can enter an internal comment. Example: *'Phoned to confirmed new end time'*

Timestamp: read only, showing time request was entered.

If the booking was created or modified by a staff member, using the staff screens, their user id will appear in parenthesis beside the Timestamp label.

Categories

The screenshot shows the Joomla! Appointment Booking Pro - Categories management interface. At the top, there's a Joomla! logo and the title 'Appointment Booking Pro - Categories'. Below the title is a toolbar with buttons: '+ New', 'Edit', 'Publish', 'Unpublish', 'Delete', 'Close', and 'Help'. On the left is a sidebar menu with options: 'Control Panel', 'Appointments', 'Book-Offs', 'Categories' (highlighted), 'Configure', 'Resources', 'Services', 'Time Slots', and 'UDFs'. The main content area is titled 'Resource Categories' and contains explanatory text: 'Categories are OPTIONAL, to disable the use of Resource Categories, do not create any! If ANY Resource Categories are published, that will enable the use of Resource Categories on the booking screen. When enabled, ALL resources must be assigned to some category or they will not be displayed on the booking screen. See Help above for more information on when and why to use categories.' Below the text is a table listing the categories.

ID	Name	Description	Parent Category	Order	Published
1	Cat 1	Cat 1 desc		1	<input checked="" type="checkbox"/>
2	Cat 2	Cat2 Descr		2	<input checked="" type="checkbox"/>
4	Cat 3 with long name	Cat 3 desc		3	<input checked="" type="checkbox"/>
3	SUB_CAT_1	Sub Cat 1	Cat 1	4	<input checked="" type="checkbox"/>

The first thing to point out is that Categories are OPTIONAL - you **do not need** to set up any categories unless you feel they would help or be useful to you.

What is a Category?

A category is an arbitrarily defined entity that a resource can belong, or be assigned to. Categories sit above resources in the structure hierarchy.

Why use Categories?

Two reasons mainly;

1. You have too many resources to fit in the resource drop down list. With categories you can break the resources list into groups (or categories). The user first picks the category, then sees a smaller list of resources that you have assigned to the category.
2. Physical locations. If you have offices in two cities you can set up two categories and assign the resources in the appropriate category.

Hierarchy

Resource Category -> [optional subcategory] -> Resource -> Resource Service

Category: Cat 1

Resource: Select a Sub-Category

Coupon: Sub Cat 1
Sub Cat 2

Apply Coupon

Example:

Categories defined: Calgary Office, Edmonton Office

Resources:

Dr Foo - assigned Calgary Office

Dr Bar - assigned Edmonton Office

Mr Smith - assigned Edmonton Office

Mr Jones - assigned Calgary Office

Email:

Category: Select a Category

Resource:

Comment:

Email:

Category: Select a Category

Resource: Select a Category

Comment:

Calgary Office

Edmonton Office

Select a Resource Category

Email:

Category: Calgary Office

Resource: Select a Resource

Comment:

Select a Resource

Dr Foo

Mr Jones

What if Dr Foo works out of both offices?

He would no doubt **not** be in both locations at the same time. Make two resources called Dr Foo and assign one to each office. Each 'Dr Foo' will need its own available dates and times.

To **DISABLE** the use of Resource Categories, **do not create any!**

If ANY Resource Categories are published, that will enable the use of Resource Categories on the booking screen. When enabled, ALL resources must be assigned to some category or they will not be displayed on the booking screen.

Toolbar Icons

New: Opens the New Category screen to allow you to add a new category.

Edit: Opens the Category Edit screen to allow you to view and modify the category.

Publish: Sets one or more categories to Unpublished. Only Published categories will appear in the drop down list on the Appointment Booking screen.

Unpublish: Sets one or more categories to Unpublished so they will not show in the drop down list on the Appointment Booking screen.

Remove: Deletes one or more categories.

Help: Opens this help screen.

List Area

ID: Unique ID for the category.

Name: Category name.

Description: Category description, for internal use, does not appear on user screen anywhere.

Parent Category: ABPro supports 2 level hierarchy for categories. This column shows the parent category if there is one.

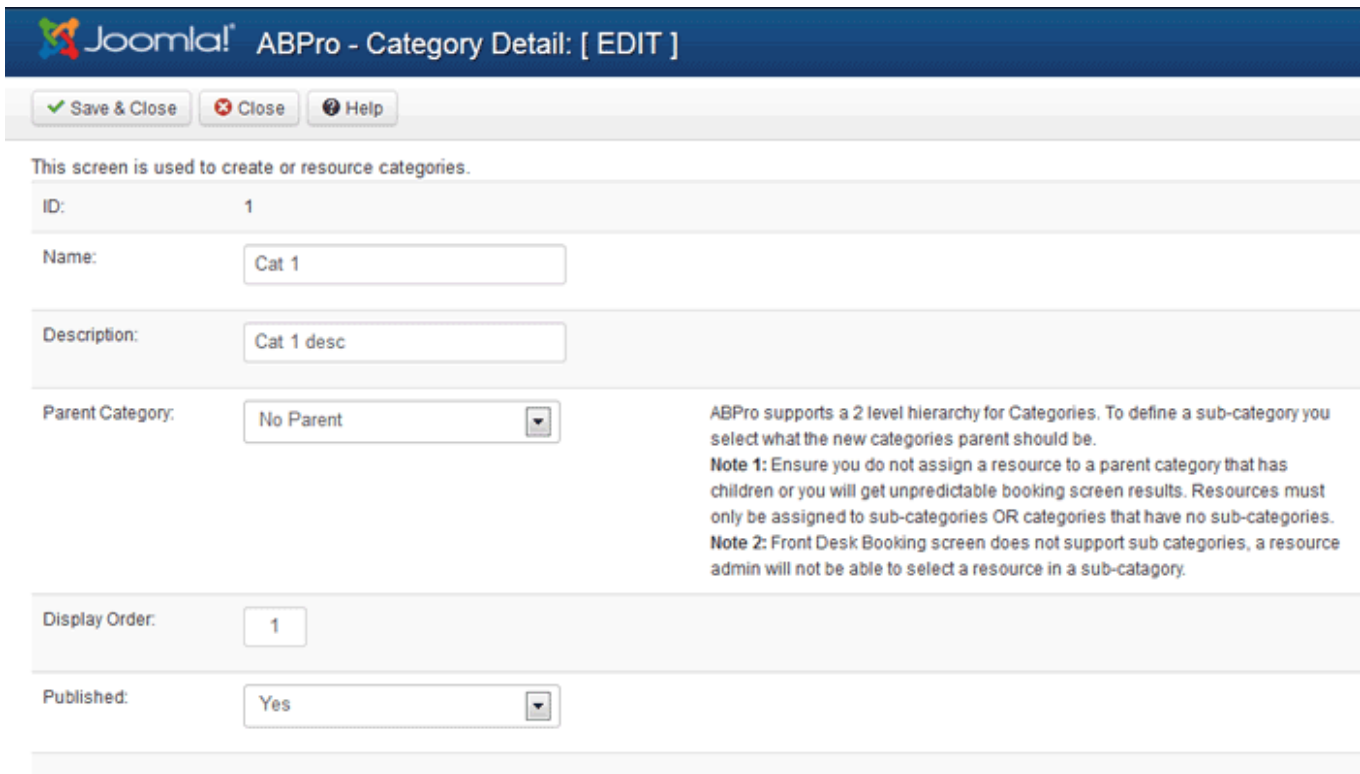

Display Order: Order the categories will appear in the Category drop down list.

Published: Indicates the published state.

Click on the **Name link** to open the edit screen.

Category Detail

A category is an arbitrarily define entity that a resource can belong, or be assigned to. Categories sit above resources in the structure hierarchy.

Joomla! ABPro - Category Detail: [EDIT]

Save & Close Close Help

This screen is used to create or resource categories.

ID: 1

Name: Cat 1

Description: Cat 1 desc

Parent Category: No Parent

Display Order: 1

Published: Yes

ABPro supports a 2 level hierarchy for Categories. To define a sub-category you select what the new categories parent should be.
Note 1: Ensure you do not assign a resource to a parent category that has children or you will get unpredictable booking screen results. Resources must only be assigned to sub-categories OR categories that have no sub-categories.
Note 2: Front Desk Booking screen does not support sub categories, a resource admin will not be able to select a resource in a sub-category.

Toolbar Icons

Cancel: Abort changes and return to the previous screen.

Save: Save changes and return to the previous screen.

Help: Opens this help screen.

Edit Area

Name: Name of the Category, this will appear in the drop down list on the Appointment Booking screen.

Description: For internal use only.

Parent Category: ABPro supports a 2 level hierarchy for Categories. To define a sub-category you select what the new categories parent should be.

Note: Ensure you do not assign a resource to a parent category that has children or you will get unpredictable booking screen results. *Resources must **only be assigned to sub-categories OR categories that have no sub-categories.***

Order: This determines the order this Category will appear in the Category drop down list on the Appointment Booking screen.

Published: Only categories with Published set to **Yes** will appear in the drop down list on the Appointment Booking screen.

Help

A resource is who or what the appointment is being made for.
For example, an appointment to visit **doctor** or test drive a **car**. The resource would be the doctor or the car.

Resource ID:	2
Name:	<input type="text" value="Dr Bar"/>
Description:	<input type="text" value="Dr Bar desc"/>
Auto-Accept Bookings:	<div>Use Global</div> <div>If set to Yes, new bookings will skip the New status and go automatically to 'Accepted' status. This will override the component level setting. Set to Global to use Config screen setting.</div>
Access	<div><div>ABPro Member</div><div>Add >></div><div><< Remove</div><div>Public</div></div> <div>You can set what Joomla user groups can see this resource. The default is 'Public' so everyone can see it. If you wish to restrict access to a resource to certain group(s) select them on the left. For example if you define a J1.6 group called 'Foo', and set this resource's Access to only 'Foo', only users assigned to group 'Foo' will see the resource.</div>
Category:	<div><div>Cat 1</div><div>Add >></div><div><< Remove</div><div></div></div> <div>[Optional] Resource Category. Left list shows all categories, right box shows categories this resource is assigned to. Note: Ensure you do not assign a resource to a parent category that has children or you will get unpredictable booking screen results. Resources must only be assigned to sub-categories OR parent categories that have no sub-categories.</div>
Mail Template	<div>Dr Bar</div> <div>Choose which mail template you want to use for this resource. New templates can be created in the message centre</div>
Cost:	<div>\$10 per hour + tax</div> <div>Cost is a free form text field so you can put things like '\$10/hr + \$20 deposit'. This appears in the resource dropdown list for the customer.</div>
Rate:	<div><div>10.00</div><div>Rate Unit:</div><div>per Hour</div></div> <div>Rate is used by the Payment Processor implementation. Rate is the amount you charge as a decimal number. This is used by the system to calculate total charge for PayPal. o per Hour = calculate costs as rate x hours o per Booking = flat rate charge per booking</div>
Deposit Required	<div></div> <div>If you enter an amount for a required deposit ABPro will only bill that</div>

Deposit Required	0.00	Fixed or Percent	Percent of Total	<p>If you enter an amount for a required deposit ABPro will only bill that amount to PayPal, Authnet or 2Checkout.</p> <p>0.00 = no deposit, full cost is billed PayPal et al.</p>
PayPal Account				<p>If this field is left blank, the component level PayPal account, set in Payment Processors screen - PayPal tab, will be used.</p>
Email to:	rob.stevens113@gmail.com			<p>To have notifications for this resource sent to one or more special email addresses, enter them here.</p> <p>Example: foo@bar.com,abc.xyz.com (use comma to separate multiple addresses)</p> <p>If this field is left blank resource requests will be sent to the address specified in the configuration section.</p>
SMS Phone:	403-370-0801			<p>To have SMS text message notifications sent to this resource enter a cell phone here (only one sms number supported). This feature requires a Clickatell, or ezTexting account be setup and configured. See the Configure screen Clickatell or ezTexting tab. Do not enter the country code.</p>
Maximum Seats	1			<p>This setting works with 'Seat Types'. If no Seat Types are defined a booking will be count as one seat and no 'seats' data entry box will be shown to the customer. If Seat Types are defined, a single booking can be for x number of seats. This setting specifies the maximum number of seats that can be booked before the timeslot is shown as unavailable.</p> <p>0 = unlimited.</p> <p>(Max Seats replaces the old 'Max Duplicates'.)</p>
Google Calendar Setup				
Client ID				Get this from your Google App Credentials page.
App Name	ABPro			This is the name of the App you create on Google. You need to create a Google 'App' so that ABPro is allowed to talk to your calendar(s)
App Email Address				Get this from your Google App Credentials page. You will also need to share your calendar to this email address.
P12 Key filename	2			This is the key file provided by Google and uploaded to your site.
Calendar ID:				This is obtained on the Google Calendar 'Calendar Settings' screen, Calendar Address section.
Resource Administrators:	<div> Jane Doe Add >> manager Super User << Remove </div>			<p>Select one or more users to be administrators for this resource. When a resource administrator accesses the front-end control they see only requests for their resources. A user can administer one or many resources and a resource can have one or many administrators.</p>

Time Slots:	<div>Use Global </div>	<p>Global = use 'Global' time slots</p> <p>Resource specific = this resource has it's own time slots defined. Use the Time Slots screen to set time slots. Note: Front end admin can ONLY see resource specific slots. A Resource admin cannot see/adjust Global slots</p>
Allow Booking on Days:	<div> <div>Sun Mon Tue Wed Thu Fri Sat</div> <div> <input type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> </div> </div>	<p>Un-check any days you wish to not show timeslots for, and to be disabled on the popup calendar. To block bookings on specific dates (eg: News Years day or holidays) use the Book-Offs tab.</p>
Hide non-Booking days:	<div>No </div>	<p>If set to Yes days unchecked above will not be displayed in the GAD grid. If set to No every day will be shown and non Booking days will be blank or can display a message - see next field. Note: this only effects the GAD booking screen in single-resource-multiple-days view.</p>
Non-Booking days message	<div>Closed Sundays nicht verfügbar</div>	<p>For days not checked above, you can display an optional message in the GAD grid for that day. Example:-- not available -- or *** My Day Off ;-) ***</p>
Minimum lead time:	<div>2 (hours)</div>	<p>Enter the minimum number of hours a person can book ahead. Example: set to 1 = someone can book an appointment for 1 hour from now, set to 24 and appointments less than 24 hours from now will be blocked. Normal setting is '0' with Disable Dates Before set to 'Tomorrow' means a visitor can book anytime tomorrow.</p>
Disable Dates Before:	<div> <div> <input type="radio"/> Today </div> <div> <input checked="" type="radio"/> Tomorrow </div> <div> <input type="radio"/> 3 days from now </div> <div> <input type="radio"/> Specific date: Tomorrow  </div> </div>	<p>Dates to disable on user's popup calendar and GAD grid.</p> <p>Today = Disable booking of dates earlier than today (allow current day booking)</p> <p>Tomorrow = Disable booking of dates earlier than tomorrow (normal setting)</p> <p>x days from now = no bookings sooner that x days from now.</p> <p>Specific date = disable booking of dates before the selected date</p>
Disable Dates After:	<div> <div> <input checked="" type="radio"/> Not Set </div> <div> <input type="radio"/> 1 days from now </div> <div> <input type="radio"/> Specific date: Not Set  </div> </div>	<p>Dates to disable on user's popup calendar and GAD grid.</p> <p>x days from now = no bookings beyond that x days from now.</p> <p>Not Set = allow bookings in the future with no limits (normal setting)</p> <p>Specific date = disable dates after the selected date</p>

Use the *Specific date* setting above when you want to allow bookings on ONLY certain dates, ex: appointments during a 3 day event. Disable dates before and after the

Force Gap:	<input type="text" value="0"/>	If you are using Service Based Duration and need to force a gap between bookings you can enter a number of minutes here. If you are not using Service Based Duration you should use timeslot definitions to create any gaps you require. Note: The <i>simple booking screen</i> will enforce on submit and does not have the granularity to force gaps smaller than one timeslot. Only use if Max Seats = 1 .
MailChimp List:	<input type="text" value="Use Global"/>	Select a MailChimp List for this resource
AcyMailing List:	<input type="text" value="Dr Bar List"/>	Select a AcyMailing List for this resource
Image:	<input type="text" value="abpro_resource_images/2.png"/>  Show in Grid <input type="text" value="No"/>	Image to display in the resource dropdown list. Requires ddSlick enabled in the Configure screen. Use the Joomla Media Manager to upload your images. Enter the image manager folder and filename here. Example 'abpro_resource_images/my_image.png' where you created a folder called <i>abpro_resource_images</i> for your images. Set Show in Grid to Yes if you wish to have the image displayed in the booking screen timeslot grid.
Image Text:	<input type="text" value="I'm Glad your came to see me!"/>	Text to display, with the image, in the resource dropdown list. Requires ddSlick enabled in the Configure screen.
Display Order:	<input type="text" value="2"/>	Enter a number to indicate what order this resource should appear in the dropdown list.
Published:	<input type="text" value="Yes"/>	

Appointment Booking Pro Ver. 3.0.6 - Copyright 2008-2015 - Soft Ventures, Inc.

Toolbar Icons

Cancel: Abort changes and return to the previous screen.

Save: Save changes and return to the previous screen.

Help: Opens this help screen.

Edit Area

Name: A resource must have a name. ex: 'Meeting Rom A' or 'Dr. Allan Harper.'

Description: The description is often just set to the name but can also include more information.

Auto-Accept Bookings: You can set auto-accept in the resource so some resources can accept immediately while others can require admin manual acceptance. Setting to 'Global' means the auto-accept is controlled by the setting in the component's configure screen.

Access: You can set what Joomla user groups can see this resource. The default is 'Public' so everyone can see it. If you wish to restrict access to a resource to certain group(s) select them on the left. For example if you define a Joomla group called 'Foo', and set this resource's Access to only 'Foo', only users assigned to group 'Foo' will see the resource.

Category: [Optional] Resource Category. Left list shows all categories, right box shows categories this resource is assigned to. You can assign a resource to 0, 1 or more than 1 category. See Resource Category setup screen for more details on when/why/how to use categories. If you publish **any** categories that enables the feature and **ALL** resources must then be assigned to one or more categories.

ABPro supports a 2 level hierarchy for Categories.

Note: Ensure you do not assign a resource to a parent category that has children or you will get unpredictable booking screen results. Resources must only be assigned to sub-categories OR parent categories that have no sub-categories.

Limitations for multi-resource-category:

- Native mobile apps, using Categories, will not work. Development has stopped on them so they will not be modified to support multiple categories for a resource.
- Front-end admin screen will show all categories to res-admins, not just categories with resources that they admin to.

Mail Template: 'Global' or resource specific can be selected. New templates can be created in the message centre. The mail template contains a message set which is all messages used by ABPro, except shopping cart messages as they cannot be resource specific.

Cost: Cost is a free form text field so you can put things like '\$10/hr + \$20 deposit'. This appears in the resource dropdown list for the customer.

Rate: Rate is used by the PayPal implementation. Rate is the amount you charge as a decimal number. This is used by the system to calculate total charge for PayPal.

- per Hour = calculate costs as rate x hours
- per Booking = flat rate charge per booking

Early Booking Discount: You can use this setting to offer a discount for early booking. Service level discounts override resource level discounts. They are not additive. Early Booking Discounts must be **enabled in the Configure screen**. Cannot be used with coupons.

- Fixed amount discount = fixed dollar discount
- Percentage discount = discount is a percentage to the booking cost.

Days = number of days in advance the booking must be made to get the discount.

Deposit Required: If you enter an amount for a required deposit ABPro will **only** bill that amount to PayPal, Authnet or 2Checkout. The deposit can be either a **Fixed Amount** or a **Percent or Total** cost.

0.00 = no deposit, full cost is billed PayPal et al.

Cost Summary:

Resource Rate	Hours	Total Owning
\$ 10.52	1.00	\$ 10.52
Additional Fee:		1.23
Discount:		(0.00)
Total Owning:		\$ 11.75
Deposit Required:		\$ 2.50

PayPal Account: You can define a different PayPal account for each resource. If left blank the PayPal account set in the Configure screen will be used for all resources.

Email To: To have notifications for this resource sent to **one or more** special email addresses, enter them here. Example: foo@bar.com,abc.xyz.com (use comma to separate multiple addresses) If this field is left blank resource requests will be sent to the address specified in the configuration section. The resource level overrides the component level. If you set a notification address at the resource level, the component level is ignored, if you want both you will need to add both at the resource level.

SMS Phone: To have SMS text message notifications sent to this resource enter a cell phone here (only one supported). This feature requires a Clickatell account be setup and configured. See the Configure screen Clickatell tab. If this field is left empty, no SMS messages will be sent to the resource.

SMS notifications are sent, to the resource, on these events :

- New booking
- User cancel from front end
- Booking status change; [status any status] -> accepted, by admin or front-end admin.
- Booking status change; [status any status] -> cancelled, by admin or front-end admin.

Max Seats:

This setting works with 'Seat Types' (see Seat Types later in this guide). If no Seat Types are defined a booking will be counted as one seat and no 'seats' data entry box(s) will be shown to the customer. If Seat Types are defined, a single booking can be for x number of seats. This setting specifies the maximum number of seats that can be booked before the timeslot is shown as unavailable.

0 = unlimited.

(Max Seats replaces the old 'Max Duplicates'.)

Default Calendar Category: Enter a default calendar category for this resource. This is only applicable if you are using 'auto-accept' and a 3rd party calendar (JCalPro, not required for Google Calendar)

Resource Administrators: Select one or more users to be administrators for this resource. When a resource administrator accesses the front-end control they see only requests for their resources. A user can administer one or many resources and a resource can have one or many administrators.

Time Slots: Global = use 'Global' time slots, Resource specific = this resource has its own time slots defined. Use the Time Slots screen to set time slots.

Allow Booking on Days: Un-check any days of the week that the resource is NOT available for booking. For specific dates off, use Book-offs. See the Book-offs section of this guide for details.

Hide Non-Booking Days: If set to Yes, the GAD booking grid will not show non booking days (un-checked days above).

Non-Booking Days Message: If you do not *hide* non-booking days they will appear blank (no timeslots). If you would rather show a message enter text here.

Minimum lead time:** Enter the minimum number of hours a person can book ahead. This was added for sites allowing 'current day' booking.

Example: set to 1 = someone can book an appointment for 1 hour from now, set to 24 and attempts to book appointments less than 24 hours from now will be blocked.

Normal setting is '0' with Disable Dates Before set to 'Tomorrow' means a visitor can book anytime tomorrow.

Disable Dates Before:** Dates to disable on user's popup calendar and the GAD display.

- Today = Disable booking of dates earlier than today (allow current day booking)
- Tomorrow = Disable booking of dates earlier than tomorrow (normal setting)
- Specific date = disable booking of dates before the selected date

Disable Dates After:** Dates to disable on user's popup calendar and the GAD display.

- Not Set = allow bookings in the future with no limits (normal setting)
- Specific date = disable dates after the selected date

You can use the above two settings when you want to allow bookings on ONLY certain dates, ex: appointments during a 3 day event. Disable dates before and after the event so users can only book appointments during the event.

Leave as 'Tomorrow' and 'Not Set' for day to day appointment booking on an on-going basis.

Force Gap: If you are using Service Based Duration and need to force a gap between bookings you can enter a number of minutes here. If you are not using Service Based Duration you should use timeslot definitions to create any gaps you require. The simple booking screen will enforce on submit and does not have the granularity to force gaps smaller than one timeslot. Only use if Max Seats = 1.

MailChimp List: You can have ABPro add booking customers to a MailChimp mailing list. The settings for MailChimp are in the Email Marketing screen. You can override the list to be added to by resource here.

AcyMailing List: You can have ABPro add booking customers to an AcyMailing mailing list. The settings for AcyMailing are in the Email Marketing screen. You can override the list to be added to by resource here.

Image: Image to display in the resource dropdown list. Requires ddSlick enabled in the Configure screen. Use the Joomla Media Manager to upload your images. Enter the image manager folder and filename here.

Example `abpro_resource_images/my_image.png` where you created a folder called abpro_resource_images for your images. Set Show in Grid to Yes if you wish to have the image displayed in the booking screen timeslot grid.

Image Text: Text to display, with the image, in the resource dropdown list. Requires ddSlick enabled in the Configure screen.

Display Order: Enter a number to indicate what order this resource should appear in the dropdown list.

Published: Only resources with Published set to **Yes** will appear in the dropdown list on the Booking screen

** These settings do not change the Graphic Availability Display (GAD) booking screen grid but do effect the validation. That means a user may see a timeslot that shows as available but when they try to book it the validation may tell them there is not enough lead time.

Services

The first thing to point out is that Services are OPTIONAL - you **do not** need to set up any services unless you feel they would help or be useful to you.

What is a Service?

A Service is an arbitrarily define entity that can be associated with resource. Services sit below resources in the structure hierarchy.

Why use Services?

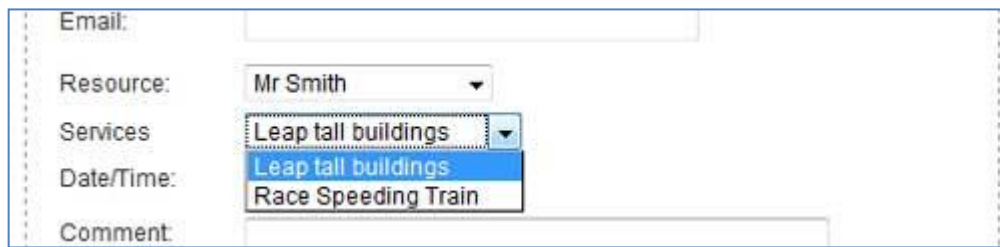

If your resource can be booked to perform multiple tasks. Creating services for a resource allows your user to choose the resource AND what service is to be performed. An example would be a staff member in a Spa, she can be booked to do various services, massage, manicure, etc.

Things to know about Services.

- You can create as many services as you wish for a resource. A service is specific to a resource but you can copy services to other resources. For example, if your Spa has three staff and all do massage, you can copy the 'massage' service to the other staff members (resources).
- Services and categories can be used together and have no real relation to one another.
- The service selected by the user will appear in the booking detail.
- A booking can only contain one service.

Hierarchy

Resource Category -> Resource -> **Resource Service**

A screenshot of a web form for selecting a service. The form has several fields: 'Email:' with an empty text box, 'Resource:' with a dropdown menu showing 'Mr Smith', 'Services' with a dropdown menu showing 'Leap tall buildings' and a list of two options: 'Leap tall buildings' and 'Race Speeding Train', 'Date/Time:' with an empty text box, and 'Comment:' with an empty text box. The 'Services' dropdown is open, showing the selected item and the list of available services.

Toolbar Icons

ID: Unique ID for the Service.

Name: Service name.

Description: Service description, for internal use, does not appear on user screen anywhere.

Resource: the resource this service is for.

Display Order: Order the services will appear in the Service drop down list.

Published: Indicates the published state.

Click on the **Name link** to open the edit screen.

Service Detail

A Service is an arbitrarily define entity that can be associated with resource. Services sit below resources in the structure hierarchy.

This screen is used to create or edit resource services.

ID:	19	
Resource:	Spa	
Service Name:	<input type="text" value="Massage"/>	
Description:	<input type="text" value="60 Minute Booking at \$15/hr"/>	
Service Rate:	<input type="text" value="15.00"/> Rate Unit: <input type="text" value="per Hour"/>	Rate is the amount you charge as a decimal number. This is used by the system to calculate total charge for PayPal. This rate, if set, overrides the resource rate. o per Hour = calculate costs as rate x hours o per Booking = flat rate charge per booking
Service Duration:	<input type="text" value="60"/> Rate Unit: <input type="text" value="Minutes"/>	The service duration will let you override the timeslot size for the length of the booking. Example: If the timeslot size is 60 minutes but you set a service duration of is 30 minutes, the end time of the booking will be forced to 30 minutes after the start time. Set to 0 to disable service duration for this service. NOTES: 1. Use with caution! If enabled, bookings are no longer constrained by timeslot boundaries and duplicate bookings are not supported as they depend on bookings matching timeslots. 2. ONLY works with GAD Booking screen 3. NOT compatible with Seats per Booking
Early Booking Discounts	<input type="text" value="0.00"/> <input type="text" value="Fixed amount discount"/> <input type="text" value="7"/> Days	Use this setting to offer a discount for early booking. Service level discounts override resource level discounts. They are not additive. Early Booking Discounts must be enabled in the Configure screen . Cannot be used with coupons.
Staff Only	<input type="text" value="No"/>	Yes = This service will only appear on the staff booking screen.
Image:	<input type="text" value="abpro_service_images/massage.png"/> 	Image to display in the service dropdown list. Requires ddSlick enabled in the Configure screen. Use the Joomla Media Manager to upload your images. Enter the image manager folder and filename here. Example 'abpro_service_images/my_image.png' where you created a folder called abpro_service_images for your images.
Image Text:	<input type="text" value="We know how to rub you the right way."/>	Text to display, with the image, in the service dropdown list. Requires ddSlick enabled in the Configure screen
Category	<input type="text" value="Calgary"/> <input type="button" value="Add >>"/> <input type="button" value=" << Remove"/>	Optional - Specify what category you wish this resource service to display with. Leave empty to display with any/all categories.
Display Order:	<input type="text" value="1"/>	
Published:	<input type="text" value="Yes"/>	

Toolbar Icons

Cancel: Abort changes and return to the previous screen.

Save: Save changes and return to the previous screen.

Help: Opens this help screen.

Edit Area

Resource: The resource this service will apply to.

Service Name: Name of the service, this will appear in the drop down list on the Appointment Booking screen.

Description: For internal use only.

Service Rate: Rate is used by the PayPal implementation. Rate is the amount you charge as a decimal number. This is used by the system to calculate total charge for PayPal. This rate, if set, overrides the resource rate.

Rate Unit:

- per Hour = calculate costs as rate x hours
- per Booking = flat rate charge per booking

Services Duration: The service duration will let you override the timeslot size for the length of the booking.

Example: If the timeslot size is 60 minutes but you set a service duration of is 30 minutes, the end time of the booking will be forced to 30 minutes after the start time.

Set to 0 to disable service duration for this service

Rate Unit:

- Minutes
- Hours

NOTES:

1. Use with caution! If enabled, bookings are **no longer constrained by timeslot boundaries** and some other features will no longer work (seats per booking for example)
2. **ONLY** works with **GAD Booking screen**

Early Booking Discounts: Use this setting to offer a discount for early booking. Service level discounts override resource level discounts, they are not additive. Early Booking Discounts must be enabled in the Configure screen and cannot be used with coupons.

Staff Only: Yes = This service will only appear on the staff booking screen.

Image: Image to display in the service dropdown list. Requires ddSlick enabled in the Configure screen. Use the Joomla Media Manager to upload your images. Enter the image manager folder and filename here.

Example ``abpro_service_images/my_image.png`` where you created a folder called `abpro_service_images` for your images.

Image Text: Text to display, with the image, in the service dropdown list. You can use only text if you do not want an image. Requires ddSlick enabled in the Configure screen

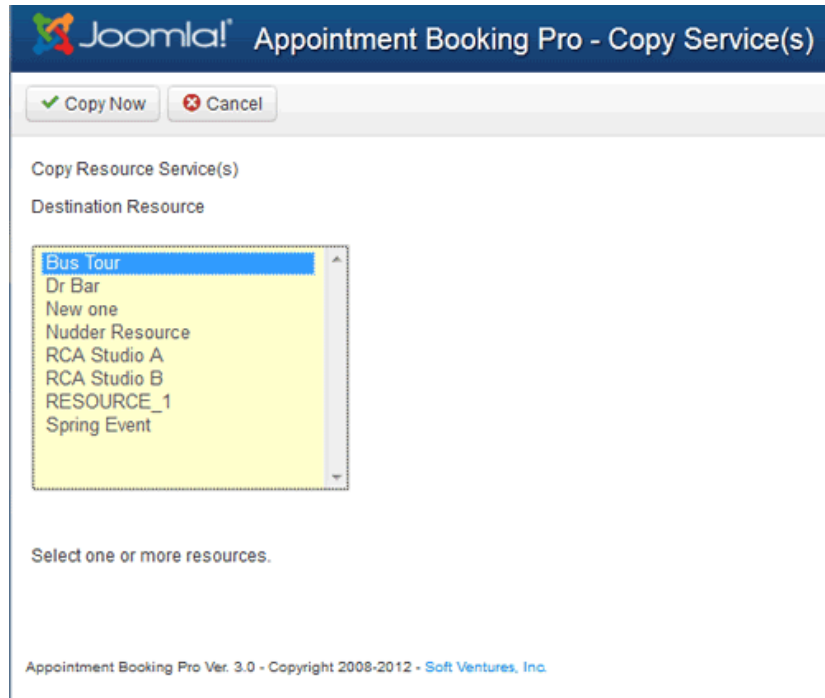

Category: Optional - Specify what category you wish this resource service to display with. Leave empty to display with any/all categories.

Order: This determines the order this service will appear in the service drop down list on the Appointment Booking screen.

Published: Only services with Published set to **Yes** will appear in the drop down list on the Appointment Booking screen.

Service Copy

You can copy a service from one resource to one or more others. Select a service in the service list, then click on Copy.

The screenshot shows a Joomla! interface window titled "Appointment Booking Pro - Copy Service(s)". At the top, there are two buttons: "Copy Now" (with a green checkmark icon) and "Cancel" (with a red X icon). Below the buttons, the text "Copy Resource Service(s)" is displayed. Underneath, the label "Destination Resource" is followed by a list box containing the following items: "Bus Tour" (highlighted in blue), "Dr Bar", "New one", "Nudder Resource", "RCA Studio A", "RCA Studio B", "RESOURCE_1", and "Spring Event". Below the list box, the text "Select one or more resources." is visible. At the bottom of the window, the footer text reads "Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - Soft Ventures, Inc."

Choose your destination resources for the copy, then click Copy Now.

Timeslots

A Time Slot is a block of time in the day that you wish to allow visitors to book. A day can have as many time slots as you like.

The Appointment Booking component stores a booking with a start and end date and time. The time slot just allows you to specify a fixed start/end that is easy for your visitor to choose.

Note: Changing a time slot has no effect on previously created bookings.

Timeslot Detail

A Time Slot is a block of time in the day that you wish to allow visitors to book an appointment. A day can have as many time slots as you like.

The Appointment Booking component stores a booking with a start and end date and time. The time slot just allows you to specify a fixed start/end that is easy for your visitor to choose.

Note: Changing a time slot has no effect on previously created bookings.

This screen is used to create or edit time slots.

Note: The system does no validation that the time slot you create is correct.

You must take care not to create overlapping time slots or slots with start time after end time.

ID:	172	
Resource:	<input type="text" value="Global"/>	(Resources with their 'time slots' set to 'Global' will not appear in this list)
Day:	<input type="text" value="Monday"/>	
Start:	<input type="text" value="16"/> : <input type="text" value="00"/> (hh:mm)	
End:	<input type="text" value="17"/> : <input type="text" value="00"/> (hh:mm)	
Description:	<input type="text"/>	The description is shown on the timeslot on the GAD booking screen. There is not much room so keep it brief. This would only be used if you need to provide special information about the timeslot, for example 'Morning Session'. If left blank, no description is shown and the green checkmark image is displayed.
Start Publishing:	<input type="text" value="0000-00-00"/> 	If left blank (or at 0000-00-00), published state is controlled by the Published yes/no setting. You can select a date to start publishing which work in conjunctions with the Published setting. That is the timeslot must have Published = Yes AND the date be on or after the start publishing date. Normally leave blank but if Start Publishing is set, End Publishing must be set also.
End Publishing:	<input type="text" value="0000-00-00"/> 	If left blank (or at 0000-00-00), published state is controlled by the Published yes/no setting. You can select a date to end publishing which work in conjunctions with the Published setting. That is the timeslot must have Published = Yes AND the date be on or before the end publishing date. Normally leave blank but if Start Publishing is set, End Publishing must be set also.
Staff Only:	<input type="text" value="No"/>	Yes = This timeslot will only appear on the staff booking screen. Do not define a staff timeslot that conflicts with or overlaps a non-staff slot. Used to allow staff to make bookings outside of the time public is allowed to book.
Published:	<input type="text" value="No"/>	

Toolbar Icons

Cancel: Abort changes and return to the previous screen.

Save: Save changes and return to the previous screen.

Help: Opens this help screen.

Edit Area

Resource: Select either 'Global' or a specific resource name. Resources with their 'time slots' set to 'Global' will not appear in this list.

Day: Choose the day you want this time slot to apply to.

Start: Select the **start time** for this time slot.

End: Select the **end time** for this time slot. Ensure the end time is after the start time.

Description: The description is shown on the timeslot on the GAD booking screen. If left blank, no description is shown, the green checkmark image is displayed.

There is not much room so keep it brief. This would **only be used** if you need to provide **special information** about the timeslot, for example 'Morning Session'.

Start Publishing: If left blank (or at 0000-00-00), published state is controlled by the **Published** yes/no setting. You can select a date to start publishing which work in conjunction with the Published setting. That is, the timeslot must have Published = Yes AND the date be on or after the start publishing date. This would be used if you want to have additional timeslots on specific dates. For example if you run a promotion and will be open late during a show so you want evening timeslots just for a few days you could define the publishing to only show them at that time.

End Publishing: If left blank (or at 0000-00-00), published state is controlled by the **Published** yes/no setting. You can select a date to end publishing which work in conjunction with the Published setting. That is, the timeslot must have Published = Yes AND the date be on or before the end publishing date

Staff Only: Yes = This timeslot will only appear on the staff booking screen. Do not define a staff timeslot that conflicts with or overlaps a non-staff slot. Used to allow staff to make bookings outside of the time public is allowed to book.

Published: Only time slots with Published set to **Yes** will appear in the dropdown list on the Resource Booking screen

Notes:

- Changes to time slots will have NO EFFECT on existing bookings.
- When checking for duplicate bookings, ABPro uses (starttime + 1 second) to (endtime -1 second) so adjacent slots can be set with **common end points**
Example: 9:00-**9:15** next slot can be **9:15**-9:20.
- Currently no support for time slots going past midnight.

New Timeslot

The Timeslot create screen has some extra fields not found on the Timeslot Edit screen.

Resource:	<input type="text" value="Global"/>	(Resources with their 'time slots' set to 'Global' will not appear in this list.)
Day:	<input type="text" value="Monday"/>	
Single or Series:		
<input checked="" type="radio"/> Single	Start: <input type="text" value="00"/> : <input type="text" value="00"/> (hh:mm) End: <input type="text" value="00"/> : <input type="text" value="00"/> (hh:mm)	Create a Single Timeslot only.
<input type="radio"/> Series	Range Start: <input type="text" value="00"/> : <input type="text" value="00"/> Range End: <input type="text" value="00"/> : <input type="text" value="00"/> Slot Duration: <input type="text" value="60"/> minutes	Create a Series of Timeslots of specified duration within the specified range of hours. These slots can then be copied to other days and/or resources via the Copy Timeslots feature. Example: Range: 8:00 - 17:00 Duration: 15 This will create consecutive 15 minutes slots between 8:00 and 17:00. Duration must be a number between 10 and 1440.
Delete before adding:	<input type="text" value="No"/>	Yes = Any existing slots, for this resource and day, will be deleted before the new one(s) are created. Existing bookings are not affected.
Un-Publish before adding:	<input type="text" value="No"/>	Yes = Any existing slots, for this resource and day, will be un-published before the new one(s) are created. Existing bookings are not affected.
Description:	<input type="text"/>	The description is shown on the timeslot on the GAD booking screen. There is not much room so keep it brief. This would only be used if you need to provide special information

Single or Series

You can create a single new timeslots or a series of slots from this screen.

Single: Set the start and end times for the slot.

Series: You can set a time range and duration and have ABPro create however many slots of the specified duration fit between the start and end times.

Example:

Range: 8:00 - 17:00

Duration: 15

This will create consecutive 15 minutes slots between 8:00 and 17:00.

Duration must be a number between 10 and 1440.

Delete before adding: Yes = Any existing slots, for this resource and day, will be deleted before the new one(s) are created. Existing bookings are not affected.

Un-Publish before adding: Yes = Any existing slots, for this resource and day, will be un-published before the new one(s) are created. Existing bookings are not affected.

Timeslot Copy

You can copy one or more timeslots to another day. This means you can setup one day's timeslots and copy them to any other days of the week you need. You can copy from Global to a specific resource or vice versa.

 **Appointment Booking Pro - Copy Time Slot(s)**

Copy Time Slot(s)

Check all days that wish the time slots copied to.

Set publish start date:

Set publish end date:

Leave empty to copy start/end publishing value from source timeslot.

Notes:

- Copying timeslots will have NO EFFECT on existing bookings.
- Resources with their 'time slots' set to 'Global' will NOT appear in the Resource list.
- You cannot copy multiple source days to multiple destination days. Each slot copied gets added to each of the destination days.

Book-Offs

A Book-Off is a **specific date or dates** that you do not want to allow bookings for a resource. Examples would be holidays, vacation days, etc. You can specify a range of hours if you do not want to book-off the full day.

For blocking **days of the week** (ie: only book Mon, Wed, Fri) - use Resource setup, Basic Setup tab, 'Allow Booking on Days'

Daily Book-Off	No	Book-offs are normally date specific. A daily book-off is a special case which ignores date and appears based on day of the week . This would typically be used for Lunch or a break time that you want to enforce every day. By creating a daily book-off you will prevent service based duration bookings from encroaching on your break time.
Date:	2015-03-27	
Full Day:	No	If Full Day = No , use the start/end times to determine the booking start and ending times. These times are ignored if you set Full Day = Yes.
Start:	00 : 00 (hh:mm)	You must set the bookoff range to match timeslot boundaries. For example if you have a timeslot that runs from 10:00-11:00 do not start your book-off at 10:30.
End:	00 : 00 (hh:mm)	This works by covering the timeslots with a non-clickable div. As such, the use of service based duration does not honor book-off hours ranges.
Description:	Boxing Day	Also, do not start or end a book-off range beyond your grid, if your day starts at 8:00AM, start your book-off range at 8:00AM not at 0:00.
Published:	Yes	Text entered here will be displayed in the book-off area on the GAD booking screen.

Daily Book-off: Book-offs are normally date specific. A daily book-off is a special case which ignores date and appears based on day of the week. This would typically be used for Lunch or a break time that you want to enforce every day. By creating a daily book-off you will prevent service based duration bookings from encroaching on your break time.

Date: Date for the Book-Off, use the popup calendar to choose a date.

Days: Which days to book-off when creating a series. For example, specify July 1-31 and day Wed, Fri will create Book-Offs on Wednesdays and Fridays between July 1-31.

Full Day & start/end: If Full Day = No, use the start/end times to determine the booking start and ending times. These

times are ignored if you set Full Day = Yes.

You must set the book-off range to match timeslot boundaries. For example if you have a timeslot that runs from 10:00-11:00 do not start your book-off at 10:30.

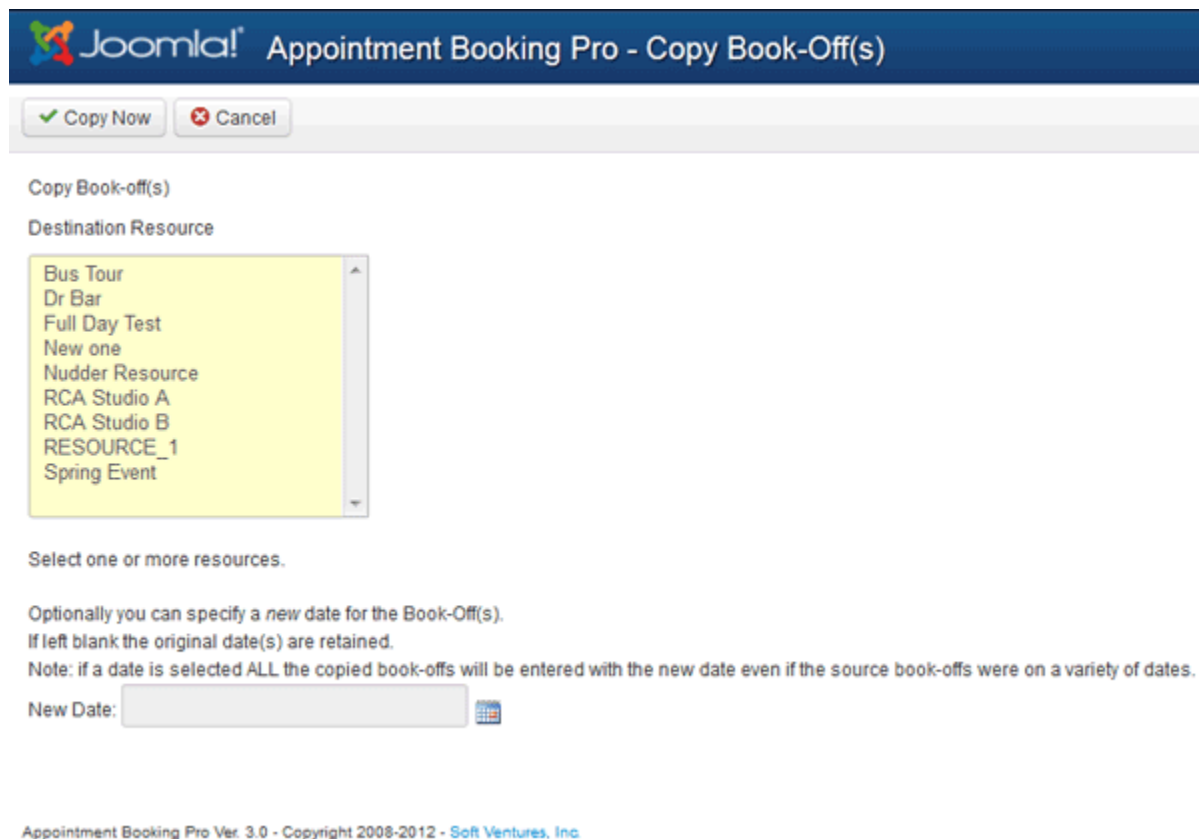

To: (only for add new) Book-offs are stored as individual dates, NOT date ranges. This screen will create a series of book-offs between two dates. To edit or remove the book-off you must deal with them as individual dates.

Description: Description of the book-off is for internal use only and is not shown to the public.

Published: Only Book-Offs with Published set to **Yes** will affect the popup calendar.

Copy Book-offs

You can copy a book-off from one resource to one or more others. In ABPro 2 you can also specify a new date. Select a book-off in the book-off list, then click on Copy.

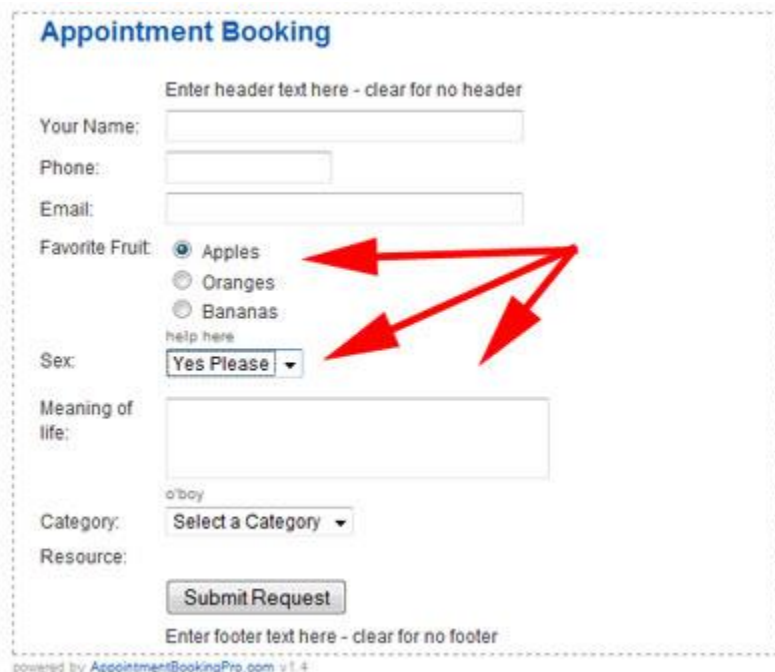

The screenshot shows the Joomla! Appointment Booking Pro interface for copying book-offs. At the top, there's a Joomla! logo and the title "Appointment Booking Pro - Copy Book-Off(s)". Below the title are two buttons: "Copy Now" (with a green checkmark) and "Cancel" (with a red X). The main section is titled "Copy Book-off(s)" and "Destination Resource". It features a list box containing the following resources: "Bus Tour", "Dr Bar", "Full Day Test", "New one", "Nudder Resource", "RCA Studio A", "RCA Studio B", "RESOURCE_1", and "Spring Event". Below the list box, it says "Select one or more resources." There is a note: "Optionally you can specify a new date for the Book-Off(s). If left blank the original date(s) are retained. Note: if a date is selected ALL the copied book-offs will be entered with the new date even if the source book-offs were on a variety of dates." Below this note is a "New Date:" label followed by a text input field and a calendar icon. At the bottom, there is a footer: "Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - Soft Ventures, Inc."

Choose your destination resources for the copy and click Copy Now.

UDFs

The UDF system within ABPro allows you to add any number of additional data entry fields to your booking screen. You can add textboxes, checkboxes, dropdown lists or radio buttons to your screen. The values entered by the user will be displayed in the appointment detail screen.

The screenshot shows a form titled "Appointment Booking" with the following fields and types:

- Header text: "Enter header text here - clear for no header"
- Your Name: Textbox
- Phone: Textbox
- Email: Textbox
- Favorite Fruit: Radio buttons (Apples, Oranges, Bananas) - Type: Radio
- Sex: Dropdown menu (Yes Please) - Type: List
- Meaning of life: Textarea
- Category: Dropdown menu (Select a Category) - Type: List
- Resource: Textbox
- Submit Request: Button
- Footer text: "Enter footer text here - clear for no footer"

Red arrows point to the Favorite Fruit, Sex, and Category fields, indicating they are UDFs.

Edit Area

Screen Label: The label for the UDF on the booking screen.

Type: Textbox, Textarea, List, Checkbox, Radio Button or Content.

Size: You can set the size that textboxes will be shown on the booking screen. The size of the textbox does not limit the amount of text that can be entered, just the on-screen size of the box. The max text allowed is 255 characters.

Rows: This will set the number of rows if the 'Type' is textarea. The size of the textbox does not limit the amount of text that can be entered. The max text allowed is 255 characters.

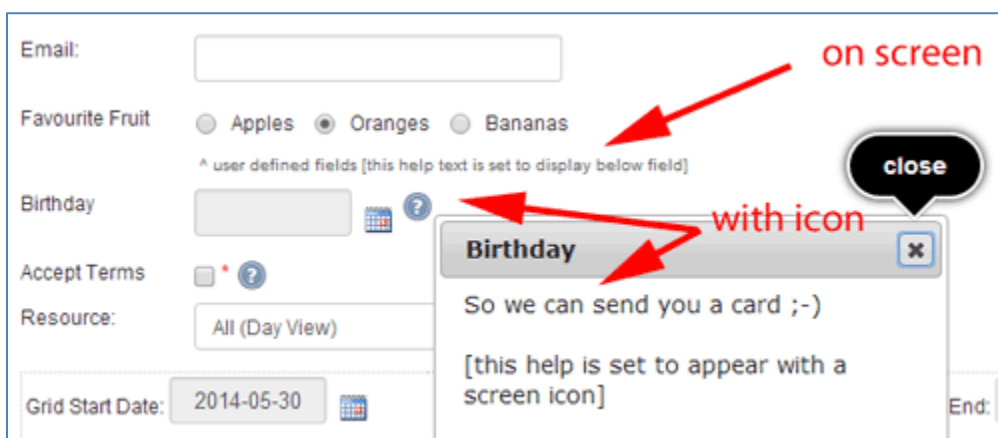

Columns: This will set the number of columns if the 'Type' is textarea. The size of the textbox does not limit the amount of text that can be entered. The max text allowed is 255 characters. For Radio type, this setting determines how many columns of radio buttons to display. Set to 1 for vertical display. Mobile always displays vertical.

Radio Buttons or List Items: Enter a comma separated list of words or phrases that are to be used as the radio button labels or listbox items. You can specify one to be initially selected by adding a "(d)" (to indicate default selection). Example: "Apples, (d)Oranges, Bananas", will open the booking screen with the Oranges selected.

Required Field: You can set any Textbox, or Textarea, UDFs to be a required field. This setting is ignored for non-Textbox/Textarea UDFs.

Help Text: You can define help text that will appear below the UDF on the booking screen. This is intended to assist the user in filling in the box.

Show help icon: If 'Show help icon' = Yes, a help icon will be displayed with your help text as a JQuery popup dialog. If set to No, the help text is displayed below the UDF.

Help format: If 'Help format' set to 'Text' means the box above contains the help text, if set to 'Link' it contains the link to an html page that will be loaded into the JQuery dialog.

Note the link must point to a simple HTML file, **not a Joomla content page** because the Joomla content page will mess up the JQuery already established in the booking screen.

Tooltip Text: You can define tooltip text that will appear when the user puts the mouse over the UDF on the booking screen.

Text for 'Content' UDF type: Unlike other UDFs the 'Content' type is for presenting information TO the customer. This can be used for common information like terms & conditions, or for resource specific information. HTML is allowed.

Show on Booking Screen: If set to No, this content will not show on the booking screen. This would be to show a message in the confirmation email or screen that does not appear on the booking screen. You can use the token system to include this text in your confirmation messages. See section 'Using UDFs' later in the guide for more detail.

Resources: By default UDFs show for all resources. You can set a UDF to only show for one or more specific resources.

For UDFs set to show for ALL resources, they appear above the resource dropdown, resource specific below.

Mapping to Community Builder, JomSocial or Joomla Profile Plug-in. See appropriate sections later in this guide.

Example 'Community Builder and ABPro'

The image shows a screenshot of an 'Appointment Booking' form. At the top, there's a header text field with the placeholder 'Enter header text here - clear for no header'. Below this are input fields for 'Your Name:', 'Phone:', 'Email:', 'Refreshments:' (with a hint '(ex: coffee for 101)'), and 'City:'. A 'Category:' dropdown is set to 'Calgary Office'. The 'Resource:' dropdown is set to 'Dr Foo'. Below the resource dropdown are radio buttons for 'Favorite Fruit' with options 'Apples' (selected), 'Oranges', and 'Bananas', and a 'help here' link. At the bottom, there's a 'Grid Start Date' of '2009-05-15' with a calendar icon, and 'Grid Start' and 'End' time selectors set to '8:00 AM' and '5:00 PM' respectively. A time slot grid shows slots from 8 AM to 4 PM. The first four slots (8 AM, 9 AM, 10 AM, 11 AM) are green with checkmarks, and the last two (3 PM, 4 PM) are also green with checkmarks. Red arrows point from text labels to specific parts of the form: 'UDFs for ALL resources' points to the 'Refreshments' and 'City' fields, and 'UDFs for specific resources' points to the 'Favorite Fruit' radio buttons.

To have a UDF show for a specific resource select the resource from the left list and 'Add' to the right.

This interface allows assigning a UDF to specific resources. It features a 'Resources:' dropdown currently showing 'Dr Foo'. To the right of the dropdown are 'Add >>' and '<< Remove' buttons. Further right is a list box containing 'Dr Foo' and an 'Empty = ALL' label. To the right of the list box is a text instruction: 'Select one or more resources that this UDF applies to. If you wish this UDF to be shown for ALL resources, do not select any.'

To have a UDF appear for ALL resources, do not 'Add' any.

Community Builder: You can map UDF textboxes to Community Builder profile data. See 'Community Builder and ABPro' for details.

JomSocial: You can map UDF textboxes to JomSocial profile data. See 'JomSocial and ABPro' for details.

Staff Only: Yes = This UDF will **only** appear in the staff (front desk) booking screen.

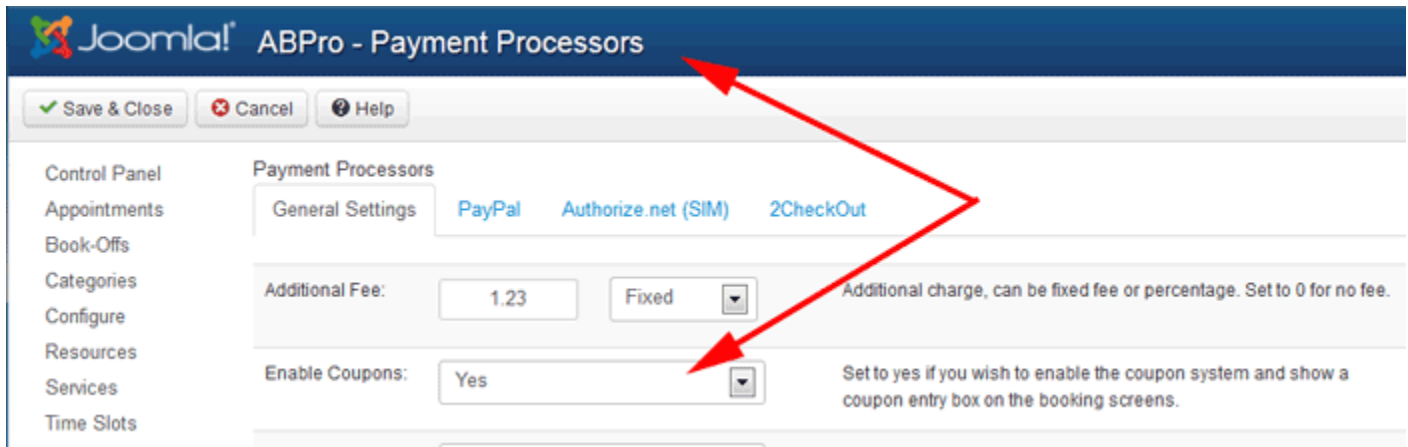

Order: The order in which the UDFs are presented on the booking screen.

Published: Only Published UDFs will appear in the booking screen.

Coupons

The coupon system allows you to create coupon codes, assign discount levels and expiry dates to them and give them to customers. With the coupon system enabled (done in the Payment Processors/General Settings screen) the booking screen will show a coupon entry box. When the customer enters a code, it is validated and the discount applied to the total cost.

Coupons are only meaningful when PayPal and/or Authorize.net is enabled.

General Settings PayPal Authorize.net (SIM) 2Checkout

Additional Fee: 1.23 Fixed Additional charge, can be fixed fee or percentage. Set to 0 for no fee.

Enable Coupons: Yes Set to yes if you wish to enable the coupon system and show a coupon entry box on the booking screens.

Coupon: 1234 Apply Coupon

10% off

Resource Rate	Hours	Total
\$ 20.00	1.00	\$ 20.00
Additional Fee:		1.00
Discount:		(2.10)
Total:		\$ 18.90

To offer a FREE booking set **Value = 100** and the **Type = Percent**.

If the booking total after discount is \$0, no trip to PayPal or Authorize.net is made and the booking is placed immediately.

The Booking detail will show a coupon code is one was used in the booking.

The Coupons screen is accessed via the **Coupons** control panel icon.

Toolbar Icons

New: Opens the New Coupon screen to allow you to add a new coupon.

Edit: Opens the Coupon Edit screen to allow you to view and modify the coupon.

Publish: Sets one or more coupons to Unpublished. Unpublished coupons will return 'Invalid Coupon' on the Appointment Booking screen.

Unpublish: Sets one or more coupons to Unpublished.

Remove: Deletes one or more coupons.

Help: Opens this help screen.

List Area

ID: Unique ID for the coupon.

Description: This text appears on the booking screen.

Coupon Code: The Coupon Code is what the customer enters to get the discount. When the user enters a coupon code it is validated by the system and the appropriate discount is applied. This code is stored in the booking so you can tell a customer used a coupon with the order.

Value: This is the amount that will be discounted.

Type: This tells what type of discount will be applied, fixed amount or percentage.

Expiry: This tells when the coupon will expire. An expired coupon will return 'Coupon Expired' when the user attempts to use it.

Max, Total & Current: User/usage counts

Published: Indicates the published state.

Send email notifications TO:

support@softventures.com

(multiple recipient example: joe@abc.com,frank@xyz.com)

Email notification FROM address:

support@softventures.com

Email notification SUBJECT:

ABPro 3.0.6

HTML email:

Yes

Yes = send HTML email
No = send plain text email.

Login Required:

No

Yes = users not logged in will not be allowed to book an appointment.

Name Read Only

No

If the user is logged in, do not let them change the name ABPro pulled from the Joomla Users table.

Phone:

Optional

If set to Yes, Phone number will be a required field.

Read Only:

No

Set to Yes if you do not want the visitor to change the value.
Note: Changes, if allowed, are never written back to CB or FS. Changes are only stored in the ABPro booking.

[optional] Fetch data from Joomla profile:

profile.phone

If you have enabled the Joomla User Profile plug-in you can map the Phone to a Profile field here.

[optional] Fetch data from CB profile:

Select a CB profile value

If you are using Community Builder and wish to populate the ABPro booking screen from a CB profile field, set the field mapping here.

[optional] Fetch data from JS profile:

Select a JS profile value

If you are using JomSocial and wish to populate an ABPro UDF field from a JS profile field, set the field mapping here.
Only Textbox or Textarea fields can pre-fill from JomSocial.

Email:

Required

If set to Yes, Email address will be a required field.

Hide logo:

No

If set to Yes, the logo at the bottom of the booking screen will not show.

Date Picker Start Day:	Sunday	Sets what day of the week the popup date picker starts with.
Date Picker Format:	DD-MM-YYYY	Set the popup date picker format for all front end screens.
Limit a User's Bookings:	0 in 1 days	You can limit the maximum number of bookings a user can make. Only applies to logged in users so only usable with Login Required = Yes. 0 = NO LIMIT
Auto-Accept Bookings:	Yes	If set to Yes, new bookings will skip the New status and go automatically to 'Accepted' status. This can be overridden at the resource level.
Block on New:	No	If Auto-Accept = No, then new bookings go in as status 'new'. Set this to Yes if you wish new, non-accepted booking requests to block the timeslot so no one else can request it. If Auto Accept = Yes, this setting is ignored.
Allow Cancellation:	No	If set to Yes, and you include the cancellation_id in the confirmation message, the user will be able to cancel their booking. If set to 'From My Bookings Only', the booking screen cancel box will not show.
	up to 4 hours before booking. Absolute hours, not range hours.	Note: This system does not do PayPal refunds so if you have PayPal enabled AND you 'Allow Cancellation' you must manually refund payments.
Allow Credit Refunds:	Yes	Only applies to User Credit System. Yes = Cancel re-instates user credit No = No Refunds, cancel does not return credits.
Time Format:	12 hour AM/PM	Time Format effects front end display only
Use JQuery Tooltips:	No	If set to yes, the JQuery code can be found/edited in file sv_tooltips.js and css in sv_tooltips.css Note: Due to a problem with IE dropdown lists, JQuery tooltips are disabled for dropdown lists if the user is running IE.
Enable Early Booking Discounts:	No	When enabled, you can define percentage or flat rate discounts to be given if bookings are made x days in advance. The discounts are defined in the resource and service setup screens. Cannot be used with coupons.
Force Gap:	0	If you are using Service Based Duration and need to force a gap between bookings you can enter a number of minutes here. If you are not using Service Based Duration you should use timeslot definitions to create any gaps you require. Note: The <i>simple booking screen</i> will enforce on submit and does not have the granularity to force gaps smaller than one timeslot. Only use if Max Seats = 1 .

Just-in-time Submit:	<input type="text" value="No"/>	If set to Yes, the submit button will not appear until after the customer has selected a timeslot.
Enable ddSlick:	<input type="text" value="Yes"/>	Enable the jQuery ddSlick plug-in to display images and text in Category, Resource and Service, dropdown lists.
Enable Auto Resource:	<input type="text" value="Yes"/>	If set to yes, when a user accesses the front end Control Panel , and they are not a resource administrator, the system will create a resource for them and make them the administrator. This means any user can become a resource and resource admin so they can accept their own appointments.
Auto Resource Groups:	<input type="text" value="ABPro Member"/> <input type="button" value="Add >>"/> <input type="button" value=" << Remove"/> <input type="text" value="ABPro Member"/>	You can control which users can create resources for themselves by using Joomla Groups. The Auto Resource setting, above, must be enabled for this setting to have any effect. Default = Registered, so all registered users can create resources.
Auto Resource Category:	<input type="text" value="Calgary"/> <input type="button" value="Add >>"/> <input type="button" value=" << Remove"/> <input type="text" value="Calgary"/>	If you are using Categories in ABpro, you can set the default category to which new auto resources are assigned when created. Changes made here have no effect on existing auto resources. The Auto Resource setting, above, must be enabled for this setting to have any effect.
Header Text:	<input type="text" value="[Your header text here]"/>	
Footer Text:	<input type="text" value="[Your footer text here]"/>	

Send email notifications TO: When a new booking request is created by the front-end screen, a notification is emailed to the address specified here. Note this can be overridden at the resource level, so different resources can send notifications to different addresses.

Email notification FROM address: Any emails sent from the component must have a FROM address. This should be the same domain as you web site. Example: if your web site is **abc.com**, the FROM must be **somebody@abc.com** or else you mail server may reject the outgoing mail as 'relayed' or spam.

Email notification SUBJECT: This will be the subject used in email notifications

HTML email: Yes = send HTML formatted email, No = send plain text emails.

Login Required: If set to Yes only registered users will be allowed to submit a booking.

Phone: Make the phone number a required input field, optional field or hide altogether. You can also map the phone number to either Community Builder, JomSocial or Joomla Profile Plug-in. See the appropriate sections later in the guide.

Email: Make the email address a required input field, optional field or hide altogether.

Hide logo: Hide the AppointmentBookingPro.com link on the front-end screen.

Use DIV calendar: If set to Yes, the popup calendar used by the booking screens will be a CSS div based object, if No it will be a popup window.

Date Picker Start Day: The date picker popup calendar can be set to start the week with Sunday or Monday.

Date Picker Format: Set the popup date picker format for all front end screens. Choices are DD-MM-YYYY, MM-DD-YYYY or YYYY-MM-DD

Limit User's Daily Bookings: You can limit the maximum number of booking a user can make **x** days. This requires the user to be logged in.

Setting **1 booking in 1 days** means it will only allow a user to make one booking per day.

Setting **1 booking in 7 days** means it will only allow a user to make one booking between now and 7 days from now. It **does not limit** beyond 7 days from now. If you do not want people making bookings beyond the 7 day window you can set the resource 'Disable Dates After' to 7 days from now.

ABPro does not currently have the ability to limit in a floating window of x days.

Auto-Accept Bookings: Normally a booking 'request' is created, with the status of 'new', and notification is sent to the address specified above. A designated administrator would make the decision to accept or decline the booking request. With Auto-Accept = Yes, the 'new' status is skipped and the booking is added with the status of accepted. Bookings with status of 'new' do not lock the timeslot. Only 'accepted' bookings do that. You can have any number of 'requests' for the same timeslot but only one can be accepted. With Auto-Accept enabled the first booking locks the slot to prevent duplicates. (Unless multiple duplicates are allowed – see resource set for details)

Block on New: If Auto-Accept = No, then new bookings go in as status 'new'. Set this to Yes if you wish new, non-accepted booking requests to block the timeslot so no one else can request it.

If Auto Accept = Yes, this setting is ignored.

Allow Cancellation: If set to 'Yes', a system generated, unique, code is created and added to the booking. You can add this code to the confirmation sent to the user via tokens (see Tokens on the Messages tab). With Allow Cancellation = Yes, a section will be shown, at the bottom of the booking screen, where the user can enter their cancellation code and have their booking cancelled. This does not remove the booking, it just changes the status to 'cancelled' It will remove the booking from the calendar if one is in use.

Note: PayPal refunds are not handled by ABPro so if you allow cancellation and are using PayPal you will need to manually refund as required.

up to x hours..: You can set a minimum time, before the booking, that cancellation will be accepted. For example, if you set it to 24 hours and the customer attempts to cancel 4 hours before, they will get a message saying cancellations are only allowed up to x hours before the booking starts. See Messages tab for setting the exact wording you want.

Allow Credit Refund: Yes = reinstate credits on appointment cancel, No = do not reinstate credits.

Only applies to the ABPro User Credit system, has no effect on PayPal/AuthNet. ABPro never does PayPal/AuthNet refund.

Time Format: You can specify the time format to be used on the front-end screen, either 24 hour or 12 hour +AM/PM. All internal times and administrator screens are in 24 hour format.

Use JQuery Tooltips: If set to yes, the JQuery code can be found/edited in file sv_tooltips.js and css in sv_tooltips.css

Enable Early Booking Discounts: When enabled, you can define percentage or flat rate discounts to be given if bookings are made x days in advance. The discounts are defined in the resource and service setup screens. Cannot be used with coupons.

Force Gap: If you are using Service Based Duration and need to force a gap between bookings you can enter a number of minutes here. If you are not using Service Based Duration you should use timeslot definitions to create any gaps you require.

Note: The simple booking screen will enforce on submit and does not have the granularity to force gaps smaller than one timeslot. Only use if Max Seats = 1.

Just-in-time Submit: If set to Yes, the submit button will not appear until after the customer has selected a timeslot.

Enable ddSlick: Enable the jQuery ddSlick plug-in to display images and text in Category, Resource and Service, dropdown lists. See How-To on AppointmentBookingPro.com for details on using images in ABPro.

Enable Auto Resource: If set to yes, when a user accesses the front end Control Panel, and they are not a resource administrator, the system will create a resource for them and make them the administrator. This means any user can become a resource and resource admin so they can accept their own appointments. See How-To on AppointmentBookingPro.com for details on using auto resource in ABPro.

Auto Resource Groups: You can control which users can create resources for themselves by using Joomla Groups. The Auto Resource setting, above, must be enabled for this setting to have any effect. Default = Registered, so all registered users can create resources.

Auto Resource Category: If you are using Categories in ABpro, you can set the default category to which new auto resources are assigned when created. Changes made here have no effect on existing auto resources. The Auto Resource setting, above, must be enabled for this setting to have any effect.

Header Text: Enter any information text that you would like to be displayed above the input fields of the booking screen.

Footer Text: Enter any information text that you would like to be displayed above the input fields of the booking screen.

Choose which optional 3rd party Calendar you want the Appointment Booking System to talk to.

☒ None

☐ Google ([click here for more information about Google Calendar](#))

Requires an account with Google and Zend Google Data Client Libraries installed on your server. See [Tutorial](#)

Calendar Fields

Event Title:

request.name

This is the value that will appear in the calendar view on the day cell.
resource.name = the name of the resource being booked
request.name = the person making the booking
UDFs, the screen labels for published UDFs of type textbox, radio or list, will be in the list also. If you select one of those, the user's choice or text entry will be used as the calendar entry title. Use caution with textbox types as *anything* the user enters will appear in the calendar.

Event Body:

<i>Thank you for your order.
</i>

[resource]
, has been booked for

This will appear in the calendar detail area. You can use the tokens as listed on the 'Messages' tab.

Daylight Savings Time:

Yes

ABPro stores times in local time but some 3rd party calendars store in UTC (or GMT) and ABPro needs to convert local to UTC by using the Joomla time zone setting. Not everywhere in the world implements DST. This setting lets you tell ABPro if it should apply DST when converting to UTC.

DST Start Date:

2014-03-09

DST End Date:

2014-11-02

Note: This system does not attempt to validate that you have any of the selected calendars installed or that they are operating correctly. You must install and test the calendar you wish to use according to the calendar's documentation.

Appointment Booking Pro Ver. 3.0.6 - Copyright 2008-2015 - Soft Ventures, Inc.

Appointment Booking Pro can be set to work with Google calendar.

There is no direct connection between ABPro and the calendars; ABPro just adds/removes data from the calendar's tables. This means the communication is one-way, ABPro knows about the calendar but the calendar has no knowledge of ABPro. You cannot initiate a booking from the 3rd party calendar and have it talk to ABPro.

When a calendar is chosen, a section dealing with the calendar will appear in the booking details screen.

Request Status:

Current Calendar: JCalPro

Post to Calendar:

Calendar Category:

Calendar Comment:

None: do not use a 3rd party calendar

Google: Use Google calendar. See 'Google Calendar and ABPro' later in this guide for details.

Calendar Fields: 3rd party calendars have a 'title' and 'body' area. The title is what appears in the calendar cell, the body is what appears when you open a calendar date for details on the event. You can tell ABPro which field to put in which area.

Event Title: Choose either resource.name (name of the resource) or request.name (name of the requestor)

Event Body: This is what will be placed in the calendar body area. You can use tokens too insert booking information.

These are the **tokens available**:

Tokens that can be used in the Booking Complete message. These will be replaced at runtime by the system.	Token	Will be replaced with	Token	Will be replaced with
	[resource]	name of the resource being booked	[resource_category]	the resource category
	[requester name]	the name of the requester	[resource_service]	the resource service
	[startdate]	start date of the booking	[phone]	the phone number of the requester
	[starttime]	start time of the booking	[email]	the email address of the requester
	[enddate]	end date of the booking	[cancellation_id]	the system generated cancellation_id
	[endtime]	end time of the booking	[booking_total]	
	[booked_seats]		[booking_due]	
	[coupon]		[booking_id]	
			[booking_deposit]	
for UDFs			UDF example	
	[screen label]	the UDF label	[Favorite Fruit]	value entered by user for Favorite Fruit
for Extras			Extras example	
	[screen label]	the Extras label	[Red Pencil]	number of Red Pencils ordered
for Seat Types			Seat Types example	
	[screen label]	the Seat Types label	[Adult]	number of Adult seats ordered

Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - [Soft Ventures, Inc.](#)

Example:

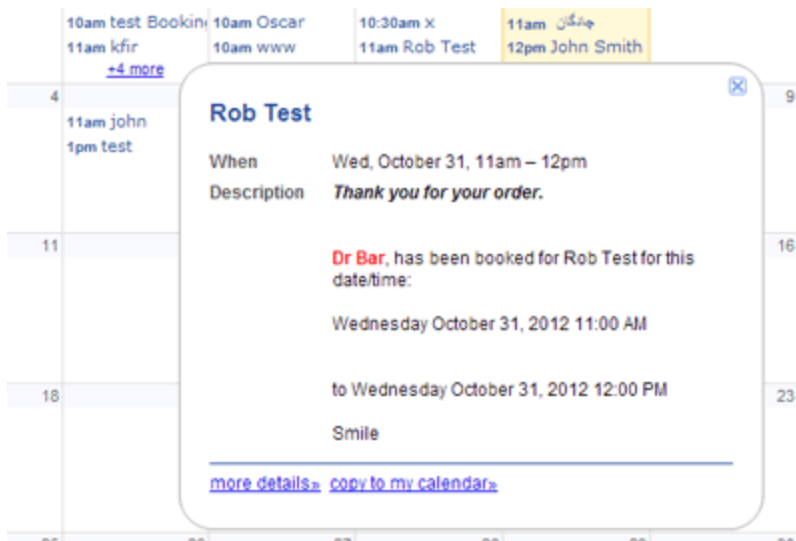

Event Body:

```
<b><i>Thank you for your order.</i></b>
<br />
<b><font color="red">[resource]</font></b>, has been
booked for [requester name] for this date/time:<br />
[startdate] [starttime]
<br />
to [enddate] [endtime]

Smile
```

This will appear in the calendar detail area. You can use the tokens as listed on the 'Messages' tab.

Yields..

Daylight Savings Time: ABPro stores times in local time but some 3rd party calendars store in UTC (or GMT) and ABPro needs to convert local to UTC by using the Joomla time zone setting. Not everywhere in the world implements DST. This setting lets you tell ABPro if it should apply DST when converting to UTC.

DST Start Date: What date does DST start. Required so bookings for DST dates can be made outside of DST.

DST End Date: What date does DST end. Required so bookings for DST dates can be made outside of DST.

These settings are used for the Graphic Availability Display (GAD) and Wizard booking screens only.

Default Grid Start Time:

8:00

Default Grid End Time:

18:00

Hide Grid Start/Stop controls:

No

Yes=Do not show the grid start/end dropdown lists on the GAD screen. The grid will be fixed at the values above.

Grid Start Day:

☐ Today

☒ Tomorrow

☐ Monday

☐ 3 days from now

☐ Specific date: Tomorrow

Today = Grid will start with today's date
 Tomorrow = Grid will start with tomorrow's date
 x days from now = Grid will start at x days from now.
 Specific date = Grid will start at the selected date

Grid Width:

-1

You may need to adjust this to work with your template. If you wish the grid to resize to your template set this value to -1. Automatic resizing does not work in all templates. The recommend method is to set a fixed size that work for your template. (default is 680)

Name Width:

100

This is the with of the Y-Axis for the availability table. Either date or name. This is ignored is the grid width is set to -1 (default is 90)

Available Time Slot image:

tick.png

Grid slot 'available' image, located in components/com_rsappt_pro3 directory. If you want a different image place it there or specify and absolute path to the image. Specify 'no_image.png' is you want no image.

Booked Time Slot image:

publish_x.png

Grid slot 'booked' image, located in components/com_rsappt_pro3 directory. If you want a different image place it there or specify and absolute path to the image. Specify 'no_image.png' is you want no image.

Grid Date Format:

%a %d-%b-%Y

This sets the date format for the dates on the left of the grid. The format string info can be found at <http://ca2.php.net/strftime>. Do not use %e even though it says you can, it does not seem to work reliably.

Long Date Format:

%W %B %e, %Y

This date format is used in the token system for showing start date where more room allows a longer date format to be displayed.

Number of days to show:

7

When viewing by resource, this sets the number of days to show in the grid. Default is 7. More days = longer screen and slower response as more days need to be calculated and added to the grid.

Time on Y-Axis:	<input type="button" value="No"/> ▼	If set to Yes, the GAD screen will display time down the side (y-axis) of the screen and either resources or dates along the top (x-axis). This view is prone to css problems plus some(many?) optional settings to not work properly with this view. If it works for you - great - if not, do not use it. Limitations: This option is NOT compatible with the resource setting 'Hide non-Booking Days'. Not usable for more than 6 or 7 resources and/or 7 days, or else columns get too narrow.
Row Height:	<input type="text" value="40"/>	
Show Seats Available:	<input type="button" value="Yes"/> ▼	Instead of a checkmark indicating a free timeslot, show the number of available seats.
Who Booked in Tooltip:	<input type="button" value="No"/> ▼	If a slot with Max Seats > 1 is not fully booked, setting this to Yes will make the mouseover show a list of who has already booked. Requires server call on mouse over.
Display Simple on Mobile:	<input type="button" value="No"/> ▼	If a mobile device is detected, display the Simple booking screen.

These settings are used for the Graphic Availability Display (GAD) booking screen only.

This display presents an alternate booking screen in which the user chooses a timeslot from a table of available slots.

Time on Y-Axis: If set to Yes, the GAD screen will display time down the side (y-axis) of the screen and either resources or dates along the top (x-axis).

Limitations: Not usable for more than 6 or 7 resources and/or 7 days, or else columns get too narrow.

YES

Grid Start Date: 2010-03-29		<input type="button" value="←"/> <input type="button" value="→"/>		Grid Start: 8:00 AM		End: 5:00 PM

4 PM							

NO (default setting):

Row Height: Sets row height when **Time on Y-Axis** is used.

Default Grid Start Time: The user can adjust the grid or table of timeslots to display an appropriate range of hours. This setting is the default when the screen opens.

Default Grid End Time: The user can adjust the grid or table of timeslots to display an appropriate range of hours. This setting is the default when the screen opens.

Hide Grid Start/Stop controls: If you do not need or want your visitors to change the grid range you can turn off the controls. If you use many small timeslots the grid start/stop gives the visitor the ability to zoom in on a block of time to better see small timeslots.

Grid Start Day: Set what day the grid opens on.

Grid Width: This is the width of the timeslots grid. You may need to adjust this to work with your template. This must be a number of pixels, not a percentage, as the system must calculate a ratio of pixels to grid minutes for resizing grid. (default is 700)

Name Width: This is the width of the Y-Axis for the availability table. Either date or name. Again, it must be a number of pixels not a %. (default is 100)

Available Time Slot image: You can specify an image to be shown in the available timeslots.

Booked Time Slot image: You can specify an image to be shown in the booked or unavailable timeslots.

Number of days to show: This setting determines the number of days to display in the availability grid. Default is 7.

The colors for this screen are set in the css file and can be tailored to you site. See the section on CSS elsewhere in this guide.

This screen is where you enable the ABPro shopping cart and set the cart specific confirmation messages.

Enable Cart: Yes

The cart will work for most common configurations of ABPro but not all.
ABPro features **not compatible** with the shopping cart are:

- User Credits / Gift Certificates.
- No cart level coupon, the coupon system still works at the individual booking but there are no cart wide coupons.
- No ics attachments.
- No cart for mobile apps. Mobile views yes, mobile apps no.
- No SMS to resource as a cart can have bookings for multiple resources

When the ABPro cart is enabled, the booking screens will display 'Add to Cart' and 'View Cart' buttons.

Cart Header:

-----------------------	--	-----	-------	----	---------	--

Purge Stale Bookings:

after

at

after	30
-------	----

minutes

This is used to free timeslots when customer bails out of PayPal/AuthNet without paying. The stale booking will have its status set to 'timeout'. Use with caution as this will cause PayPal eChecks to fail as they can take several `_days_` to clear.

This setting is also used as the time to allow a booking to be held in a shopping cart.

Note: If you disable this setting a booking will never timeout and if the user abandons their cart you will need to manually delete the booking(s).

When a booking expires, its status is set to 'timeout' and it is removed from the cart.

View Cart

The 'View Cart' button opens a popup showing the cart's contents.

The screenshot shows a 'View Cart' popup titled 'Appointments Cart'. It contains a table with the following data:

Resource	Date	From	Until	Total	
Dr Bar	Fri Mar 8, 2013	10:00 AM	11:00 AM	5.00	Remove
Dr Bar	Thu Mar 14, 2013	11:00 AM	12:00 PM	5.00	Remove
Bus Tour	Tue Mar 12, 2013	1:00 PM	2:00 PM	20.00	Remove
Total				\$ 30.00	

Below the table, a note states: 'NOTE: Adding an appointment booking to your cart will hold a timeslot for a limited time. After 30 minutes a booking will be removed from your cart and the timeslot released.' Below the note are three buttons: 'Add More', 'Submit Order', and 'Buy Now'. The 'Buy Now' button is highlighted in orange and includes logos for MasterCard, Visa, and Discover. A red arrow points to the 'Buy Now' button. Another red arrow points to the 'Remove' button for the 'Dr Bar' booking on 'Thu Mar 14, 2013'. A third red arrow points to the 'Total' column header. A fourth red arrow points to the 'NOTE' text. At the bottom left, the text 'Appointment Booking Pro Ver. 3.0.1 - Copyright 2008-2013 - Soft Ventures, Inc.' is visible. The background shows a calendar interface with dates from Wednesday, March 13, 2013, to Friday, March 15, 2013.

That cart can contain a mixture of resources and it shows the time limit note, and has 'Remove' buttons to allow the user to remove an item from their cart.

The above example also shows PayPal enabled with a non-Pay booking button enabled also.

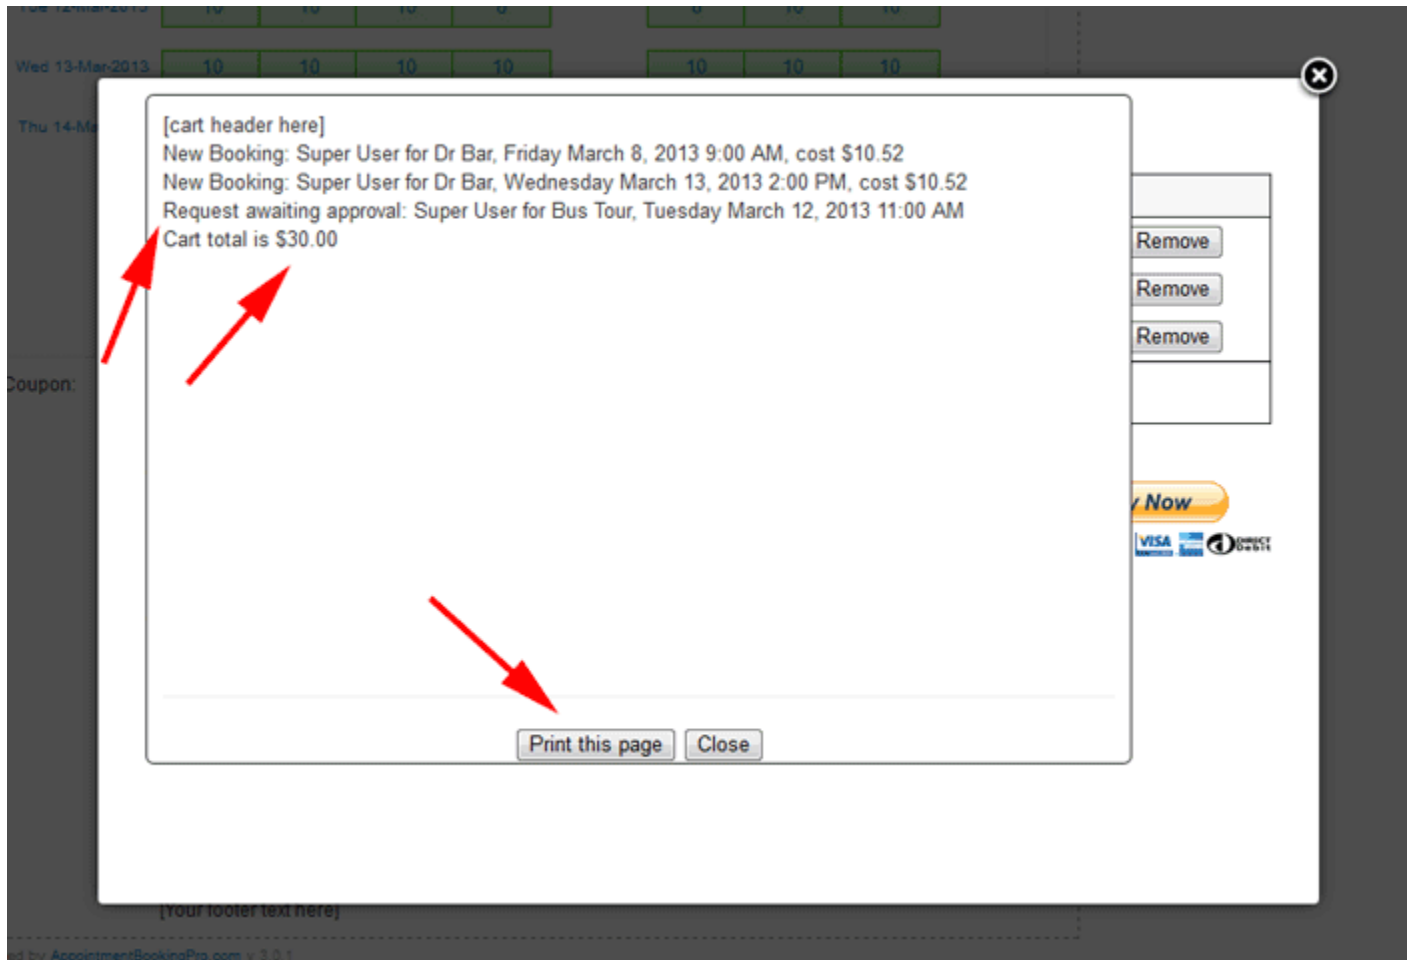

If you are not using PayPal, only the two left buttons appear. If you enable PayPal but not a non-Pay button, only the 'Add More' and PayPal will display.

Cart Messages

Because the cart is a single transaction but can place multiple bookings, it cannot use the normal ABPro messages. The normal messages are tied to booking ids and the cart can have many of those.

The cart message id built by taking the cart header + a booking specific message for each booking + cart footer.

Example:

Each booking gets a line in the confirmation.

The above example shows one resource auto-accept and the other requiring admin acceptance.

The individual rows can contain tokens to display booking specific information.

The footer has only one token [cart_total] that you can use to show cart total if you like.

In the above example, the Dr Bar resource only requires a deposit of \$5.00 so the total does not match. You could alter the booking line to show [booking_deposit] if you wish.

The same message is email to the customer as is displayed to them on-screen.

The same message is sent to admin and/or resource admins. There is no admin specific message for cart transactions.

Appointment Booking Configuration

Basic Setup Calendars GAD Setup Front-End Admin Shopping Cart Columns **Staff**

This screen contains settings that adjust how the staff screens operate.

Staff booking in the past: Enter the number of days in the past that staff can create a booking. 0 = no days, only future bookings allowed (default)

Status Quick Change: If set to Yes, staff will be shown a status dropdown on the appointments lists screens (Front Desk day and week views, Admin and Advanced Admin) so they can change a booking's status without opening the booking detail screen.

If you are using the ABPro Invoice plugin to talk to cclnvoices, here is where you set the Item Name and Item Description. Both can use ABPro tokens.

cclnvoice Item Name:

cclnvoice Item Description:

Appointment Booking Pro Ver. 3.0.6 - Copyright 2008-2015 - Soft Ventures, Inc.

Staff booking in the past: Enter the number of days in the past that staff can create a booking.
0 = no days, only future bookings allowed (default)

Status Quick Change: If set to Yes, staff will be shown a status dropdown on the appointments lists screens (Front Desk day and week views, Admin and Advanced Admin) so they can change a booking's status without opening the booking detail screen.

Settings for cclnvoice

If you are using the ABPro Invoice plugin to talk to cclnvoices, here is where you set the Item Name and Item Description. Both can use ABPro tokens.

cclnvoice Item Name: This is what will be added to a cclnvoice as the item name.
Default = *[resource] booking*

cclnvoice Item Description: This is what will be added to a cclnvoice as the item description.
Default = *[resource], booked for [requester name] for : [startdate] [starttime] to [endtime]*

For more details on using cclnvoice in ABPro see the How-To page on AppointmentBookingPro.com

Gift Certificates

Introduction

Gift Certificates in ABPro are essentially the [User Credits](#) system modified to support a credit balance applied to a number rather than a user.

ABPro does not print certificates.

ABPro does not sell certificates.

You 'create' a certificate by entering a number and a balance into the Gift Certificate screen.

Now if you give/sell that number to a customer, they can use it to pay for bookings. The certificate's balance will be adjusted by each booking made.

The certificate number is like cash to ABPro, anyone can use the number until its balance comes down to \$0.

The Gift Certificate system allows you to create a gift certificate number and assign credits to it.

A customer can use the gift certificate to pay for appointment bookings.

Gift Certificates **not not expire**. If you want to 'expire' a certificate you can set its balance to \$0 manually

ID:	18	
Gift Certificate:	<input type="text" value="98765"/>	Enter a number to be used as the gift certificate number. It can be non-numeric if you like, example 'GIFT1234'. This certificate number must be unique.
Certificate Name:	<input type="text" value="Test"/>	You can associate a name with this certificate. The name is free form text, perhaps a person's name or a promotion or 'sale' name. This value is for your records and has no effect on use of the certificate.
Amount:	\$ <input type="text" value="10.00"/>	Enter a credit amount. It must be a currency number, 0.00 or higher.
Comment:	<input type="text"/>	

Gift Certificate Activity

Bookings paid for with the gift certificate will appear below. Any edits made by Admin will appear here also.

ID	Comment	Booking	Increase	Decrease	Balance	Operator	Timestamp
239	Admin EDIT, balance now: 10.00				10.00	Super User	2015-01-27 16:33:41
231	Gift Certificate used for booking	(3202) Jan 27/14:00 - Dr Bar desc		50.00	0.00	Super User	2015-01-26 11:08:38

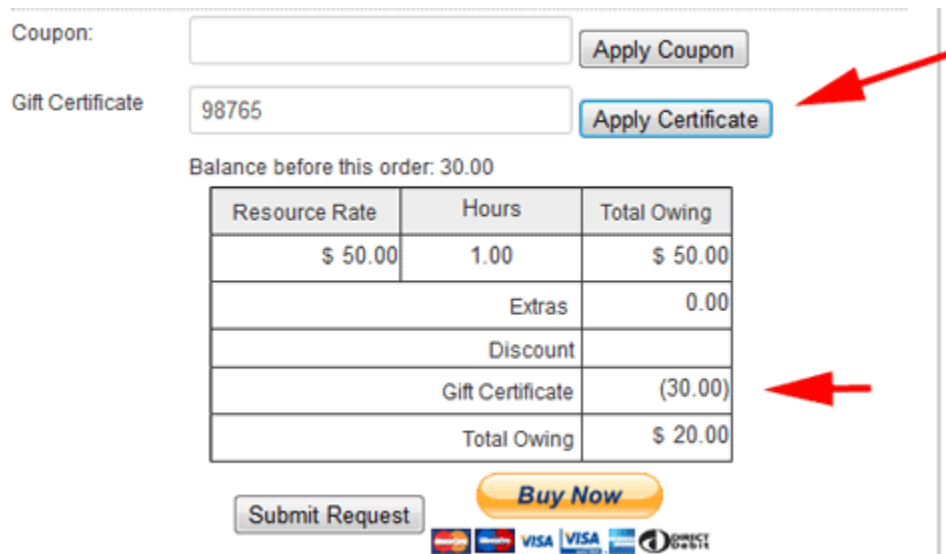

The screen is pretty much self-explanatory.

The Activity section at the bottom provides a limited audit trail of the certificate. Clicking on a booking id will open a detail view of the booking that was used to consume the amount shown in the 'Decrease' column.

If you enter a comment it will be logged, if not it will just enter 'Admin EDIT' and the current balance.

Using Gift Certificates

When Gift Certificates are enabled (at the top of the Gift Certificates list screen) the booking screen will display a box for the customer to enter a certificate number. When they click 'Apply Certificate' the current balance will be show below the certificate and the booking totals will be adjusted.

Coupon:

Gift Certificate

Balance before this order: 30.00

Resource Rate	Hours	Total Owing
\$ 50.00	1.00	\$ 50.00
Extras		0.00
Discount		
Gift Certificate		(30.00)
Total Owing		\$ 20.00

Two red arrows point to the 'Apply Certificate' button and the 'Gift Certificate' row in the table.

Issues and Limitations

Gift Certificates are component wide and cannot be limited to specific resources.

Because they are not tied to any resource, they can only be created/managed from the back end. There is no Gift Certificate screen in the front end Advance Admin.

By design, they do not expire. If you want 'expire' a certificate you can manually set its balance to \$0.

Limitations of the User Credit System apply to the Gift Certificates also.

- ABPro is not a banking system and Soft Ventures will not be liable for any discrepancies. Limited activity logging will be maintained but NOT at an auditing level one would find in financial system software.
- A payment processor must be enabled to turn on the financial parts of the screens.
- Certificates are purchased outside of ABPro and entered manually by Admin.
- If a user needs to pay part via PayPal (the certificate balance was not enough) and he bails out of PayPal without paying, he would need to contact admin to get his credit restored manually.
- The credit system only applies to the public booking screens and Front-Desk booking screen. Admin manually setting a booking to 'accepted' will have no effect on the certificate balance. If admin sets a booking to 'canceled', and the booking was paid all or in part by a certificate, the credit is re-instated. If part was paid by PayPal, that will be added to the certificate balance - no PayPal refunds are ever initiated by ABPro.
- Not compatible with manual booking acceptance (Auto-Accept = No)
- Not compatible with the Shopping Cart.

Email Messages List

ABPro allows you to define confirmation messages either Globally, by Resource, or by Category. When it comes time to send a confirmation message, ABPro first looks to see if you have assigned a message at the Category level and Resource level, Resource has precedence over category, finally it uses Global if no Resource or Category level message is defined. You create messages here, then assign them in the Resource or Category setup screens as required.

ID	Name	Published
1	Global	<input checked="" type="checkbox"/>
10	for CAT 1	<input checked="" type="checkbox"/>
11	Dr Bar	<input checked="" type="checkbox"/>

Appointment Booking Pro Ver. 3.0.3 - Copyright 2008-2014 - Soft Ventures, Inc.

Overview

ABPro allows you to define messages globally, for all resources and categories, resource specific or category specific.

A Message Set includes confirmation, in-progress, cancellation, reminder, too late to cancel and sms texts.

In the Resource and Category setup screens you can assign a Message Set as Global or specific.

When it comes time to send a confirmation message, ABPro first looks to see if you have assigned a message at the Category level and Resource level, Resource has precedence over category, and finally it uses Global if no Resource or Category level message is defined.

New: Creates a new, empty, Message Set.

New from Global: Creates a new Message Set, pre-setting message text from the current Global settings. This would be used if you want to create a resource specific set which differs from the Global set in only some areas.

Edit: Opens a Message set for editing.

Copy Message Set: Makes a new Message Set that has the same messages as another exiting set.

Several important messages produced by the system are represented here for you to edit.

There are two types of most messages, an email message and an SMS text message. SMS text messages are limited to 160 characters in length so we need essentially a short version and a long version.

Booking Complete (to Customer): This message is used when the booking is complete. You can use the tokens listed at the bottom of the screen in this message.

Example:

Booking Complete:

```

<b>Thank you for your order.</b>
<br><br><b>[resource]</b> has been booked for <b><i>[requester name]
</i></b> for this date/time:<br>
<b>[startdate] [starttime]</b><br>to <b>[enddate] [endtime]
</b><br><br>Your Cancellation ID is <b>[cancellation_id]</b><br>
To cancel your booking enter this code into the booking screen.

```

Appointment Booking

Thank you for your order.

Dr Bar has been booked for *Rob Stevens* for this date/time:
Monday October 27, 2008 3:00 PM
to Monday October 27, 2008 4:00 PM

Your Cancellation ID is **c42124feb2766ab2b1457c9e9eae146c**
To cancel your booking enter this code into the booking screen.

Booking Complete (to Admin): This is a message for Admin or resource admin used when the booking is complete. You can use the tokens listed at the bottom of the screen in this message.

Attach .ics file to confirmation email: You can have ABPro create an ics attachment for the confirmation email. If the recipient uses MS Outlook they will be able to use the ics attachment to add the booking to their Outlook or iCal calendar. This is a **one-way** operation, changes made in Outlook or iCal have NO EFFECT on ABPro.

In Progress is used when Auto-Accept is set to No, or when using PayPal and the visitor gets back to the site, from PayPal.com, before the PayPal ipn has confirmed payment.

Cancellation: This is the confirmation message for user initiated cancellation. It appears on the booking screen so best to keep it short and sweet ;-)

User Credits

Overview

The first thing to point out is that User Credit is OPTIONAL - you do not need to implement user credits unless you want to.

What is a User Credit?

User Credit is a number, representing a currency amount, associated with a registered user. You can sell your customer user credits OUTSIDE of ABPro then enter their number of credits into ABPro. Now when they go to make a booking, the cost of the booking is deducted from their credits.

Why use User Credit?

A few reasons:

If you want to sell your customer the ability to make multiple bookings without paying each time. For example, selling a package of 5 appointments.

Quantity discounting. You can sell a package of 10 appointments for less than the cost of 10 individual appointments. This could be done for example by selling \$100 of credits for \$75.

Support additional payment gateways, for example sell credits through Virtumart or an existing gateway, then just add the credits into ABPro.

Limitations

- ABPro is not a banking system and Soft Ventures will not be liable for any discrepancies. Limited activity logging will be maintained but NOT at an auditing level one would find in financial system software.
- PayPal must be enabled to turn on the financial parts of the screens.
- Credits are purchased outside of ABPro (PayPal buy now or Virtumart, etc.) and entered manually by Admin.
- A resource can have only one rate, that is you cannot offer a different rate for customers paying by PayPal vs paying by credits. Discounting would be handled outside ABPro when credits are purchased (ex: sell \$100 worth of credits for \$75)
- No partial cancel, ie: no cancel 1 seat of 3, cancel all and reorder.
- If a user needs to pay part via PayPal (his credit balance was not enough) and he bails out of PayPal without paying, he would need to contact admin to get his credits restored manually.
- The credit system only applies to the public booking screens and Front-Desk booking screen. Admin manually setting a booking to 'accepted' will have no effect on the user's credit balance. If admin sets a booking to 'canceled', and the booking was paid all or in part by user credit, the credit is re-instated. If part was paid by PayPal, that will be added to the user's credit balance - no PayPal refunds are ever initiated by ABPro.
- Not compatible with manual booking acceptance (Auto-Accept = No)

The List screen shows all user credit accounts and their current balances.

View account activity

Click on the User ID in the list screen (above) to open the detail screen for a specific user.

ABPro - User's Credit Detail: [EDIT]

Save & Close
Close

Use this screen to add/edit a user's credit balance.
The use of the credit system in ABPro is **optional**.
To use it you would sell the user credits OUTSIDE of ABPro then enter the amount here. When the user goes to make a booking, the booking charge is deducted from his/her credit balance.

ID:	15
User ID:	178
User Name:	John Doe
Credit Balance:	\$ <input type="text" value="17.02"/> Enter a credit amount for this user. Must be a currency number, 0.00 or higher.

Credit Activity

As bookings are made they will appear below. Any edits made by Admin will appear here also.

ID	Comment	Booking	Increase	Decrease	Balance	Operator	Timestamp
153	Credit used for booking	(1467) Nov 2/13:00 - Bus Tour desc		21.23	17.02	John Doe	2012-11-01 14:48:23
152	Credit used for booking	(1466) Nov 2/09:00 - Dr Bar desc		11.75	38.25	John Doe	2012-11-01 14:47:33
151	Admin EDIT, balance now: 50				50.00	Super User	2012-11-01 14:39:51

Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - Soft Ventures, Inc.

In the top section of the screen, you can manually adjust the current balance.

The lower section shows all activity with most recent activity at the top of the list. The ID of any bookings is a link to the booking detail.

The timestamp column shows when the change was made, the operator column shows who made the change.

Adding a New account

Select New on the User Credits list screen.

The screenshot shows the Joomla! ABPro interface for adding a new user credit. At the top, there's a Joomla! logo and the title "ABPro - User's Credit Detail: [NEW]". Below the title are two buttons: "Save & Close" and "Cancel". A message states: "Use this screen to add/edit a user's credit balance. The use of the credit system in ABPro is optional. To use it you would sell the user credits OUTSIDE of ABPro then enter the amount here. When the user goes to make a booking, the booking charge is deducted from his/her credit balance." The form includes fields for "ID:" (value 0), "User ID:", "User Name:" (a dropdown menu showing "Select a User"), and "Credit Balance:" (a text input with a dollar sign and the value 0). A note next to the User Name dropdown says: "Select user to create a credit account for. This list will only show users who are not already in the credit system." Another note next to the Credit Balance field says: "Enter a credit amount for this user. Must be a currency number, 0.00 or higher."

Select a user from the drop down list. The list will only show users not currently in the credit system.

Enter a starting balance and hit Save.

That's it. The Booking screen will now use the credit balance to pay for bookings.

The screenshot shows the "Appointment Booking" screen. It includes a message: "This is a demo for User's Credit. Login as test/test to see credit in action." The form has fields for "Your Name:" (Testy Tester), "Email:" (foo@bar.com), and "Resource:" (My Resource 1 - (\$10/hr)). Below this is the "Appointment Selection:" section, which shows "My Resource 1 - Tue 09-Feb-2010 - 11:00 AM - 12:00 PM". There are date and time pickers for "Grid Start Date:" (2010-02-09) and "Grid Start:" (8:00 AM) and "End:" (5:00 PM). A table shows available time slots for "My Resource 1" and "Nudder Resource" on 09-Feb-2010. The table has columns for 8 AM, 9 AM, 10 AM, 11 AM, Noon, 1 PM, 2 PM, 3 PM, and 4 PM. Green checkmarks indicate available slots, and red X's indicate unavailable slots. A legend explains: "Green - Indicates an available timeslot, click on green checkmark to select." and "Red - Indicates an unavailable timeslot." Below the table is a summary table:

Resource Rate	Hours	Total
\$ 10.00	1.00	\$ 10.00
Applied Credit:		(10.00)
Total:		\$ 0.00

A red arrow points to the "Total" row of the summary table. At the bottom is a "Buy Now" button.

If the user's credit balance is insufficient to cover the cost of the booking, the shortfall will be charged to PayPal.
 If you allow refunds on cancellation (see next section), no refund is made to PayPal.
 ABPro NEVER initiates PayPal refunds. If there was a shortfall amount it will be added to the user's credits on cancellation.

Allow Refunds

You can set whether you want ABPro to refund credits if a booking is cancelled or not.
 The setting to allow refunds or not is on the Configure screen, Basic Settings tab.

Allow Cancellation: Yes

Allow Credit Refunds: Yes

Note: This system only applies to User Credit System. Yes = Cancel re-instates user credit. No = No Refunds, cancel does not return credits.

My Bookings Screen

The user can view his current balance and activity on his account via the My Bookings screen.

Appointment Booking Pro Ver. 1.4.6 - Copyright 2008-2010 - Soft Ventures, Inc.

The Credit Activity section shows the most recent 20 events only, in reverse chronological order.

The Timestamp shows when the change was made and the Operator column shows who made the change.

Seats/Booking

ABPro was originally designed for individuals to book appointments. With version 1.4.3 the concept of 'seats per booking' was added. You can set 'maximum seats' for a resource (normally 1 for individual appointments) and customers can select how many seats they want to book. This allows ABPro to be used for booking seats in a class or on a tour

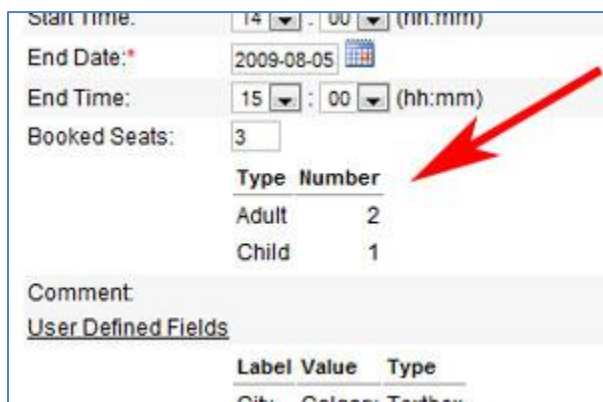

Seats are **optional** and should only be used if you are allowing multiple seats per timeslot. For sites booking individuals to appointments DO NOT use seats.

The screenshot shows the 'Appointment Booking' form. It includes fields for 'Your Name:', 'Phone:', 'Email:', and 'City:'. Below these is a 'Resource:' dropdown menu set to 'Resource 2 (e)'. A section for seat types follows, with dropdowns for 'Adult:', 'Youth:', 'Child:', 'Family:', and 'Large Group:', each with a corresponding price and description. The 'Total Seats:' is set to 2. The 'Appointment Selection:' is highlighted in green, showing 'Resource 2 - Mon 03-Aug-2009 - 11:00 - 12:00'. At the bottom, there is a 'Grid Start Date:' set to '2009-08-03' and a calendar icon. A time slot grid is visible at the bottom, with columns for 8:00, 9:00, 10:00, 11:00, 12:00, 13:00, and 1.

To disable the seats/booking capability, do not publish any seats types.

When in use, seat types appear in the booking details screen to show what types of seats the customer requires.

The screenshot shows the booking details screen. It includes fields for 'Start Time:', 'End Date:', 'End Time:', and 'Booked Seats:'. The 'Booked Seats:' field is set to 3. Below this is a table showing the breakdown of seats:

Type	Number
Adult	2
Child	1

A red arrow points to the 'Type' column header. Below the table is a 'Comment:' field and a section for 'User Defined Fields' with a table showing 'Label Value Type' and 'City Calgary Textbox'.

The Seat Type screen is accessed via the **Seats/Booking** control panel icon.

Edit Area

Seat Type: Seat Type name. This will become the booking screen label for the seat type.

Tool Tip: This text will appear when the customer hovers over the dropdown list for this seat type.

Seat Cost: This will be the amount charged **per seat** of this type. Exception; in the case of 'group pricing' the price is charged **per booking** regardless of how many seats.

Help Text: This text appears to the right of the dropdown list where the user selects how many seats of this type they want. **Example:** *Child (12 years or under)*

Group Seat Type: If set to Yes, this seat type is a 'group seat' and the charge will be fixed regardless of how many seats are being booked (to max group size). Example: Family price, \$x for a family of 5.

Max Group Size: Maximum number in the group price, example: Family rate max may be 5. This will allow a family of up to 5 seats for the fixed Family rate. This is also used as the max number of seats in the dropdown list for this seat type.

Resources: You can assign this seat type to one or more resources. **If NOT assigned, it will be shown for ALL.** Select one or more resources that this seat type applies to. If you wish this seat type to be available for ALL resources, do not select any.

Order: This determines the order this seat type will appear in the Appointment Booking screen.

Published: Only seat types with Published set to **Yes** will appear in the Appointment Booking screen.

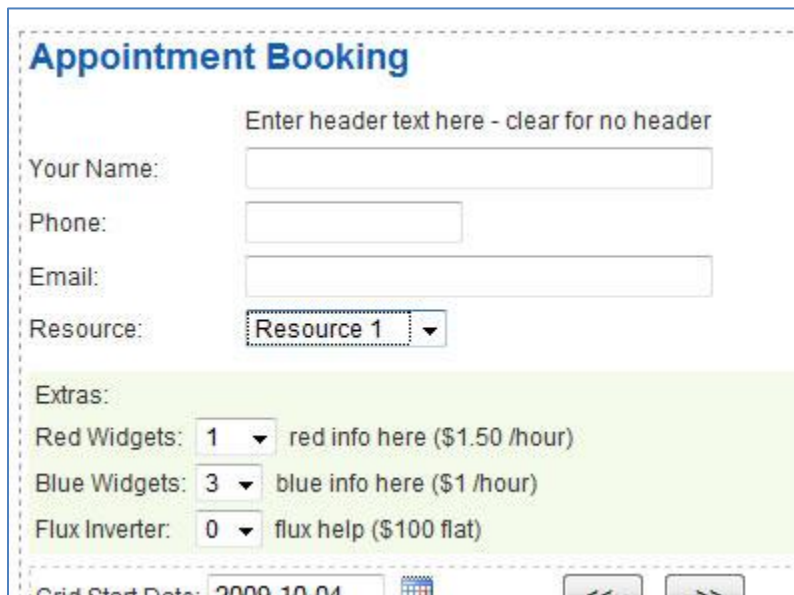

Extras

You can define any number of extra items that the user can add to a booking. These 'Extras' can have a cost associated with them and the booking total will be adjusted based on the user's choices.

Extras are **optional** you do not need to set up any extras.

Extras can be used in conjunction with PayPal and the appropriate totals will be calculated.

To disable the Extras capability, **do not publish any Extras**.

The screenshot shows a web form titled "Appointment Booking". It includes input fields for "Your Name:", "Phone:", and "Email:". Below these is a "Resource:" dropdown menu currently set to "Resource 1". A section titled "Extras:" is highlighted with a light green background. It contains three rows: "Red Widgets: 1" with a dropdown arrow and the text "red info here (\$1.50 /hour)", "Blue Widgets: 3" with a dropdown arrow and the text "blue info here (\$1 /hour)", and "Flux Inverter: 0" with a dropdown arrow and the text "flux help (\$100 flat)". At the bottom, there is a "Grid Start Date:" field set to "2009-10-04" and two navigation buttons.

When in use, extras appear in the booking details screen.

The screenshot shows a "booking details screen" with fields for "End Time:" (09:00 (hh:mm)), "Booked Seats:" (1), "Adult (R1):" (1), and "Youth:" (0). Below these is an "Extras:" section with "Red Widgets: 2" and "Blue Widgets: 3". A red arrow points from the "Extras:" label to the "Red Widgets: 2" text. At the bottom are "Comment:" and "User Defined Fields" sections.

The Extras screen is accessed via the **Extras** control panel icon or **More | Extras**.

Extras List

Extras are items your customer can choose to add to a booking that have a cost associated and will adjust the booking total charge.

<input type="checkbox"/>	ID	Screen Label	Extra Charge	How to charge	Order ▼	Published
<input type="checkbox"/>	2	Red Pencil	5.00	Flat	1	
<input type="checkbox"/>	3	Green Pencil	1.23	Hour	2	
<input type="checkbox"/>	1	EXTRA_1	10.00	Flat	3	

Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - Soft Ventures, Inc.

Toolbar Icons

- New:** Opens the New Extras Edit screen to allow you to add a new extra.
- Edit:** Opens the Extras Edit screen to allow you to view and modify the extra.
- Publish:** Sets one or more extras to Unpublished. Only Published extras will appear on the Appointment Booking screen.
- Unpublish:** Sets one or more extras to Unpublished so they will not show in the Appointment Booking screen.
- Delete:** Deletes one or extras.
- Help:** Opens this help screen.

List Area

- ID:** Unique ID for this extra.
- Screen Label:** This is the booking screen label for the extra.
- Extra Charge:** Charge, per hour or flat rate per booking, for this extra.
- How to Charge:** Charge this extra item per hour of the booking or as a flat rate or fixed charge.
- Order:** Order the extras will appear in the booking screen.
- Published:** Indicates the published state.
- Click on the **Screen Label** to open the edit screen.

Extra Detail

 **ABPro - Extra Item Detail: [EDIT]**

Use this screen to add/edit an Extra item.
Extras are items your customer can choose to add to a booking that have a cost associated and will adjust the booking total charge.

ID:	2	
Screen Label:	<input type="text" value="Red Pencil"/>	This is the screen label for the extra.
Tooltip:	<input type="text" value="How many do you need"/>	This text will appear when the customer hovers over the extra's dropdown list.
Extra Charge:	\$ <input type="text" value="5.00"/> per <input type="text" value="Booking"/>	This amount will be added to the booking (either as a flat charge or a per hour charge)
Duration:	<input type="text" value="10"/> <input type="text" value="Minute"/> per <input type="text" value="Booking"/>	Extras can be made to add duration to the booking if service based duration is in use . Use caution not compatible Simple Booking screen or some ABPro features like seats/booking. Once you set durations into Extras, bookings are no longer constrained by timeslot boundaries! Per Item means the duration minutes are added for each item, if user selects 3 of this extra, 3x the duration is added. Per Booking means duration minutes are added once regardless of how many items user requests.
Help Text:	<input type="text" value="Any # pencils adds 10 min to booking duration"/>	This text appears to the right of the dropdown list where the user selects how many of the Extra item they want.
Maximum Number:	<input type="text" value="5"/>	This text appears to the right of the dropdown list where the user selects how many of the Extra item they want. Setting the max value = 1 will display a checkbox rather than a dropdown list.
Default Number:	<input type="text" value="0"/>	This is the default number selected when the customer opens the booking screen. Note: This setting is not compatible with extra durations or ABPro Mobile. If you are using extra durations or ABPro Mobile, you must set this to 0 . The user changing the item count is what triggers new duration calculation.

You can assign this Extra to one or more resources. If NOT assigned, it will be shown for ALL.

Resources:	<div><div><input type="text" value="Dr Bar"/></div><div><input type="button" value="Add >>"/></div><div><input type="button" value="Remove <<"/></div></div> <div><div><input type="text" value="Dr Bar"/></div><div>Empty = ALL</div></div>	Select one or more resources that this Extra applies to. If you wish this Extra to be available for ALL resources, do not select any.
------------	--	---

Order	<input type="text" value="1"/>
Published	<input type="text" value="Yes"/>

Use this screen to define details of an extra.

Toolbar Icons

Cancel: Abort changes and return to the previous screen.

Save: Save changes and return to the previous screen.

Help: Opens this help screen.

Edit Area

Screen Label: This is the booking screen label for the extra.

Tool Tip: This text will appear when the customer hovers over the dropdown list for this extra.

Extra Charge: Charge per hour or per booking, for this extra. How to charge; per Hour or flat rate per booking.

Duration: Extras can be made to add duration to the booking.

Use **caution** not compatible Simple Booking screen or some ABPro features like seats/booking.

Once you set durations into Extras, **bookings are no longer constrained by timeslot boundaries!**

Per Item means the duration minutes are added for each item, if user selects 3 of this extra, 3x the duration is added.

Per Booking means duration minutes are added once regardless of how many items user requests.

Help Text: This text appears to the right of the dropdown list where the user selects how many extras of this type they want.

Maximum Number: This sets the maximum number in the dropdown list. This should be kept between 1 and 10 to keep the dropdown list size from being too large. For extras where you need large numbers you can define packages (example: 'Package of 10'). If combined with individuals and the customer wanted 32, he could specify 3 'Package of 10' and 2 individuals. The dropdown list starts from 0 so the **user can specify they do not want any by choosing 0.**

Default Number: This number is the default the booking screen will open with.

Resources: You can assign this Extra to one or more resources. If NOT assigned, it will be shown for ALL. Select one or more resources that this Extra applies to. If you wish this Extra to be available for ALL resources, do not select any.

Order: This determines the order this Extra will appear in the booking screen.

Published: Only extras with Published set to **Yes** will appear in the booking screen.

Payment Processors

This screen is used to setup PayPal, Authorize.net and/or 2Checkout

You **can** also choose to have ABPro **display booking costs** even though you are **not using either payment gateway**.

Payment Processors
General Settings PayPal Google Wallet Authorize.net (SIM) Authorize.net (AIM) 2Checkout

Additional Fee: 0.00 Fixed Additional charge, can be fixed fee or percentage. Set to 0 for no fee.

Enable Coupons: Yes Set to yes if you wish to enable the coupon system and show a coupon entry box on the booking screens.

Non-Pay Booking Button: Yes ABPro always shows a submit button when payment processors are disabled.

No = Do not show a non-pay booking button when payment processors are enabled.(non-pay bookings are not allowed)

Yes = Still show a non-pay booking button when payment processors are enabled. (non-pay bookings are optional)

Display & Block = Display costs w/o payment processors button AND blocks booking if amount due > 0.00

Display Only = Display a non-Pay button AND show booking costs, will enter booking as payment due.

Purge Stale Bookings: Yes after 30 minutes This is used to free timeslots when customer bails out of PayPal/AuthNet without paying. The stale booking will have its status set to 'timeout'. Use with caution as this will cause PayPal eChecks to fail as they can take several _days_ to clear. This setting is also used as the time to allow a booking to be held in a shopping cart.

Appointment Booking Pro Ver. 3.0.3 - Copyright 2008-2014 - Soft Ventures, Inc.

Additional Fee: You can optionally add an additional fee to the transaction. This can be either a fixed fee or percentage for the total. An example may be a processing fee you wish to charge.

Enable Coupons: Turns on ABPro's coupon system.

Non-Pay Booking Button: If you are not using PayPal or Authorize.net, ABPro will show a submit button to make the booking. If you enable PayPal or Authorize.net the customer much choose one of those payment buttons to make a booking. If you wish to allow the customer to **make a booking without paying**, for example to *pay at the door*, this option allows you to show a submit button alongside the payment buttons.

- **Yes** = Show submit button, allow bookings without paying.

- **No** = Do not show the button.
- **Display Only** = Normally, if PayPal and Authorize.net are **both disabled** ABPro treats the bookings as free and does not show any financial information on the booking screen. Setting this to 'Display Only' will show booking costs even though no payment gateway is enabled. This would be used if you collect payment outside of ABPro such as pay-at-the-door.
- **Display & Block** = Display booking costs, without payment buttons, but block the booking from being processed if there is an amount due. This would be used in conjunction with the User Credit system such that if the user has run out of credit, they cannot book.

Note: normally the User Credit system would be used with PayPal or AuthNet so the customer could still book but would be sent to the appropriate payment site to cover any shortfall in their credit.

Purge Stale Bookings: This is used to free timeslots when customer bails out of PayPal/AuthNet without paying. The stale booking will have its status set to `timeout`. Use with caution as this will cause PayPal eChecks to fail as they can take several *days* to clear.

Enable PayPal:	<input type="text" value="Yes"/>	Yes = show a PayPal button No = PayPal not enabled.
PayPal button image URL:	<input type="text" value="https://www.paypal.com/en_US/i/btn/"/>	For different buttons, use PayPal's make button facility, then cut&paste the button url here.
Currency Code:	<input type="text" value="CAD - Canadian Dollar"/>	
PayPal Account:	<input type="text" value="svtest@softventures.com"/>	Enter your PayPal business account, normally that is your email address.
PayPal Sandbox URL:	<input type="text" value="https://www.sandbox.paypal.com/us/i"/>	Use of the PayPal sandbox for testing is recommended but not mandatory.
PayPal Production URL:	<input type="text" value="https://www.paypal.com/us/cgi-bin/w"/>	
Use PayPal Sandbox:	<input type="text" value="Yes"/>	If set to Yes, a booking request will go to the PayPal sandbox.
Your Logo image:	<input type="text"/>	If you want the PayPal payment screen to display your logo, enter a full url here (ex: http://mysite.com/mylogo.png)
Item Name:	<input type="text" value="[resource]: [startdate] [starttime]"/>	In PayPal, this will be show as what is being purchased. Supports same tokens messages. Max 127 characters (PayPals rule)
Optional Field Name 0:	<input type="text" value="Red Pencil count in your order"/>	You can pass optional data to PayPal which will appear in the order details on PayPal. You need to specify a name/value pair like 'Adult Seats'/{Adult} to show in PayPal as 'Adult Seats: 5'
Optional Field Value 0:	<input type="text" value="[Red Pencil]"/>	
Optional Field Name 1:	<input type="text" value="Green Pencil count in your order"/>	You can pass optional data to PayPal which will appear in the order details on PayPal.

*Your customers **do not need a PayPal account** to purchase via PayPal.*

With PayPal enabled, the booking screen will show the calculated cost at hours x rate, or flat rate depending on how you set it up.

The other main difference when enabling PayPal, is that a new request will get inserted with a status of 'pending' rather than 'new'. The user is sent to PayPal to make their payment. They are sent back to your site. In a separate thread, PayPal processes the payment and sends an IPN (Instant Payment Notification) message to your site. This IPN is really not 'instant' and your customer may have been returned to your site before the IPN arrives. In this case the in-progress message is shown to the customer. When PayPal completes the payment processing, they send the customer an email and send your site an IPN message. When the customer comes back to your site; the return page checks to see if the

transaction has completed. If it has, it displays the confirmation message, if not it displays the in-progress message. These messages are set in the 'Messages' tab.

There is a possibility that the customer may abandon the booking after being sent to PayPal. In this case the booking will stay in '**pending**' and need to be cleared either **manually** or by the **stale booking purge** option. If the customer elects to 'Cancel' the payment in PayPal, the IPN will reflect that and ABPro will set the request from 'pending' to 'cancelled'.

The relation between ABPro's '*Auto-Accept*' and '*PayPal Enabled*' is show below.

PayPal = No (no PayPal submit button)

Auto-Accept = Yes

New booking status = 'Accepted' (timeslot locked)

Auto-Accept = No

New booking status = 'New' (timeslot not locked)

PayPal = Yes (ONLY PayPal submit button shown)

Auto-Accept = Yes

New booking status = 'Pending' -> goes to 'Accepted' on IPN ok (Pending locks appointment)

Auto-Accept = No

New booking status = 'New'

Accept on Payment = Yes -> goes to 'Accepted' on IPN ok

Important!!

When a booking is made with status 'Pending', the timeslot is locked just as if it were accepted. The display GAD display will show a dashed border so you can see what timeslots are 'Pending'. Normally a slot should only be 'Pending' for a few minute (seconds?) while PayPal is processing the payment. If the user aborts out of PayPal without paying, the slot will stay 'Pending' (and locked) until admin deletes it or it is cleared by the stale booking option below.

Enable PayPal: Enable ABPro to use PayPal. You require either a **Premier** (recommended) or **Business** PayPal account to accept payments.

PayPal button image URL: This is the location used to fetch the PayPal button image. For other images, use PayPal to 'create a buy now button' then cut&paste the button URL.

Currency Code: What currency you wish to charge in.

PayPal Account: Enter your PayPal business account, normally your email address.

PayPal Sandbox URL: Use of the PayPal sandbox for testing is recommended but not mandatory. How to use the sandbox is beyond the scope of this help file.

PayPal Production URL: This is the URL to access PayPal, it was made editable as it may change for non-North American PayPal accounts(?).

Use PayPal Sandbox: If set to 'Yes', the buy-now button will be send you to the PayPal sandbox URL rather than the production URL.

Logo Image PayPal: You can display your logo on the PayPal screen. Enter a URL here.

Item Name: You can modify the item name, this is what PayPal shows as the thing being purchased.

Optional Fields (0-3): You can specify additional information to be show on the PayPal screen.

PayPal Optional Fields Example

Single Language (ie: not using language file keys)

In this example we will define an Extra call 'Red Pencil' and show how many were ordered in the PayPal screen.

First define the Extra..

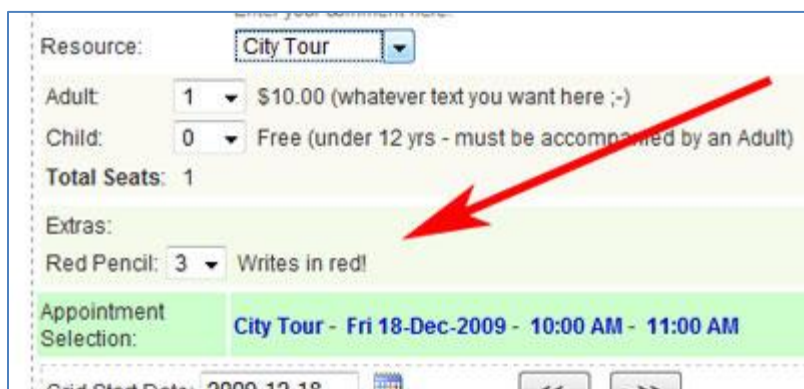

Now set the PayPal optional field.

Your Logo Image:	
Item Name:	[resource]: [startdate] [starttime]
Optional Field Name 0:	Red Pencil count in your order:
Optional Field Value 0:	[Red Pencil]
Optional Field Name 1:	

The Name is whatever text you want to display on the PayPal screen for this optional item.

The Value is a token ABPro will replace with the number the customer chose. For Extras, Seat and UDFs you use the screen label as the token. In our case the screen label is "Red Pencil" so the token is [Red Pencil].

In the booking screen...

Resource: City Tour

Adult: 1 \$10.00 (whatever text you want here :-)

Child: 0 Free (under 12 yrs - must be accompanied by an Adult)

Total Seats: 1

Extras:

Red Pencil: 3 Writes in red!

Appointment Selection: City Tour - Fri 18-Dec-2009 - 10:00 AM - 11:00 AM

Grid Start Date: 2009-12-18

I choose 3 pencils.

In the PayPal screen..

Description	Unit Price	Quantity	Amount
City Tour: Friday December 18, 2009 10:00	\$11.75	1	\$11.75
Red Pencil count in your order: 3			
Item total:			\$11.75
Total:			\$11.75 CAD

PayPal is the safer, easier way to pay

This screen allows you to define rate adjustments for a resource. Initial rate setup is done in the resource setup screen. Adjustments here are **added** to the base rate. For more information see ABPro User's Guide section 'Using Rate Adjustments'

ID	Resource	By	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Start	End	Adjustment	Unit	Published
1	Dr Bar	DayAndTime				Yes				13:00	16:00	10.00	Percent	
2	Bus Tour	DayOnly		Yes						00:00	00:00	10.00	Flat	

Appointment Booking Pro Ver. 3.0.5 - Copyright 2008-2014 - Soft Ventures, Inc.

By: Shows when the discount applies.

- DayOnly = The adjustment applies to all bookings in the day(s) specified, regardless of time.
- TimeOnly = The adjustment applies to all bookings in a specified time range, regardless of day.
- DayAndTime = The adjustment applies to specified day(s) in specified time ranges only.

Sun-Sat: Days to be used in adjustment determination.

Start / End: Time range to be used in adjustment determination.

Adjustment: The amount to adjust the rate by. Can be (+) or (-), flat rate or percentage of rate.

Click on the ID to open the detail screen.

Rate Overrides

Rate Overrides is an **optional** feature allowing you to define special rates charged based on what Joomla Group a customer is assigned to. These overrides can be applied to resource(s), service(s), extra(s) or seat type(s).

Initial rate setup is done in the respective entity's setup screen. For example, the resource rate is set in the resource setup screen.

Rates set here override those rates so you can do things like, offer a different rate for registered users or users assigned to specific Joomla Groups.

Before setting up an override rate, you should be aware of ABPro's order of preference in different types of rates.

Order of Precedence

Service rate has precedence over *resource* rate. If you define both, the service rate is used.

Seat price has precedence over both *resource* and *service* rates.

The Override rates **do not** compromise this order of precedence.

For example, if you define an override rate for a Resource but you have a Service rate, the Service rate is used.

Rate Overrides Detail

New Override

 **ABPro - Rate Overrides: [NEW]**

This screen allows you to define rate overrides for resource, service, extra or seats type. Initial rate setup is done in the respective setup screen. For more information see ABPro User's Guide section 'Using Rate Overrides'

ID	0
Type	<input type="text" value="Select Type"/>
Name	<input type="text"/>
Group	<input type="text" value="ABPro Member"/> <small>Select the Joomla Group that this override applies to. When a logged in user is in this group they will get the rate here. Note: If the user is assigned to multiple groups with overrides, the lowest rate is given to the user.</small>
Rate	<input type="text"/>
Published	<input type="text" value="Yes"/>

Edit Existing Override

This screen allows you to define rate overrides for resource, service, extra or seats type. Initial rate setup is done in the respective setup screen. For more information see ABPro User's Guide section 'Using Rate Overrides'

ID	2	
Type	resource	
Name	Bus Tour	
Group	<input type="text" value="ABPro Member"/>	Select the Joomla Group that this override applies to. When a logged in user is in this group they will get the rate here. Note: If the user is assigned to multiple groups with overrides, the lowest rate is given to the user.
Rate	<input type="text" value="8.88"/>	
Published	<input type="text" value="Yes"/>	

Care should be taken to avoid multiples of the same override. In that case the lowest published rate is used.

Toolbar Icons

Cancel: Abort changes and return to the previous screen.

Save: Save changes and return to the previous screen.

Help: Opens this help screen.

Edit Area

Type:

[Edit] This shows the type of override being edited.

[New] This drop down list allows you to choose the type for a new override.

Name:

[Edit] This shows the specific entity (resource, service, extra or seat type) for the override.

[New] This drop down list populates with the specific entities based on the Type selection. Selecting type of 'Extra' will cause this box to fill with all the 'Extras' so you can pick a specific one to override.

Group: This shows what Joomla Group the override applies to. If you setup your resource with a rate of \$10, then add a resource type override for group 'registered' as \$8, when a logged in user makes a booking, they will receive the \$8 rate. If you create multiple overrides for different groups, ABPro will give the customer the lowest rate they are eligible for based on group(s) to which they are assigned.

Rate: This is the rate for this override. You cannot change the units of a rate. For example if you resource rate is setup as *per hour*, the override will be *per hour* also.

Published: Indicates the published state.

Email Marketing

ABPro can add booking customers to your AcyMailing or MailChimp mailing lists for newsletters and such.

General Information

MailChimp

AcyMailing

Use this screen to setup ABPro with access information for adding customers to your MailChimp and AcyMailing lists. When enabled, ABPro will call MailChimp or AcyMailing and insert a new mailing list user as part of the appointment booking process.

Note:
Changing the status of a booking has no effect on MailChimp or AcyMailing.
Cancelling a booking **does not** remove a list entry.
ABPro never removes list entries from MailChimp or AcyMailing.

General Information
MailChimp
AcyMailing

You must have a MailChimp account to use this option. See <http://mailchimp.com/>

Enable MailCimp:	<input type="text" value="No"/>	
API Key:	<input type="text" value="296a7c2e92b794d0059c77f3b97bea"/>	Get this from your MailChimp Account, under 'Extras'.
Split Name:	<input type="text" value="Yes"/>	MailChimp supports Firstname/Lastname but ABPro, like Joomla, only captures a 'Name'. If you set this to Yes, ABPro will attempt to split the name into first and last when adding the customer to your MailChimp list.
Default List:	<input type="text" value="ABPro Integration"/>	Select a default MailChimp list to receive new customers. You can override this at the ABPro resource level in the resource setup screen. Note: ABPro uses the API Key to fetch lists so when you first setup this screen you will need to enter your API Key, Save, then re-open the screen to see your lists.
Send Welcome:	<input type="text" value="Yes"/>	If set to Yes, ABPro will set the 'Send Welcome' flag in the MailChimp API call to add a user.

You must have a MailChimp account in order for ABPro to add people to MailChimp.

Enable MailChimp: Enable ABPro to add booking customers to a MailChimp list.

API Key: This key is required for ABPro to access you MailChimp and add people to a list. It can be found on your MailChimp account page under 'Extras'.

Split Name: MailChimp supports Firstname/Lastname but ABPro, like Joomla, only captures a 'Name'. If you set this to Yes, ABPro will *attempt* to split the name into first and last when adding the customer to your MailChimp list.

Default List: Select a default MailChimp list to receive new customers. You can override this at the ABPro resource level in the resource setup screen. Note: ABPro uses the API Key to fetch lists so when you first setup this screen you will need to enter your API Key, Save, then re-open the screen to see your lists.

Send Welcome: If set to Yes, ABPro will set the 'Send Welcome' flag in the MailChimp API call to add a user.

AcyMailing

You must have the AcyMailing Joomla component installed to use this feature.

The screenshot shows the 'ABPro - Email Marketing' configuration page within a Joomla! interface. The page has a dark blue header with the title and Joomla! logo. Below the header is a toolbar with 'Save & Close', 'Cancel', and 'Help' buttons. A left sidebar contains a list of configuration categories, with 'Email Marketing' highlighted. The main content area has three tabs: 'General Information', 'MailChimp', and 'AcyMailing'. The 'AcyMailing' tab is active, displaying a message: 'You must have the AcyMailing component installed to use this option. See <https://www.acyba.com/acymailing.html/>'. Below this message are two configuration options: 'Enable AcyMailing:' with a dropdown menu set to 'Yes', and 'Default List:' with a dropdown menu set to 'Newsletters'. A descriptive text next to the 'Default List' dropdown states: 'Select a default AcyMailing list to receive new customers. You can override this at the ABPro resource level in the resource setup screen.' At the bottom of the main content area, a footer line reads: 'Appointment Booking Pro Ver. 3.0.5 - Copyright 2008-2014 - Soft Ventures, Inc.'

Enable AcyMailing: Enable ABPro to add booking customers to a AcyMailing list.

Default List: Select a default AcyMailing list to receive new customers.

You can override this at the ABPro resource level in the resource setup screen.

Edit Files

This screen allows the administrator to change the component's CSS and/or language file from within the Administrator area.

The language file can be used for translation of the component's front-end to another language or merely to **change labels on front-end screens**. The language file ONLY relates to front-end screens not the administrator screens.

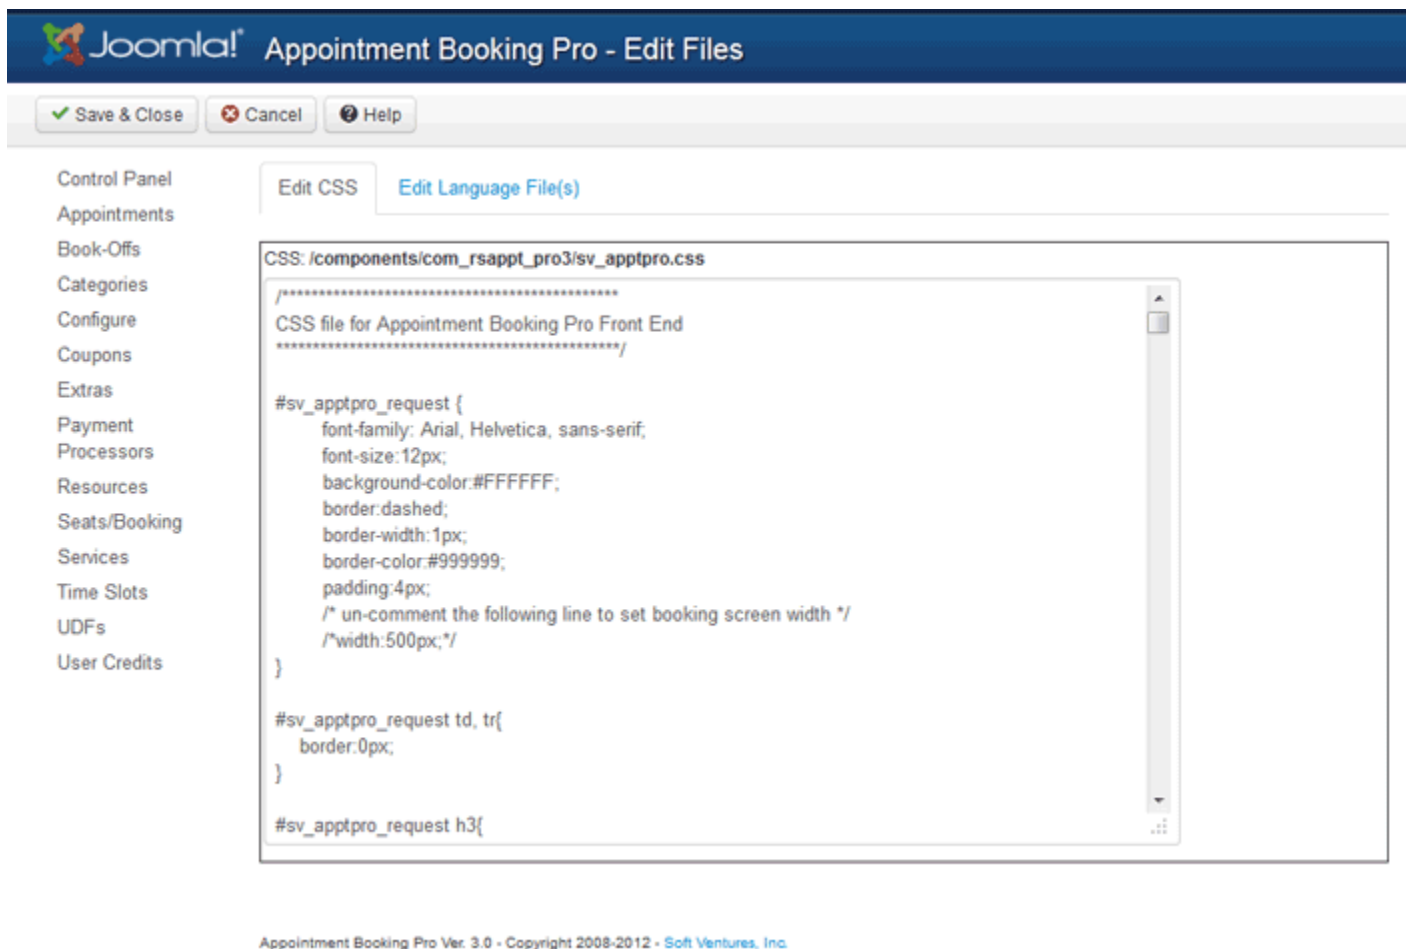

Toolbar Icons

Save: Save changes.

Edit CSS Edit Language File(s)

CSS: /components/com_rsappt_pro3/sv_apptpro.css

```

/*****
CSS file for Appointment Booking Pro Front End
*****/

#sv_apptpro_request {
    font-family: Arial, Helvetica, sans-serif;
    font-size:12px;
    background-color:#FFFFFF;
    border:dashed;
    border-width:1px;
    border-color:#999999;
    padding:4px;
    /* un-comment the following line to set booking screen width */
    /*width:500px;*/
}

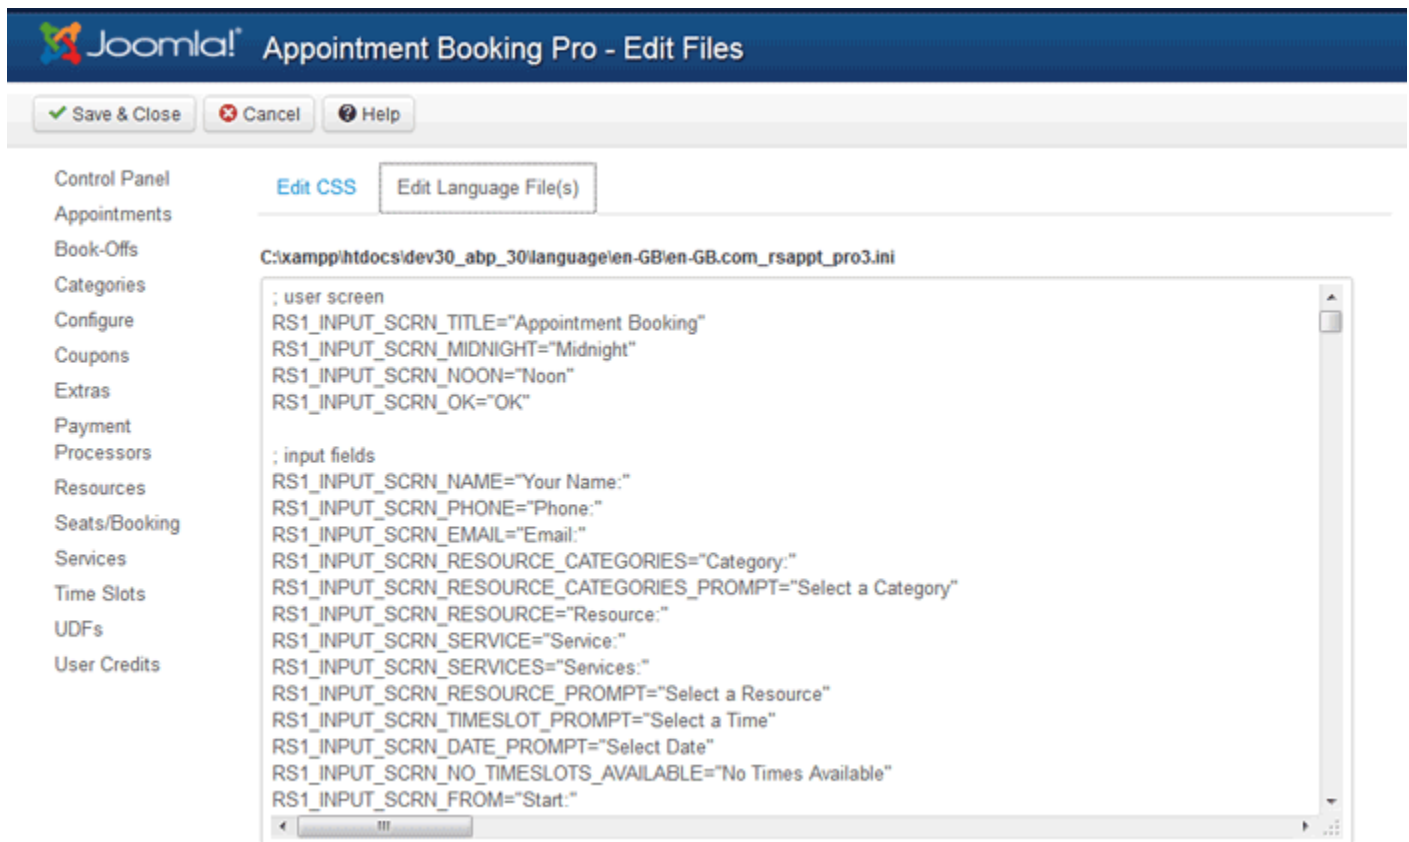

#sv_apptpro_request td, tr{
    border:0px;
}

#sv_apptpro_request h3{

```

Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - Soft Ventures, Inc.

Edit Language File: This tab displays the component's English language file. Make changes as desired then click 'Save'.

The file format is [key]=[value]

Change ONLY the value, or, the text AFTER the "=".

All values must be in quotes.

Use caution. A single extra or missing quote will cause Joomla to reject the language file.

See also http://docs.joomla.org/Specification_of_language_files

Backup/Restore

The Backup and Restore functions built into the Appointment Booking component are primarily intended for use when upgrading from one version to another. All component data is saved to backup tables in the database. Old backup tables are removed before new ones are created.

User Credits

The Backup and Restore functions built into the Appointment Booking component are primarily intended for use when upgrading from one version to another.
All component data is saved to backup tables in the database. Old backup tables are removed before new ones are created.

The sequence of actions to upgrade from one version to another is this:
Backup data -> Uninstall ABPro component -> Install new version -> Restore data
Warning! Backup/Restore WILL NOT RETAIN YOUR CSS file across an uninstall/reinstall because Joomla deletes the directory, you must manually backup and restore sv_apptpro.css.
If you have added language file keys you must either include the language file in your backup/restore OR manually re-add your language file keys after restore.
ONLY the ENGLISH language file is touched in backup/restore.

Backup Now!

☐ Include Error Log* in Backup

☐ Include Reminder Log* in Backup

☐ Include Language File** in Backup

Restore Now!

☐ Include Error Log* in Restore

☐ Include Reminder Log* in Restore

☐ Include Language File** in Restore

☐ Backfill Category IDs*** in Restore

☐ Restore from an ABPro 2.x backup

* The error and reminder log files can be very large and should only be backed up if you really need the information brought to the new version.

** Not recommended unless you have made a lot of changes to the standard language file. If you are installing a new version of the component that has additional language file keys you will need to manually add them.
/language/en-GB/en-GB.com_rsappt_pro3.ini

*** If restoring from a version prior to ABPro 2.0.3 beta 4 AND you use categories, this option will bring category information from all old bookings.

Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - Soft Ventures, Inc.

The sequence of actions to upgrade from one version to another is this:

Backup data -> Uninstall RB component -> Install new version -> Restore data

With database tables you can merge old data into new table structures. This cannot be done with the language file because it is a plain text file. If you are doing a backup/restore because you are moving from one ABPro version to the next, the new version will have a new language file with, possibly, new language keys defined. If you choose to backup/restore the language file it will overwrite the new file with your old one. That will keep all you old modifications but it will also remove any new language keys. You will need to manually re-apply these keys.

135

Help: Opens the help screen.

Actions

Backup Now! : This will create backup database tables and copy your current settings to them. If the backup tables already exist, they will be overwritten. If a table has no data it will not be copied. This is to prevent accidentally backing up empty tables over your real backup.

Restore Now! : This will look to see if there are backup tables and if there are, it will replace the contents of the production tables with the contents of the back tables. If a backup table has no data in it it will not be copied. This is to prevent accidentally restoring up empty tables over your production tables.

Restore from an ABPro 2.0.x backup: Restore data and settings from ABPro version 2.0.x _backup files.

Include Error log in Backup/Restore: These can get large and may be of little value brought forward on an upgrade.

Include Reminder log in Backup/Restore: These can get large and may be of little value brought forward on an upgrade.

Include Language File in Backup : Make a backup copy of your English language file.

Include Language File in Restore : Restore a previously created English language file backup.

Backfill Category IDs : Select this if you are upgrading from a version prior to ABPro 2.0.3 beta 4.

Error Log

Check here if you are experiencing problems. This is also a good place to look if PayPal does not work correctly.

Reminder Log

Originally added as a way to keep track of reminders sent, especially by automated cron jobs, it is also used now for logging SMS text messages.

Description: Description of the entry.

Timestamp: When it happened.

About

License information

SMS Processors

ABPro supports three SMS service providers:

1. Clickatell.com (USA and Canada only)
2. EZTexting.com
3. Twilio.com

General Settings

The screenshot shows the Joomla! ABPro - SMS Processors General Settings interface. The top bar includes the Joomla! logo and the title 'ABPro - SMS Processors'. Below the bar are buttons for 'Save & Close', 'Cancel', and 'Help'. A left sidebar lists various settings categories, with 'SMS Processors' highlighted. The main content area is titled 'ABPro sends two types of SMS messages:' and lists 'Reminders - to the customer' and 'Notifications - to Admin or the Resource Admin.' Below this are tabs for 'General Settings', 'Clickatell', 'EzTexting', and 'Twilio'. The 'General Settings' tab is active, showing three settings: 'SMS to Admin only' (set to 'Yes'), 'Default Dialing Code' (set to 'USA - 1'), and 'Show Code List' (set to 'No'). Each setting has a dropdown menu and a descriptive text box. The footer of the interface reads 'Appointment Booking Pro Ver. 3.0.2 - Copyright 2008-2013 - Soft Ventures, Inc.'

Setting	Value	Description
SMS to Admin only:	Yes	If set to Yes, the SMS prompt on the booking screen with NOT be displayed. Only SMS to admin or resource admin will be generated.
Default Dialing Code:	USA - 1	This is your international dialing code. Example: Anywhere in Canada or USA = 1
Show Code List:	No	Yes=Show the dropdown list of country dial codes on the booking screen. You would only do this if your customer might be outside your dialing code. (country code, not area code)

When you enable an SMS processor the booking screen will show a box for the customer to enter their cell phone number and a box for them to check to 'opt-in' to SMS. SMS carriers are very concerned about SMS SPAM and require the customer specifically indicate they **want** to receive SMS from you.

SMS to Admin only – Setting this to Yes will prevent then SMS phone and checkbox from being displayed to the customer. It is used when you want SMS to be sent to resource admins (notifications) but not customers (reminders).

Default Dialing Code – Enter the country code applicable to your location.

Show Code List – Yes if you wish to show a list of country codes to the customer on the booking screen.

SMS – Clickatell

ABPro sends two types of SMS messages:

- Reminders - to the customer
- Notifications - to Admin or the Resource Admin.

General Settings

Clickatell

EzTexting

Twilio

*** Non-USA ONLY *** To use [Clickatell.com](#) you need to have an HTTP/S account with them. The values below will be found on your Clickatell.com 'Manage My Products' screen.

Enable Clickatell:

No

Yes = Messages will be sent via sms text messaging through your Clickatell.com account.
No = No text messaging reminders.
Do Not enable multiple SMS processors.

Login User:

Your Clickatell.com login so ABPro can connect and send SMS reminders.

Login Password:

Your Clickatell.com login so ABPro can connect and send SMS reminders.

API_ID:

This ID will be supplied by Clickatell.com when you open an HTTP/S account.

SENDER_ID:

[Optional] If you enter your Clickatell registered sender ID the SMS will show as coming from you.

Enable Unicode:

No

Set to Yes for non-English sites to support special character sets.

This screen is where you set ABPro to use Clickatell.com for sending SMS text messages.

You must have an account with Clickatell.com.

The data for this screen comes from your Clickatell.com account's 'Manage My Products' page.

You should ensure your account is functioning properly before incorporating it into ABPro.

DO NOT enable multiple SMS processors.

This service should be used if you are outside of the United States. (Clickatell no longer works in the USA)

***** USA & Canada ONLY ***** To use [EzTexting](#) you need to have an account with them. You will need to request 'API access' for ABPro to talk to their service.

Enable EzTexting: Yes = Messages will be sent via sms text messaging through your EzTexting.com account.
No = No text messaging reminders.
Do Not enable multiple SMS processors.

Login User: Your EzTexting.com login so ABPro can connect and send SMS reminders.

Login Password: Your EzTexting.com login so ABPro can connect and send SMS reminders.

Appointment Booking Pro Ver. 3.0.2 - Copyright 2008-2013 - [Soft Ventures, Inc.](#)

This screen is where you set ABPro to use EzTexting.com for sending SMS text messages.

You must have an account with EzTexting.com.

You should ensure your account is functioning properly before incorporating it into ABPro.

DO NOT enable multiple SMS processors.

This service can be used for USA or Canada only.

The screenshot shows the Joomla! ABPro - SMS Processors configuration interface. At the top, there's a Joomla! logo and the title 'ABPro - SMS Processors'. Below the title are three buttons: 'Save & Close', 'Cancel', and 'Help'. On the left is a sidebar menu with various options, with 'SMS Processors' highlighted. The main content area has a sub-header 'ABPro sends two types of SMS messages:' followed by a bulleted list: 'Reminders - to the customer' and 'Notifications - to Admin or the Resource Admin.' Below this is a tabbed interface with four tabs: 'General Settings', 'Clickatell', 'EzTexting', and 'Twilio' (which is active). The Twilio tab contains instructions: 'To use Twilio.com you need to have an account with them. The values below will be found on your Twilio.com 'Account' screen. You will also need to upload the twilio-php helper library to your web server. See setup instructions at appointmentbookingpro.com'. There are three main configuration sections: 1. 'Enable Twilio:' with a dropdown menu set to 'No' and explanatory text: 'Yes = Messages will be sent via sms text messaging through your Twilio.com account. No = No text messaging reminders. Do Not enable multiple SMS processors.' 2. 'Account SID:' with a text input field containing a masked value and the note: 'This is from your Twilio.com Account screen.' 3. 'Auth Token:' with a text input field containing a masked value and the note: 'This is from your Twilio.com Account screen.' At the bottom, there's a 'Twilio Phone Number:' section with a text input field containing a masked value and the note: 'With Twilio you need to buy a phone number, enter it here. For testing you can get a free number from them.' The footer of the page reads: 'Appointment Booking Pro Ver. 3.0.2 - Copyright 2008-2013 - Soft Ventures, Inc.'

ABPro sends two types of SMS messages:

- Reminders - to the customer
- Notifications - to Admin or the Resource Admin.

General Settings Clickatell EzTexting **Twilio**

To use [Twilio.com](https://www.twilio.com) you need to have an account with them. The values below will be found on your Twilio.com 'Account' screen. You will also need to upload the twilio-php helper library to your web server. See setup instructions at appointmentbookingpro.com

Enable Twilio: Yes = Messages will be sent via sms text messaging through your Twilio.com account.
No = No text messaging reminders.
Do Not enable multiple SMS processors.

Account SID: This is from your Twilio.com Account screen.

Auth Token: This is from your Twilio.com Account screen.

Twilio Phone Number: With Twilio you need to buy a phone number, enter it here. For testing you can get a free number from them.

Appointment Booking Pro Ver. 3.0.2 - Copyright 2008-2013 - [Soft Ventures, Inc.](https://www.softventures.com)

This screen is where you set ABPro to use Twilio.com for sending SMS text messages.

You must have an account with Twilio.com.

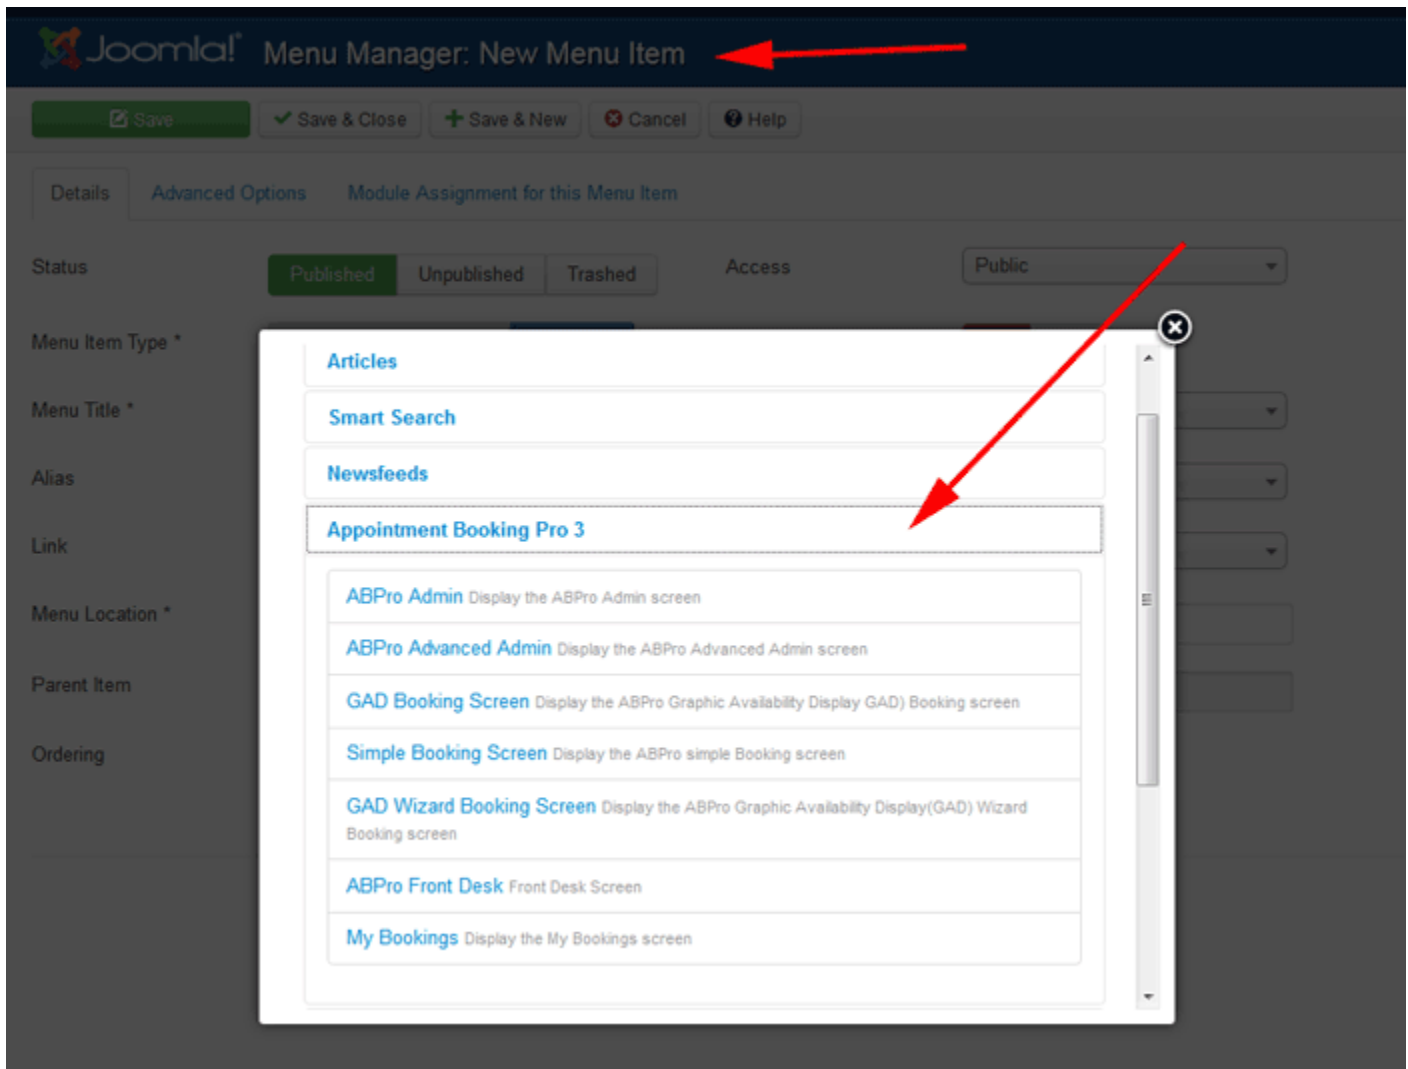

You should ensure your account is functioning properly before incorporating it into ABPro.

DO NOT enable multiple SMS processors.

Front End Screens

To access front end screen you need to assign a menu to them.

Normally the booking screen(s) would be on the Joomla 'Main Menu' and the others would be on the 'User Menu' (only accessible after login)

Booking Screen

The booking screen's appearance will vary greatly depending on what options you have configured in. The screen here is fairly basic, it has a few UDFs and uses categories.

The screenshot shows a web form titled "Appointment Booking". At the top, there is a header text area with the placeholder "Enter header text here - clear for no header". Below this are several input fields: "Your Name:", "Phone:", "Email:", and "Refreshments:". A note "(ex: coffee for 101)" is placed above the "Favorite Fruit:" section, which includes three radio button options: "Apples" (selected), "Oranges", and "Bananas". Below this is a "Sex:" dropdown menu currently set to "Male", with a "help here" link. The "Category:" dropdown is set to "Select a Category". The "Resource:" field is empty. A "Submit Request" button is located below the "Resource:" field. At the bottom, there is a footer text area with the placeholder "Enter footer text here - clear for no footer". The footer text "powered by AppointmentBookingPro.com v1.4" is visible at the very bottom.

Select a Category to fetch Resources..

This screenshot shows the "Category:" dropdown menu open, displaying a list of options: "Select a Category", "Select a Category", "Calgary Office" (highlighted), and "Edmonton Office". The "Resource:" field is also visible, showing "Select a Resource". A "Select a Resource Category" button is located to the right of the dropdown. The footer text "powered by AppointmentBookingPro.com v1.4" is visible at the bottom.

This screenshot shows the "Resource:" dropdown menu open, displaying a list of options: "Select a Resource", "Select a Resource", "Dr Foo", "new guy" (highlighted), "Mr Smith", and "Dr O'Bar". The "Category:" dropdown is now set to "Calgary Office". The footer text "powered by AppointmentBookingPro.com v1.4" is visible at the bottom.

Then it fetches the available dates..

powered by AppointmentBookingPro.com v1.4

GAD Booking Screen

The booking screen's appearance will vary greatly depending on what options you have configured in. The screen here is fairly basic, it has a few UDFs and uses categories.

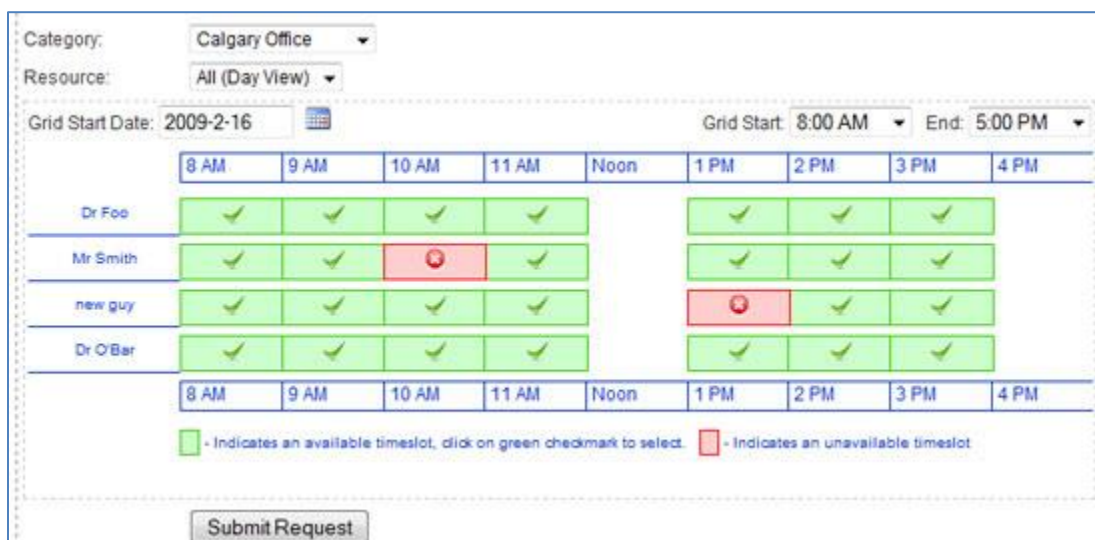

The form is titled "Appointment Booking" and includes fields for "Your Name:", "Phone:", "Email:", "Refreshments:", "Favorite Fruit:" (with radio buttons for Apples, Oranges, Bananas), "Sex:" (with a dropdown menu), "Category:" (with a dropdown menu), and "Resource:". There is a "Submit Request" button. The form also includes placeholder text for header and footer.

Again, category..

This image shows a close-up of the "Category:" dropdown menu. The dropdown is open, showing options: "Select a Category", "Select a Category", "Calgary Office", and "Edmonton Office". The "Calgary Office" option is highlighted. Below the dropdown is a "Select a Resource Category" button.

If you have multiple resources it will show in day mode – all resources for one day.

This image shows the booking screen in day mode. The "Category:" dropdown is set to "Calgary Office" and the "Resource:" dropdown is set to "All (Day View)". The "Grid Start Date" is "2009-2-16". The "Grid Start" is "8:00 AM" and the "End" is "5:00 PM". The grid shows time slots from 8 AM to 4 PM. The resources listed are Dr. Foo, Mr. Smith, new guy, and Dr. O'Bar. The grid shows available timeslots in green and unavailable timeslots in red. A legend at the bottom indicates that green checkmarks indicate available timeslots and red squares indicate unavailable timeslots.

	8 AM	9 AM	10 AM	11 AM	Noon	1 PM	2 PM	3 PM	4 PM
Dr. Foo	✓	✓	✓	✓		✓	✓	✓	
Mr. Smith	✓	✓	✗	✓		✓	✓	✓	
new guy	✓	✓	✓	✓		✗	✓	✓	
Dr. O'Bar	✓	✓	✓	✓		✓	✓	✓	

Things to note; the grid date selectable by the customer as is the time range.

Available timeslots are green and clickable (can be changed in css). To select a timeslot click a green box.

My Bookings

IF you have Require Login = Yes, a booking can only be made by a registered user. If a logged in user makes a booking, ABPro will record the UserID with the booking. This means you can offer them a 'My Bookings' screen if you like.

My Appointment Bookings

John Doe

Date Filter: 2012-11-02   Clear Dates

Select Status 

Resource	Date 	From	Until	Seats		Status
Dr Bar	Fri Nov 2, 2012	9:00 AM	10:00 AM	1	Cancel Now	Accepted

Credit Activity

As bookings are made they will appear below. This list shows the 20 most recent credit activity items.

Comment	Booking	Increase	Decrease	Balance	Operator	Timestamp
Credit used for booking	Nov 2 / 1:00 PM - Bus Tour desc		21.23	17.02	John Doe	2012-11-01 14:48:23
Credit used for booking	Nov 2 / 9:00 AM - Dr Bar desc		11.75	38.25	John Doe	2012-11-01 14:47:33
Admin EDIT, balance now: 50				50.00	Super User	2012-11-01 14:39:51

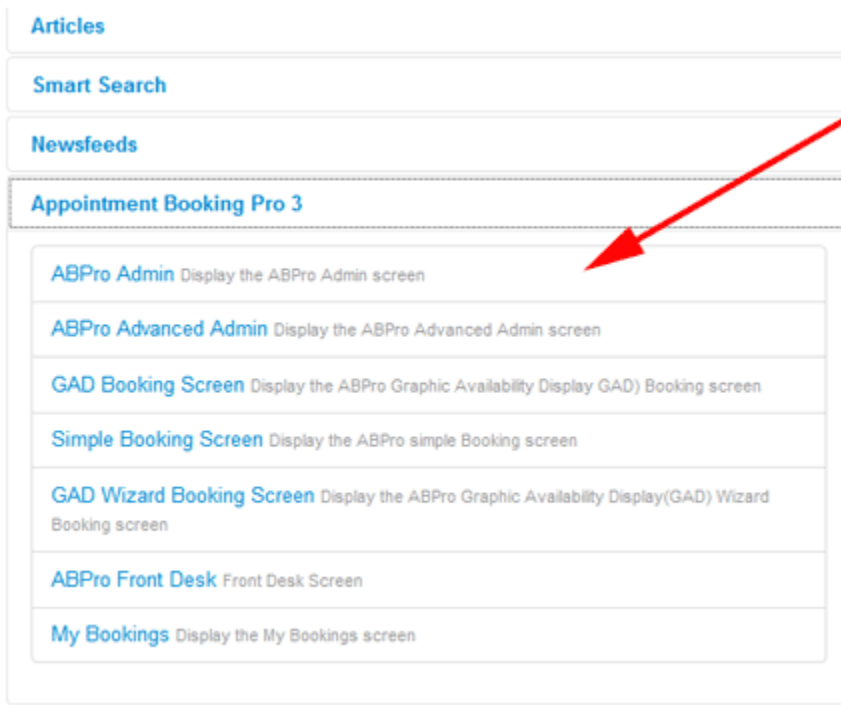

Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - [Soft Ventures, Inc.](#)

The 'Cancel Now' link will only appear if you have 'Allow Cancel'=Yes, see the Configuration section of this guide.

The top section shows bookings, the lower section shows User Credit activity.

Front End Admin

The Front End Admin screen is activated by a menu call...

You can delegate administration duties to other users. Rather than having to give them access to the Joomla Admin back end, which can be intimidating, ABPro offers two front-end admin screens.

To use these a user must be designated as a 'Resource Administrator', see the Resource setup for details on how to do that.

The simple Admin screen has very basic capabilities.

Appointment Booking Admin

See the back end Appointment Detail section of this guide for information of what the various fields mean.

Front End Advanced Admin

If you wish to give your resources more control, such as setting timeslots and book-off for the resources they administer, you can give them access to the Advanced Admin screen.

ID	Name	Email	Resource	Date/Time	Service	Status	Pmt
1466	John Doe	jd@softventures.com	Dr Bar	Fri Nov 2 09:00	60 Minute	Accepted	Paid
1467	John Doe	jd@softventures.com	Bus Tour	Fri Nov 2 13:00		Accepted	Paid
1468	Super User	support@softventures.com	Dr Bar	Thu Nov 8 13:00	60 Minute	Accepted	Paid

Appointment Booking Pro Ver. 3.0 - Copyright 2008-2012 - Soft Ventures, Inc.

This allows the resource administrator to manage the day to day operations.

Each tab corresponds to the respective back end administration function but is limited, where applicable, to only the resources this user has been assigned to administer.

Tabs can be turned on/off in the ABPro Configure screen, Front End Admin tab.

Note: Categories is not available here as category is above resource in the hierarchy and can only be managed by the back end administrator.

The Advanced Admin front end screen is activated by a menu call...

Front Desk

This screen is new in version 1.4 and offered the resource administrator 3 views of the upcoming appointments.

The front desk screen is for staff to use and should not be shown to the public.

You must be a resource administrator to use the Front Desk. Only bookings for resources that you are designated as resource administrator will appear in the screens. Use the resource setup screen to set who is a resource administrator. To set resource administrators, use the Resource setup screen, about ½ way down the screen is where you assign administrators.

See also “Using the Front Desk” later in this guide.

Email Reminders cron module

Overview

Web applications are driven by people requesting pages so they cannot wake up in night and automatically send out reminders.

However, the operating system that Joomla is running under does support that sort of thing via what is called cron jobs, or scheduled tasks.

I have made a module that uses cron to send automated reminders. This requires cron be available from you hosting company, most allow the use of cron jobs but some do not.

The module mod_sv_reminders, an add-on to ABPro, does not do automated email reminders by itself.

It installs a file, reminders_cron.php, that can be called by your server's cron facility and when it is, it will look at the module parameters and send email reminders to accepted bookings. The module needs to be 'Published' but need not appear on any site page. It is really just a way to let you set parameters for the reminders_cron.php to read at runtime.

Installation, setup and test

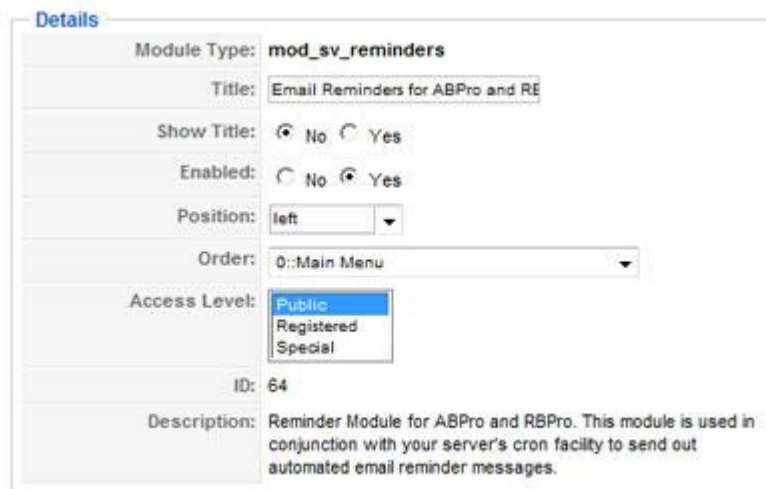

Step 1 Download and install the module

Download from link above then install as with any other module - nothing special here.

Step 2 Module Setup

Set **Enabled** = Yes

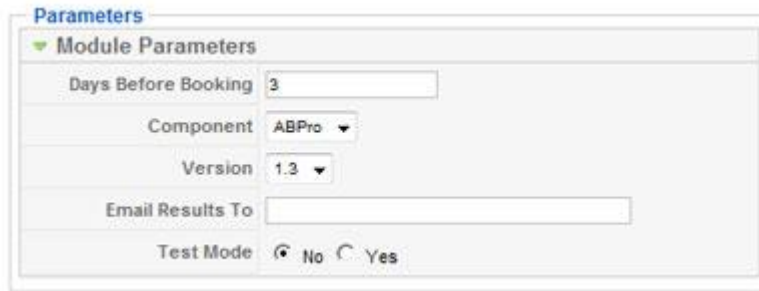

and **Show Title** = No

The screenshot shows the 'Details' tab of the Joomla! Module Manager for the module 'mod_sv_reminders'. The 'Title' is 'Email Reminders for ABPro and RE'. The 'Show Title' option is set to 'No' (selected with a radio button). The 'Enabled' option is set to 'Yes' (selected with a radio button). The 'Position' is set to 'left' in a dropdown menu. The 'Order' is set to '0::Main Menu' in a dropdown menu. The 'Access Level' dropdown menu is open, showing 'Public' (selected), 'Registered', and 'Special'. The 'ID' is 64. The 'Description' is 'Reminder Module for ABPro and RBPro. This module is used in conjunction with your server's cron facility to send out automated email reminder messages.'

You can set the Menus to None as it does not need to appear on any page.

Parameters

The screenshot shows a web-based configuration interface titled "Parameters". Under the "Module Parameters" section, there are several input fields and a radio button group. The "Days Before Booking" field contains the number "3". The "Component" dropdown menu is set to "ABPro". The "Version" dropdown menu is set to "1.3". The "Email Results To" field is empty. The "Test Mode" section has two radio buttons, "No" and "Yes", with "No" being selected.

Days Before Booking:

Enter a number days in advance of the booking time that you wish the email to be sent.

You can have multiple days separated by comma.

Example: 3 = send a reminder 3 days before the booking.

Example: 5,3 = send a reminder 5 days before AND send a reminder 3 days before

This field must be integer value(s) - no 3.5 days.

Component:

Select either ABPro or RBPro

Version:

For future use, currently only supports version 1.3 of each component.

Email Results To:

You can enter an email address that will receive a status report after each cron run.

If left blank the report will be sent to the email address in the component's (ABPro or RBPro) Configure / MailTO setting.

Test Mode:

For testing, see below.

Step 3 Cron Setup

After you have the module installed and configured, your next step is to setup or schedule the cron job at your webserver. Each hosting provider will have their own unique process for exactly how to do this. But in each case, you need to create and name a new Cron job, define how often the Cron job should run (this should be once per day), and point the Cron job to the correct path to the reminders_cron.php file. Below are 2 video tutorials that will demonstrate the setup procedures for common hosts.

You need to know the physical path, on the server, to the file reminders_cron.php

There is a file included in the module to do this for you. From your browser issue the request:

http://yoursite.com/modules/mod_sv_reminders/show_path.php

You will get back a screen like this..

```
Path for cron job: /home/content/██████████/html/test_J15N/modules/mod_sv_reminders/reminders_cron.php
CPanel cron command: /usr/bin/php '/home/content/██████████/html/test_J15N/modules/mod_sv_reminders/reminders_cron.php'
Note: some hosts may have different path for php, ie: something other than '/usr/bin/php'
```

Cron setup tutorials

Hosting sites that use [CPanel](#)

Setup on [GoDaddy.com](#)

Step 4 Testing

The file reminders_cron.php has some code at the beginning to prevent it from being called interactively by a malicious user.

For testing you can set 'Test Mode' (above) to Yes and call reminders_cron.php from your browser like:

http://yoursite.com/modules/mod_sv_reminders/reminders_cron.php

When calling as above, you will just get a blank screen and the results will be emailed out.

Google Calendar and ABPro

This section covers the requirements and setup for using Google Calendar with ABPro.

Requirements

- A Google Account for creating and using Google Calendars.
- PHP 5.1.4 or higher
- Google Data PHP Client Library (from Zend)
- ABPro 1.4.1 beta 5 or higher

Setup GData library

You will need to download the Google Data PHP Client Library and upload it to your server. The Google Data PHP Client Library is part of the Zend Framework but can also be installed standalone.

First get the Google Data PHP Client Library from:

<http://framework.zend.com/download/gdata/>

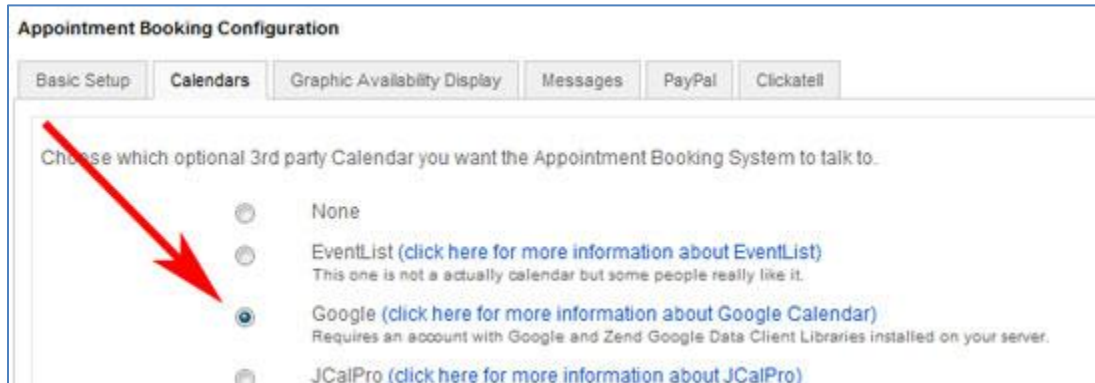

The download contains several folders but the only one you need is the **/library** one. Extract the 'library' folder from the downloaded zip file and **ftp it up to your server**. You **MUST** put the /library folder in the top level Joomla directory. This is because rather than trying to change your php include_path with php.ini or .htaccess, ABPro will just look in that location.

Setup ABPro

You need to do two things; tell ABPro you want to use Google Calendar and set each resource so it can access a Google Calendar.

Choose **Google Calendar** in ABPro Admin Configure / Calendars

Appointment Booking Configuration

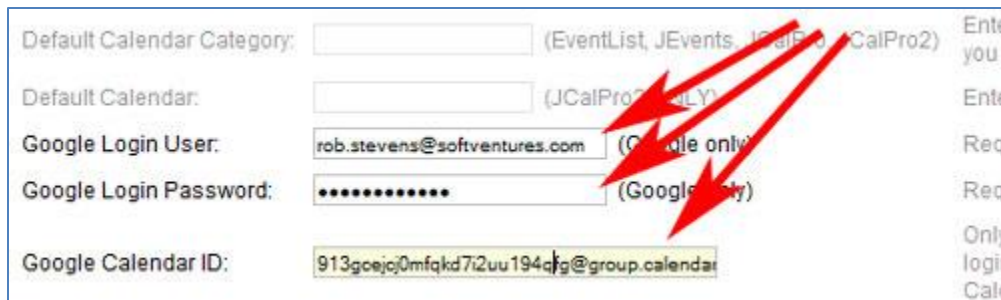

Basic Setup | **Calendars** | Graphic Availability Display | Messages | PayPal | Clickatell

Choose which optional 3rd party Calendar you want the Appointment Booking System to talk to.

- ☐ None
- ☐ EventList ([click here for more information about EventList](#))
This one is not a actually calendar but some people really like it.
- ☒ Google ([click here for more information about Google Calendar](#))
Requires an account with Google and Zend Google Data Client Libraries installed on your server.
- ☐ JCalPro ([click here for more information about JCalPro](#))

Now **for each ABPro resource** set what Google Calendar you want bookings added to.

In the Resource setup screen enter Google Login information and calendar ID.

Default Calendar Category: (EventList, JEvents, JCalPro, JCalPro2) Enter you a

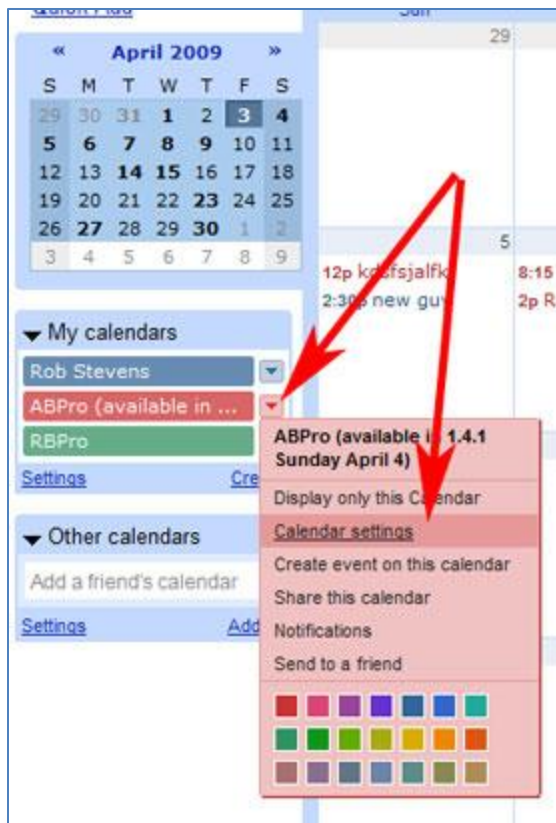

Default Calendar: (JCalPro2 ONLY) Enter

Google Login User: (Google only) Req

Google Login Password: (Google only) Req

Google Calendar ID: Only login Cale

To get the Calendar ID, open the Calendar settings screen in Google.

In the Calendar Settings screen near the bottom you will see the Calendar Address section and on the right the Calendar ID. For your primary Google Calendar this will be the same as your Google login ID but for secondary calendars it will be a long cryptic value.

Now new bookings for this resource will be added to your Google Calendar.

As with all 3rd party calendars the communication is one-way only. Changes made in your Google Calendar will have no effect on ABPro.

Adding a Google Calendar Menu Item

A simple way to display your Google Calendar is with a 'Wrapper'.

Add a new menu item of the type Wrapper.

In the Wrapper setup screen enter the HTML link from Google into the 'Wrapper URL' field.

Menu Item: [Edit]

Save Apply Close Help

Menu Item Type
Wrapper
 Displays an iframe to wrap an external page or site into Joomla!

Menu Item Details

ID:	107
Title:	Google Calendar
Alias:	google-calendar
Link:	index.php?option=com_wrapper&view=wrapper

Parameters (Basic)

Wrapper URL:

Scrollbars: ☐ No ☐ Yes ☒ Auto

Width:

Height:

Parameters Advanced

Parameters (System)

You get the link URL from your Google Calendar, Calendar Settings page.

Auto-accept invitations ☐ Auto-accept invitations that do not conflict ☐

Calendar Address

Please use the following address to access your calendar in any web browser.

<http://www.google.com/calendar/embed?src=913gcejc0mfqkd7i2uu194qfg%40group.calendar.google.com&ctz=America/Edmonton>

You can embed Google Calendar in your website or blog. Use our [configuration tool](#) to generate the HTML you need.

OK

Calendar Address: (Calendar ID: 913gcejc0mfqkd7i2uu194qfg@group.calendar.google.com)

This is the address for your calendar. No one can use this link unless you have made your calendar public.

That's it.

Seats & Extras in Google Calendar

You can have the Google calendar insert contain Seats and Extras...

In the Configure screen, Calendars tab..

For Seats...

textbox types as *anything* the user enters will appear in the calendar.

Event Body:

```
<b>[resource], [resource_service]</b> has been booked for <b><i>[requester name]</i></b> for this date/time:<br>
<b>[startdate] [starttime]</b> to <b>[enddate] [endtime]</b>
<br>Adult: [Adult]
<br>Child: [Child]
```

This will appear in the calendar detail area. You can use the tokens as listed on the 'Messages' tab.

Daylight Savings

☐ Yes ☐ No

ARPro stores times in local time but some 3rd party calendars store

Will produce..

[illegible]

And for Extras ..

continued upward and sideways into the next century and then upward in the century.

Event Body:

```
[resource] has been booked for [requester name]
<br/>Blue Widgets:<i>[Blue Widgets]</i>
```

This will appear in the calendar detail area. You can use the tokens as listed on the 'Messages' tab.

Daylight Savings

✓	
---	--

ABPro stores times in local time but some 3rd party calendars store

Will produce..

Administrator

When: Wed, December 2, 12pm – 1pm

Description: Resource 1 has been booked for Administrator
Blue Widgets:3

[more details»](#) [copy to my calendar»](#)

Calendar Grid:

Date	Time	Resource
Dec 1	9am	kukkj
Dec 1	9am	Rofaulo
Dec 1	12pm	Administrat
Dec 2	9am	Vallagrupper
Dec 2	10am	K
Dec 2	11am	DDD
Dec 3	10am	Mike
Dec 3	1pm	abcd

Limitation

The technique for doing this is very simple and has no logic for limiting inserts based on resource. That means that if you have 3 *different* 'Adult' seat types for 3 different resources, the insert cannot show only the Adult seats for the resource the customer chose, it must show all.

Community Builder and ABPro

Overview

ABPro can be set to pull user information from their CB profile, into a booking screen.

This is done by setting up ABPro UDFs (user defined fields) for your booking screen and telling ABPro to pre-fetch data for these fields from the user's CB profile.

UDF Settings for CB

 **User Defined Field Detail**

This screen is used to create or edit User Defined Fields.

ID:	10		
Screen Label:	City		
Type:	Textbox		
Size:	40	(only applies if control type = Textbox)	
Rows:	2	(only applies if control type = Textbox)	
Columns:	40	(only applies if control type = Textbox)	
Radio Buttons or List Items:	<div></div> Comma separated radio button or dropdown list values, use "[d]" to indicate default selection. Example: "Apples, [d]Oranges, Bananas". MAX 255 characters		
Required Field:	No (only applies if control type = Textbox, Textarea or Checkbox)		
Help Text:	Enter your city		
Tooltip:			

If you are using Community Builder and wish to populate an ABPro UDF field from a CB profile field, set the field mapping here. Only Textbox or Textarea fields can pre-fill from Community Builder.

CB Profile Field:	city
Read Only:	Yes Set to Yes if you do not want visitor to change the value. Note: Changes, if allowed, are never written back to CB. Changes are only stored in the ABPro booking.

Display Order:	6

middlename
name
occupation
phone
state
username
zipcode

Select the CB Profile field from the dropdown list. This list is created from your CB profile table and will only be populated if you have CB installed.

You can also set the field to be read only if you do not want the person doing a booking to be able to change the values.

Note: Changes, if allowed, are **never written back to CB**. Changes are only stored in the ABPro booking.

JomSocial and ABPro

Overview

ABPro can be set to pull user information from their JomSocial profile, into a booking screen.

This is done by setting up ABPro UDFs (user defined fields) for your booking screen and telling ABPro to pre-fetch data for these fields from the user's JomSocial profile.

UDF Settings for JomSocial

User Defined Field Detail

This screen is used to create or edit User Defined Fields.

Rows: 2 (only applies if control type = Textbox)

Columns: 40 (only applies if control type = Textbox)

Radio Buttons or List Items: Comma separated radio button or dropdown list values, use "(d)" to indicate default selection. Example: "Apples, (d)Oranges, Bananas", MAX 255 characters

Required Field: No (only applies if control type = Textbox, Textarea or Checkbox)

Help Text:

Tooltip:

You can assign this UDF to one or more resources. If NOT assigned, it will be shown for ALL.

Resources: Resource 1 Add >> << Remove Empty = ALL

Select one or more resources that this UDF applies to. If you wish this UDF to be shown for ALL resources, do not select any.

If you are using Community Builder and wish to populate an ABPro UDF field from a CB profile field, set the field mapping here. Only Textbox or Textarea fields can pre-fill from Community Builder.

CB Profile Field: Select a CB profile value

Read Only: No Set to Yes if you do not want visitor to change the value. Note: Changes, if allowed, are never written back to CB. Changes are only stored in the ABPro booking.

If you are using JomSocial and wish to populate an ABPro UDF field from a JS profile field, set the field mapping here. Only Textbox or Textarea fields can pre-fill from JomSocial.

JS Profile Field: Land phone

Read Only: Yes Set to Yes if you do not want visitor to change the value. Note: Changes, if allowed, are never written back to JS. Changes are only stored in the ABPro booking.

Display Order: 1

Published: Yes

Notes: All text fields can accept a maximum of 255 characters.

Changes are only stored in the ABPro booking.

If you are using JomSocial and wish to populate an ABPro UDF field from a JS profile field, Only Textbox or Textarea fields can pre-fill from JomSocial.

JS Profile Field: Land phone

Read Only: ☐ Select a JS profile value. Do not want visitor to change the value. **never** written back to JS. ABPro booking.

Display Order:

Published: ☐

Notes: All text fields can contain up to 255 characters.

Appointment Booking Pro Ver. 1.4.4 - Copyright 2008-2009 - Soft Ventures, Inc.

Select the JomSocial Profile field from the dropdown list. This list is created from your JomSocial profile table and will only be populated if you have JomSocial installed.

You can also set the field to be read only if you do not want the person doing a booking to be able to change the values.

Note: Changes, if allowed, are **never written back to JomSocial**. Changes are only stored in the ABPro booking.

Overview

This is done by setting up ABPro UDFs (user defined fields) for your booking screen and telling ABPro to pre-fetch data for these fields from the user's Joomla Profile plug-in I profile.

You can assign this UDF to one or more resources, if NOT assigned, it will be shown for ALL.

Resources:

If you are using the Joomla Profile plug-in and wish to populate an ABPro UDF field from a Joomla profile field, set the field mapping here.
Only Textbox or Textarea fields can pre-fill from the Joomla Profile. NOTE: The plug-in must be enabled AND at least one user profile value entered or the list will show empty.

Joomla Profile plug-in Field:

Read Only: ☐ No ☐ Yes ☐ Set to Yes if you do not want visitor to change the value.
Note: Changes, if allowed, are never written back to JS.
Changes are only stored in the ABPro booking.

Set to Yes if you do not want visitor to change the value.
Note: Changes, if allowed, are never written back to the Joomla profile.
Changes are only stored in the ABPro booking.

CB Profile Field:

Read Only: ☐ No ☐ Yes ☐ Set to Yes if you do not want visitor to change the value.
Note: Changes, if allowed, are never written back to CB.
Changes are only stored in the ABPro booking.

If you are using JomSocial and wish to populate an ABPro UDF field from a JS profile field, set the field mapping here.
Only Textbox or Textarea fields can pre-fill from JomSocial.

JS Profile Field:

Select the Profile plug-in profile field from the dropdown list. This list is created from your Profile plug-in table and will only be populated if you have Profile plug-in enabled and at least one user's profile item added.

Note: Changes, if allowed, are **never written back to Joomla profile**. Changes are only stored in the ABPro booking.

How to setup Single Resource, Service or Category Modes

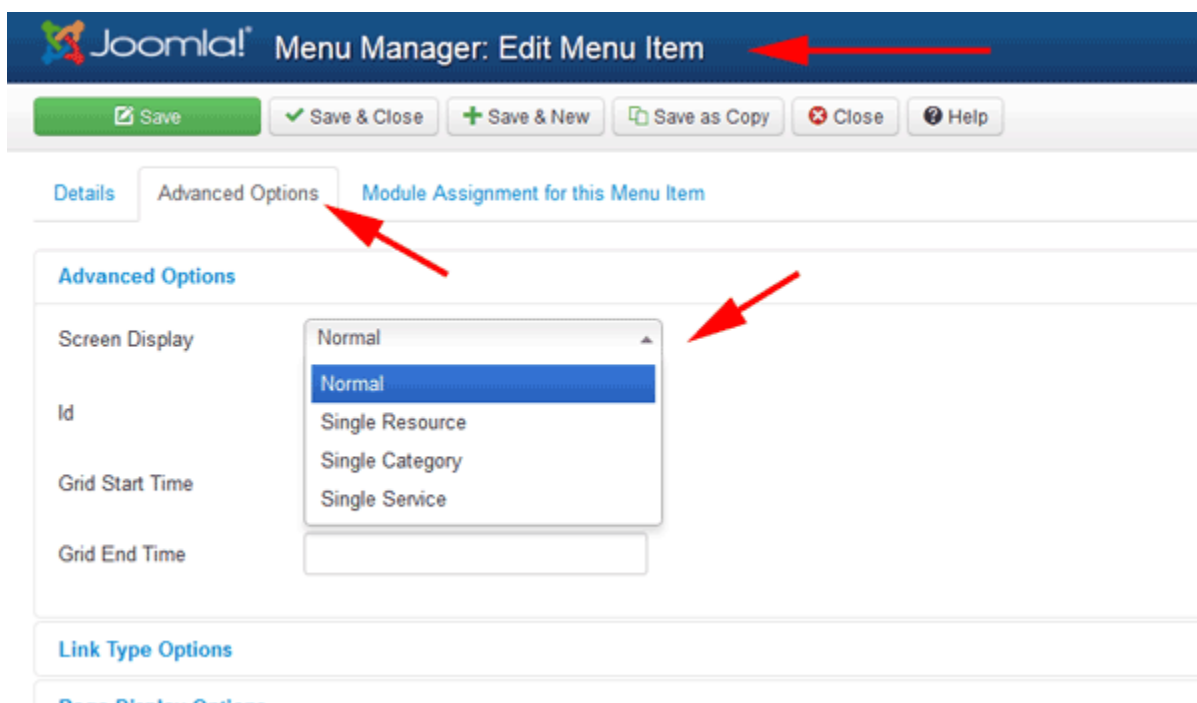

To set ABPro into single resource, single service or single category mode you need to be able to tell it what resource, service or category to display.

The booking screens support two methods of doing this.

1. Called by Menu
2. Called by URL

Called by Menu

When you create a menu item to call ABPro use 'Advanced Options' Screen.

Screen display can be set to Single Resource, Single Service or Single Category.

ID is the resource, service or category id that you want the booking screen to display.

These are only used for the public booking screens **DO NOT set these for the Front Desk menu item** or its bookings screen will encounter errors.

Called by URL

If you are calling from a content page, you can use a querystring parameter on the URL.

You simply take the URL and add '&res=x', '&srv=x' or '&cat=x' where x is the appropriate resource, service or category id.

A simple way to get the URL is make a menu that calls the screen you want (simple or GAD) then click on it. Take the URL that Joomla created and add "&res=123"

If using **SEO and ABPro 2.0.3 or above** you need a "?". See below.

An example URL would be:

http://YourSite.com/index.php?option=com_rsappt_pro2&view=bookingscreengad&Itemid=58&res=2

http://YourSite.com/index.php?option=com_rsappt_pro2&view=bookingscreengad&Itemid=58&cat=123

http://YourSite.com/index.php?option=com_rsappt_pro2&view=bookingscreengad&Itemid=58&srv=456

If using **SEO and ABPro 2.0.3 or above** you need a "?".

<http://appointmentbookingpro.com/appointment-booking-demo39.html?res=8>

<http://appointmentbookingpro.com/appointment-booking-demo39.html?cat=2>

<http://appointmentbookingpro.com/appointment-booking-demo39.html?srv=3>

QS parameters are not compatible with SEO and ABPro prior to 2.0.3.

Querystring parameters

Normally you would use the 'Configure' screen to set your GAD grid to open on; 'Today', 'Tomorrow', etc.

If you need to dynamically change that you can use a link from a content page and pass information telling ABPro how you want it to open. You can use querystring parameters to control *what date* the GAD screen opens on and also the *time range*.

A simple way to get the URL is make a menu that calls the screen you want (simple or GAD) then click on it. Take the URL that Joomla created and add the appropriate ending.

Mygridstarttime / mygridstarttime

You can call the booking screen via a URL with a querystring parameter tacked on the end, like:

/index.php?option=com_rsappt_pro2&view=bookingscreengad&Itemid=58&mygridstarttime=9:00&mygridendtime=13:00

This might be used where you want to open the grid only showing the morning in one case and only the afternoon in another.

If using **SEO and ABPro 2.0.3 or above** you need a "?".

<http://appointmentbookingpro.com/appointment-booking-demo39.html?mygridstarttime=9:00&mygridendtime=13:00>

QS parameters are not compatible with SEO and ABPro prior to 2.0.3.

mystartdate

You can call the booking screen via a URL with a querystring parameter tacked on the end, like:

/index.php?option=com_rsappt_pro2&view=bookingscreengad&Itemid=58&mystartdate=2009-09-14

This could be used if you were booking for events in the distant future and wanted a link for the event detail screen to the booking screen with the booking screen opening on the event date or week.

See the previous section for how to call specific resource or category via URL.

If using **SEO and ABPro 2.0.3 or above** you need a "?".

<http://appointmentbookingpro.com/appointment-booking-demo39.html?mystartdate=2012-09-14>

QS parameters are not compatible with SEO and ABPro prior to 2.0.3.

Menu parameters

You can set menu parameters to adjust the GAD grid start/end times. For ABPro 2.0 and above.

Multi-Language Operation

Overview

Version 1.4.5 is the International version with support for UTF-8, all elements (resources, categories, services, messages, etc) will support language file keys.

For example, rather than entering a confirmation message into the ABPro message box, you can enter a language file key. Create your confirmation message(s) in whatever language files you support and ABPro will send the language specific confirmation message

While ABPro does not support Joom!Fish, they can co-exist and work together nicely.

Limitations

- Admin messages are sent in language of admin side. An example of this would be if back-end Admin sets the booking to 'Accepted' the confirmation will go in whatever language the back-end Admin is running. In the case of auto-accept where the confirmation is generated at booking time, it goes in the current front-end language the user has selected.
- Date format is not changeable. Any expanded dates are translated (ex: mar. 15-déc.-2009) but the date picker fields will show YYYY-MM-DD format.
- Currency format does not adjust the ',' and '.' so all currencies show as ##,###.##. The currency symbol is set in the language file so it can be translated to \$, €, £, etc.
- Language changes by the user **may** need screen refresh. This is because ABPro uses many asynchronous AJAX calls and it is possible that immediately after a language change, if you are on an ABPro screen when doing the change, the screen may show part in the new language and part in the old. A refresh will clear this.

Windows Servers

Not supported on Windows servers.

From PHP docs: "If you are running PHP on a multithreaded server API like IIS or Apache on Windows, you may experience sudden changes in locale settings while a script is running"... that means **on windows servers** dates ~~may~~ will sometimes switch to English part way through the GAD grid.

For Windows servers (if you want to run in spite of the above warning) you will need to edit file **rsappt_pro14.php**

Find:

```
define("WINDOWS", false);
```

Change to:

```
//define("WINDOWS", false);
```

Using Language file Keys

ABPro uses Joomla's built in translation capabilities. When rendering text it checks to see if a language file entry has been defined for the text, if so it uses the language file text, if not it renders the text directly.

For example:

If you define the resource as "Boat", the screen will show "Boat"

If you define the resource as "RES_BOAT" and define keys in the language file like..

- In the English file: RES_BOAT=Boat
- In the French file: RES_BOAT=Bateau
- In the Spanish file: RES_BOAT=Lancha

The screen would display the appropriate translation depending on the user's choice of front-end language.

Resources, Categories, etc

Any entities you define to be show on screen can use language file keys. This would be resource, categories, services, extras, etc.

Example setting up a Resource:

For single language sites you can enter Resource name and description directly.

Resource Detail

A resource is who or what the appointment is being made for.
For example, an appointment to visit doctor or test drive a car. The resource would be the doctor or the car.

Resource ID: 2

Name: Boat

Description: Boat

This field is used in the booking screen dropdown list

Anyone Everyone

You can set wheather this resource is available to everyone or only

The screen will show..

Appointment Booking

Enter header text here - clear for no header

Your Name:

Phone:

Email:

Comments:

Resource: Boat

For **Multilanguage sites** you need to enter a language file key.

Resource Detail

A resource is who or what the appointment is being made for.
For example, an appointment to visit **doctor** or test drive a **car**. The resource would be the **doctor** or the **car**.

Resource ID: 2

Name: RESOURCE_BOAT

Description: RESOURCE_BOAT

This field is used in the booking screen dropdown list

Available ☐

You can set wheather this resource is available to everyone or only

In this case I made the key '**RESOURCE_BOAT**'.

You can define the key as **any text you like** with these limitations:

- All upper case
- No spaces
- Unique in ABPro.

Now in the language files you add translations for RESOURCE_BOAT..

```

Which yields (when Spanish is selected as front-end language)..

Haga una cita

Introduzca el texto de cabecera aquí - claro para no tener ninguno

Su nombre:

Teléfono:

Email:

Comentarios:

Escribe tu comentario aquí.

Recurso:

The same procedure is used to define multi-language services, categories, etc.

Messages

If you are running a single language site you can enter message text directly into the configure screen.

Component Configuration

Control Panel | Appointments | Categories | Resources | Services | Time Slots | Book-Offs | UDFs

Appointment Booking Configuration

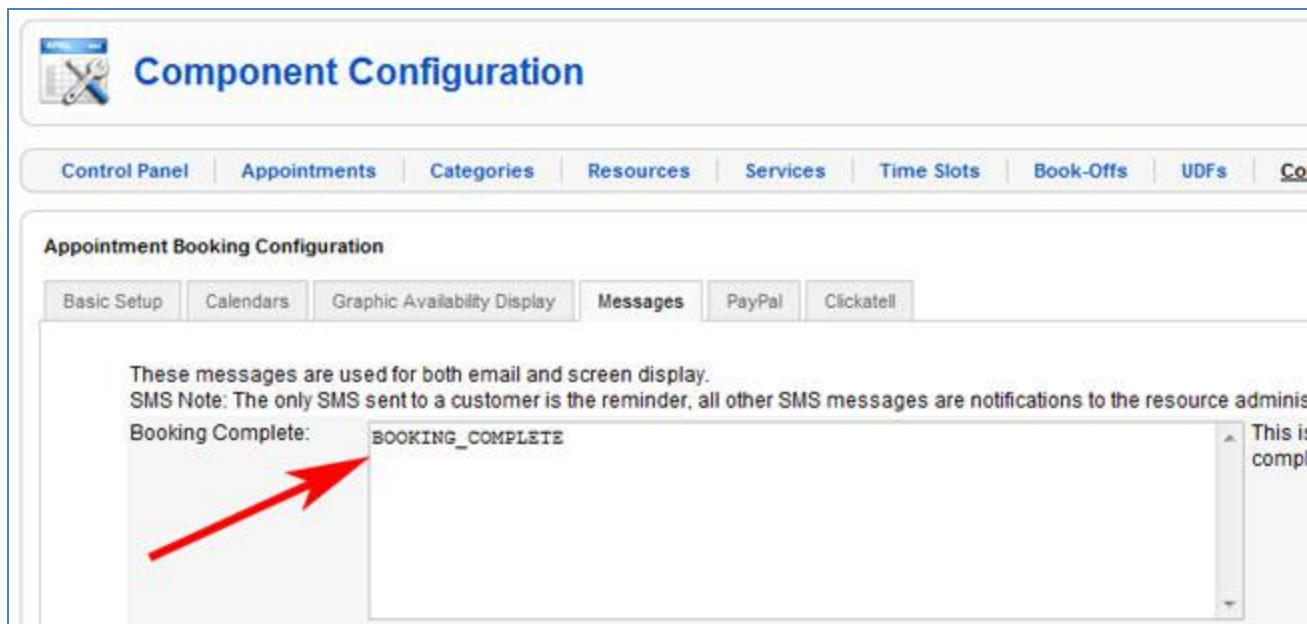

Basic Setup | Calendars | Graphic Availability Display | **Messages** | PayPal | Clickatell

These messages are used for both email and screen display.
SMS Note: The only SMS sent to a customer is the reminder, all other SMS messages are notifications to the resource administrator

Booking Complete:

```
<b>Thank you for your booking.</b>
<br><br><b>[resource]</b> has been booked for <b><i>[requester name]
</i></b> for this date/time:<br>
<b>[startdate] [starttime]</b><br>to <b>[enddate] [endtime]
</b><br><br>Your Cancellation ID is <b>[cancellation_id]</b><br>
To cancel your booking enter this code into the booking screen.
<br>Favorite Fruit = {Favourite Fruit}
<br>(You can put any of the captured information in the confirmation
```

For a multi-language site you can define a language file key..

And now add a BOOKING_COMPLETE key to each language file. (see below)

Note: In version 2.0 the edit boxes add extraneous characters so you need to wrap your key with "{svkey}"

Example:

```
{svkey}BOOKING_COMPLETE{svkey}
```

ABPro 2 will just take the value between the {svkey} tags and ignore formatting characters inserted by the editor.

Note the tokens are not translated. If you want to insert the user's selected service you use the normal token [resource_service]

For UDFs, Seats or Extras where the screen label is being translated, you use the key.

UDFs (User Defined Fields)

If you are running a single language site you can enter UDF text directly into the UDF setup screen.

User Defined Field Detail

This screen is used to create or edit User Defined Fields.

ID: 1

Screen Label: Pet's Name

Type: Textbox

Size: 30 (only applies if control type = Textbox)

Rows: 2 (only applies if control type = Textbox)

Columns: 40 (only applies if control type = Textbox)

Radio Buttons or List Items:

Comma separated radio button or dropdown list values, use "(d)" to indicate default selection. Example: "Apples, (d)Oranges, Bananas" MAX 255 characters

Required Field: No (only applies if control type = Textbox, Textarea or Checkbox)

Help Text: ^ Sample user defined field (UDF)

Tooltip: As many user defined fields as you want

You can assign this UDF to one or more resources. If NOT assigned, it will be shown for ALL

Here showing a UDF textbox with the screen text 'Pet's Name'.

For a multi-language site you can define a language file keys..

User Defined Field Detail

This screen is used to create or edit User Defined Fields.

ID: 1

Screen Label: UDF_COMMENTS

Type: Textarea

Size: 40 (only applies if control type = Textbox)

Rows: 2 (only applies if control type = Textbox)

Columns: 40 (only applies if control type = Textbox)

Radio Buttons or List Items:

Comma separated radio button or dropdown list values, use "(d)" to indicate default selection. Example: "Apples, (d)Oranges, Bananas" MAX 255 characters

Required Field: No (only applies if control type = Textbox, Textarea or Checkbox)

Help Text: UDF_COMMENTS_HELP

Tooltip: UDF_COMMENTS_TOOLTIP

You can assign this UDF to one or more resources. If NOT assigned, it will be shown for ALL

Here showing a textarea for comments.

Now add language file keys..

Using UDFs (User Defined Fields)

Overview

UDFs are primarily for capturing user input on the booking screen. There is special type of UDF call 'content' that can be used to present information to the customer. See 'Content' under 'Types of UDFs' below.

They typically solicit a customer's choice from lists or radio button, or allow text to be entered by the customer.

You can define tooltips to be shown when the customer moves their mouse over the UDF, and help text to appear below the UDF.

The screenshot shows an 'Appointment Booking' form. At the top is a header text '[Your header text here]'. Below it are input fields for 'Your Name:' (containing 'Joe User'), 'Phone:', 'Email:' (containing 'foo234@bar.com'), and 'Cell:'. A red arrow labeled 'UDFs' points to the 'Your Name' and 'Phone' fields. Below these is a 'Favourite Fruit:' section with radio buttons for 'Apples', 'Oranges' (selected), and 'Bananas'. A red arrow labeled 'Help text' points to the text 'Select your favourite' below the radio buttons. To the right of the radio buttons is a tooltip box that says 'Enter your cell phone here.' with a red arrow labeled 'Tooltip' pointing to it.

In the UDF setup screen (Control Panel | UDFs) ..

The screenshot shows the 'User Defined Field Detail: [Edit]' screen. It contains a form with the following fields and values:

- ID: 3
- Screen Label: Favourite Fruit
- Type: Radio Buttons
- Size: 40 (only applies if control type = Textbox or Textarea)
- Rows: 2 (only applies if control type = Textbox or Textarea)
- Columns: 40 (only applies if control type = Textbox or Textarea)
- Radio Buttons or List Items: Apples, (d)Oranges, Bananas
- Required Field: No
- Help Text: Select your favourite
- Tooltip: Select your favourite

Red arrows point to the 'Screen Label', 'Type', 'Radio Buttons or List Items', 'Help Text', and 'Tooltip' fields.

The UDF setup screen is where you define the screen label to be used and various parameters for your UDF. Some fields in the setup screen are only applicable to certain UDF types. See UDF Types below for details.

If you are running a multi-language site you can enter a language file KEY as the 'Screen Label' and ABPro will use the language file value on screen. See Multi-Language Operation in this guide for more details.

ABPro supports **any number of UDFs** on a booking screen.

With the flexibility of unlimited numbers come some limitations.

- The UDFs are processed by looping code and so cannot have specific treatment. That is to say if you have 3 textboxes you **can** control when order they appear in, but you **cannot** have special processing for one textbox. A textbox is a textbox is a textbox.
- Vertical lists only. A web page can grow longer quite easily. Growing wider is problematic. As such as you add more UDFs the screen gets longer. There is no facility to have UDFs appear in multiple columns. Radio Buttons can likewise only be displayed in vertical lists.
- UDFs are not stored as part of the core booking record, but reside in a separate table. This means you cannot easily include UDFs in listing screens like the My Bookings screen.

Types of UDFs

Textbox

The 'Size' field on the UDF setup screen is for Textboxes. This will determine the physical size of the box on the screen. All textboxes accept 255 characters of input.

A textbox can be designated as a required field. If the customer attempts to submit a booking without entering data into a 'required' textbox, validation will fail and block them from making their booking.

Textarea

A textarea is like a textbox but allows a larger screen presence. The 'Rows' and 'Columns' fields set the on-screen size. All textareas accept 255 characters of input.

A textarea can be designated as a required field. If the customer attempts to submit a booking without entering data into a 'required' textarea, validation will fail and block them from making their booking.

Radio button

To present a customer with a list of radio buttons, select 'Radio Buttons' type and provide a list of options in the 'Radio Buttons or List Items' box. You can specify a default item by putting "(d)" in front. See above.

One radio button is always selected so radio buttons cannot be 'required' fields.

Dropdown List

To present a customer with a dropdown list from which to choose, select the 'Dropdown List' this type and provide a list of options in the 'Radio Buttons or List Items' box. You can specify a default item by putting "(d)" in front. See above.

One radio button is always selected so radio buttons cannot be 'required' fields.

Checkbox

The Checkbox type provides a simple checkbox for the customer to check. This can be a required field.

Content

The Content type is different than all the others in that it is intended to **provide information TO the customer** rather than capturing information from them.

Example, setting..

ID:	13
Screen Label:	Directions
Type:	Content
Size:	40 (only applies if control type = Textbox or Textarea)
Rows:	2 (only applies if control type = Textbox or Textarea)
Columns:	40 (only applies if control type = Textbox or Textarea)
Radio Buttons or List Items:	 Comma separated radio button or dropdown list values, use '(d)' to indicate default selection. Example: 'Apples, (d)Oranges, Bananas', MAX 255 characters
Required Field:	No (only applies if control type = Textbox, Textarea or Checkbox)
Help Text:	
Tooltip:	
Text for 'Content' UDF type:	You can't get there from here.
Show on Booking Screen:	Yes

Yields..

Appointment Booking

[Your header text here]

Your Name:

Phone:

Email:

Cell:

Favourite Fruit:
☐ Apples
☒ Oranges
☐ Bananas
Select your favourite

Directions: You can't get there from here.

The text you place in the content UDF can be HTML so you can have rudimentary formatting like color and bolding. You can create a content UDF with a local image tag also.

Tooltip:

Text for 'Content' UDF type: ``

Show on Booking Screen: Yes

Favourite Fruit: ☐ Apples ☒ Oranges ☐ Bananas

Select your favourite

Directions: You can't get there from here.

Image: 

Information: Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut sed enim tortor, vel interdum libero. Quisque lectus non tellus tristique aliquet sit amet ut lectus. Duis convallis, massa eu hendrerit accumsan, neque luctus vulputate tellus, non interdum ante turpis eu felis. Nunc aliquet metus eu erat auctor interdum. Cras ut diam

Images CANNOT be included in the confirmation email.

Resource Specific UDFs

UDFs can be either common for all resources or resource specific to one or more resources.

Common resources appear ABOVE the resource whereas resource specific UDFs appear BELOW the resource AFTER the resource is selected.

Favourite Fruit: ☐ Apples ☒ Oranges ☐ Bananas

Select your favourite

Directions: You can't get there from here.

Resource: Dr Bar - \$10 per hour + tax

Services: 60 Minute

Image: 

NON-Resource Specific UDFs

Resource Specific UDF

By default all new UDFs are NON-Resource Specific so they will appear on all booking screens.

To make a UDF only appear for certain resources, add the resources to the right box. In the example below the UDF will only display for resources 'Dr Bar' and 'Nudder Resource'.

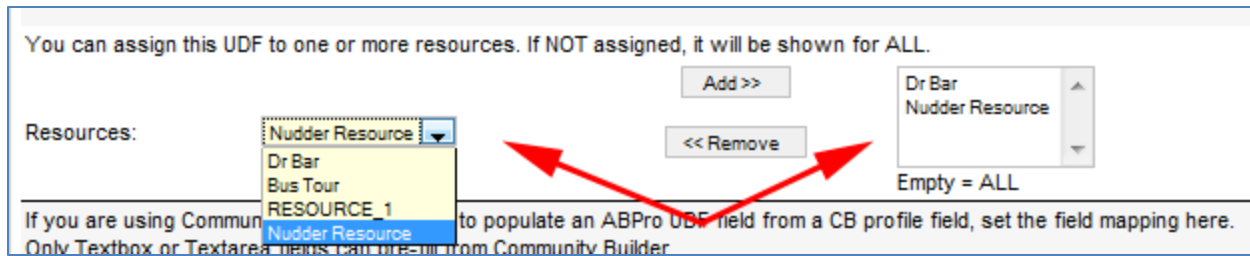

You can assign this UDF to one or more resources. If NOT assigned, it will be shown for ALL.

Resources:

Dr Bar
Nudder Resource

Empty = ALL

If you are using Community Builder to populate an ABPro UDF field from a CB profile field, set the field mapping here.
Only Textbox or Textarea fields can be used from Community Builder

Mapping a UDF to Community Builder, JomSocial or Joomla's Profile plug-in

ABPro has the ability to fetch user profile data from Community Builder, JomSocial or Joomla's Profile plug-in.

This is intended to save the customers typing.

For example, if they have a CB of JS profile that contains 'Cell Phone' and you want that captured in the booking you can create a UDF called 'Cell Phone' and map it to the CB or JS data. Assuming you have CB or JS installed.

You can also set whether the mapped value can be edited in the booking screen or not. Note, changes to the mapped value will only be changed in the booking record.

ABPro NEVER changes data in CB, JS or Joomla profile.

If you are using the Joomla Profile plug-in and wish to populate an ABPro UDF field from a Joomla profile field, set the field mapping here.
Only Textbox or Textarea fields can pre-fill from the Joomla Profile. NOTE: The plug-in must be enabled AND at least one user profile value entered or the list will show empty.

Joomla Profile plug-in Field:

Read Only: ☐ No ☐ Yes Set to Yes if you do not want visitor to change the value.
Note: Changes, if allowed, are never written back to JS.
Changes are only stored in the ABPro booking.

Set to Yes if you do not want visitor to change the value.
Note: Changes, if allowed, are never written back to the Joomla profile.
Changes are only stored in the ABPro booking.

CB Profile Field:

Read Only: ☐ No ☐ Yes Set to Yes if you do not want visitor to change the value.
Note: Changes, if allowed, are never written back to CB.
Changes are only stored in the ABPro booking.

If you are using JomSocial and wish to populate an ABPro UDF field from a JS profile field, set the field mapping here.
Only Textbox or Textarea fields can pre-fill from JomSocial.

JS Profile Field:

Read Only: ☐ No ☐ Yes Set to Yes if you do not want visitor to change the value.
Note: Changes, if allowed, are never written back to JS.
Changes are only stored in the ABPro booking.

Using UDFs to tailor the customer confirmation message

Any UDF data, either captured from the customer or presented via content UDFs, can be included in the confirmation email message via ABPro's token system.

The Token system

The idea of the token system is that you can create a common confirmation message, in the Configuration screen, messages tab, and include tokens that will be swapped at runtime for the appropriate data. The token system is discussed in other parts of this guide pertaining to the confirmation message.

In the case of UDFs the token is the screen label inside [].

For example:

1. If your screen label is 'Directions' and you place the token '[Directions]' into your message, ABPro will substitute the content you place in the UDF for the token.
2. If your screen label was 'Cell Phone' and you place the token '[Cell Phone]' into you message, ABPro will substitute the value the customer entered as his cell phone in place of the token.

Note!!

You must ensure **your UDF token names do not conflict with any built in tokens** or unpredictable results will arise. Built in token names can be found on the Configure screen, messages tab, at the bottom of the screen.

Common Content

If you have content you wish added to all booking screens, such as terms and conditions, you could create a 'content' type UDF that is NON-resource specific. If you called it 'Terms'. This would show on all booking screens.

If you now add '[Terms]' in the confirmation message, the terms would also be added to the confirmation email message.

Resource Specific Content

If you have content you wish added to only certain booking screens, such as resource specific information, you could create a 'content' type UDF that IS resource specific. If you called it 'Resource Info', this would only show on booking screens where the appropriate resource was selected by the customer.

If you now add '[Resource Info]' in the confirmation message, the content text would only be added to the confirmation email message when the appropriate resource is booked.

Token only Content

In some cases you may wish to have common or resource specific text added to the confirmation email but NOT shown on the booking screen.

To do this set 'Show on Booking Screen' = No when creating a content type UDF.

Now the booking screen will NOT show the content text for this UDF, however if you include a token for it the text WILL be added to the confirmation email.

Using the Front Desk

The Front Desk view was designed for **staff** to see and manage upcoming bookings. It was a STAFF ONLY screen that had a lot of power.

With ABPro 2.0.1 the roll of the Front Desk was expanded such that it could also be used as a **public** screen showing a calendar view of existing bookings.

Use CAUTION when setting up a public Front Desk screen as ABPro cannot dictate what power you want the public to have, it is up to you. The following section details each setting available in the menu setup screen.

You can have multiple menu items calling the Front Desk screen with different capabilities if you like.

For basic setup information see previous section in the guide 'Front End Screens', subsection 'Front Desk'

Overview

For basic setup information see previous section in the guide 'Front End Screens', subsection 'Front Desk'

This section of the guide covers configuring the Front Desk view from the menu setup.

Many of the Front Desk's capabilities can be turned on or off via the menu setup.

NOTE: ABPro cannot control who you make the Front Desk available to. There are some options you should NEVER let the public have access to. It is **your responsibility to not enable sensitive booking information** on a screen that you show the public.

Menu Setup

▼ Parameters (Basic)

13:00 John Doe	
17	18

13:00-14:00 Bus Tour

Resource Admin Only

Yes/No

As stated previously the Front Desk was for staff to manage bookings. To support the idea of one user managing some resources and another user managing different resources the operator could **only see bookings for resources they were assigned as resource admin for**. This was also good if the resources were different companies and you did not want staff from company A seeing bookings for company B.

Yes = The operator will **only** see bookings for resources that they are **assigned as resource admin**. Setting a resource's administrators is done in the resource setup screen near the bottom.

No = The operator will see bookings for all resources.

Login Required

Yes/No

Yes = the user must be logged in.

No = User need not be logged in.

Use with caution to ensure non-logged in visitor does not get staff level access.

Login Required = No should **ONLY** be used with **View Only** = Yes.

View Only

Yes/No

Yes = Front desk will be read-only, no changes can be allowed. Also some action controls will be hidden.

Any time a Front Desk screen is made available to the public it should be on View Only mode.

Never give the **public access** to a Front Desk with **View Only** = No.

If you wish, you can allow the Front Desk booking links to display some or all the booking details. See *Show Booking Details* below.

Edit Status Only

Yes/No

Yes = The booking detail edit screen will display with all data read-only except the booking status. This would be used if you only want staff to be able to change booking status.

Public booking screen calls the standard GAD booking screen.

None = no 'New Booking' link is displayed.

Using Rate Overrides

Rate Overrides is an **optional** feature allowing you to define special rates charged based on what Joomla Group a customer is assigned to. These overrides can be applied to resource(s), service(s), extra(s) or seat type(s).

Initial rate setup is done in the respective entity's setup screen. For example, the resource rate is set in the resource setup screen.

Rates set here override those rates so you can do things like, offer a different rate for registered users or users assigned to specific Joomla Groups.

Before setting up an override rate, you should be aware of ABPro's order of preference in different types of rates.

Order of Precedence

Service rate has precedence over *resource* rate. If you define both, the service rate is used.

Seat price has precedence over both *resource* and *service* rates.

The Override rates **do not** compromise this order of precedence.

For example, if you define an override rate for a Resource but you have a Service rate, the Service rate it used.

See section 'Control Panel' subsection 'Rate Adjustments

Rate Adjustments is an optional feature that allows you to adjust a resource rate based on day, time or day and time. This allows you to charge a premium for some bookings and a discount for others.

This screen allows you to define rate adjustments for a resource. Initial rate setup is done in the resource setup screen. Adjustments here are **added** to the base rate. For more information see ABPro User's Guide section 'Using Rate Adjustments'

ID	Resource	By	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Start	End	Adjustment	Unit	Published
1	Dr Bar	DayAndTime				Yes				13:00	16:00	10.00	Percent	
2	Bus Tour	DayOnly		Yes						00:00	00:00	10.00	Flat	

Appointment Booking Pro Ver. 3.0.5 - Copyright 2008-2014 - Soft Ventures, Inc.

By: Shows when the discount applies.

- DayOnly = The adjustment applies to all bookings in the day(s) specified, regardless of time.
- TimeOnly = The adjustment applies to all bookings in a specified time range, regardless of day.
- DayAndTime = The adjustment applies to specified day(s) in specified time ranges only.

Sun-Sat: Days to be used in adjustment determination.

Start / End: Time range to be used in adjustment determination.

Adjustment: The amount to adjust the rate by. Can be (+) or (-), flat rate or percentage of rate.

Click on the ID to open the detail screen.

Rate Overrides for how to setup Rate Overrides

Example:

In this example we will setup a resource rate for the public, then create a Rate Override for 'Registered' users.

In the Resource setup screen..

dropdown list for the customer.

Rate: Rate Unit:

Rate is used by the Payment Processor implementation. Rate is the amount you charge as a decimal number. This is used by the system to calculate total charge for PayPal.
o per Hour = calculate costs as rate x hours
o per Booking = flat rate charge per booking

Add Rate Override..

Joomla! ABPro - Rate Overrides: [NEW]

This screen allows you to define rate overrides for resource, service, extra or seats type. Initial rate setup is done in the respective setup screen. For more information see ABPro User's Guide section 'Using Rate Overrides'

ID: 0

Type:

Name:

Group: Select the Joomla Group that this override applies to. When a logged in user is in this group they will get the rate here. Note: If the user is assigned to multiple groups with overrides, the lowest rate is given to the user.

Rate:

Published:

Booking screen for non-logged in user..

Resource Rate	Hours	Total Owing
\$ 10.70	1.00	\$ 10.70
Extras :		
Discount:		(0.00)
Total Owing:		\$ 10.70

Booking screen when logged in..

Resource Rate	Hours	Total Owing
\$ 9.50	1.00	\$ 9.50
Extras :		0.00
Discount:		(0.00)
Total Owing:		\$ 9.50
